Arab states freeze | Parliamentary vote next week could lead to general election

India in political crisis as Congress blow hits coalition

By Mark Nicholson in New Delhi

India's minority coalition government was last night given 10 days to fight for its political life after the surprise decision of the Congress party to withdraw its support, pitching India into a political crisis. Mr Shankar Dayal Sharma, the Indian president, insisted that the diverse 13-party United Front coalition led by prime minister Mr H.D. Deve Gowda's government face a parliamentary vote on April 11. This could lead to a fresh general election just 10 months

after the formation of the UF.
The decision by Mr Sitaram Kesri, the 78-year-old Congress president, to withdraw support from the UF shocked even some of his semior party colleagues and has been scathingly received by the Indian

Congress, which has governed India for all but four years since independence, was not part of the coalition but backed it in parliamentary votes - it has 142 MPs while the UF has 176 in the 543-seat

The move rocked business confidence, which had revived

aggressive tax-cutting budget in February. Bombay shares plunged 9 per cent, with the Bombay Sensex index closing 299.63 down at 3,363,90. The Congress decision leaves

the budget in limbo - parliament was to convene on April 21 to debate the Finance Bill. Mr Kesri accused the UF of presiding over a "complete col-lapse" of law and order, economic "drift", rising prices and a "growing communal men-

Leap into the unknownPage 5 Markets this week. ...Page 27Page 35 World stocks ...

- an allusion to the

recent formation of a coalition government in the state of Uttar Pradesh which includes the religion-based Bharatiya Janata party. Mr Jaipal Reddy, UF spokes-

man, called on Congress to "reconsider" its move, but indicated efforts were under way to preserve the government, saying coalition leaders were in talks with "friends" in Congress. He said the coalition was "confident of surmounting the situation".

"spell out the basis of our con- "friendly and co-operative".

would survive. However, the UF is apparently hoping to capitalise on anger among some Congress leaders over Mr Kesri's surprise gambit and an aversion among Congress MPs to a snap election in which polls suggest the party would fare poorly.

One senior Congress politician said he expected "something will work out" before a confidence vote is called.

The opposition Bharatiya Janata party and its supporters - a total of 203 MPs - said they would vote against the UF and force elections, which recent opinion polls suggest could hand them a governing majority.

Mr Gowda insisted that the UF would "fight it out" in parliament. All 13 members of the coalition have pledged continued lovalty to the government. The political turmoil over-

shadowed talks in Delhi between India and Pakistan's foreign office bureaucrats, the first such high-level talks between the two hostile nations in three years. Mr Salman Haider, India's foreign secretary, said the officials had "been able to continue" their Mr Reddy said he could not talks, which he described as

Indian prime minister H.D Deve Gowda's minority coalition government faces the possibility of a general election after the

France **Telecom** considers employee share plan By David Owen

France Telecom may institute a share option plan for up to 1,500 senior employees after its partial privatisation next month. The plan would be one of the widest options scheme among French companies.

Mr Michel Bon, France Telecom chairman, is promoting the plan, which could be implemented towards the end of this year. He views it as an important element in changing the company from a civil service operation into a more customer-oriented company.

Details of the option scheme will not be decided until after the FFr30bn-FFr50bn (\$5.3bn-\$8.9bn) flotation because the government aims to sell a large portion of the shares to employees as well as outside investors. Mr Bon believes launching the option scheme at the same time would be con-

Executive share option schemes have rapidly gained popularity in France over the past few years, partly for tax reasons. According to Mr Edoardo De Martino, a partner of accountants Arthur Andersen in Paris, schemes covering 1.2 per cent of employees are "within the range of common practice".

The sale of a first tranche of France Telecom share is on course to be France's biggest privatisation since Elf Aquitaine, the oil group, in 1994. and possibly the biggest ever. Mr Bon hopes the issue will attract_about 2m shareholders.

The sale could reignite popular capitalism in France and restore the credibility of the government's amhitious privatisation programme, which has suffered a number of setbacks, notably last year's suspension of the planned sale of the Thomson electronics group.

to start on May 6. The shares are expected to start trading on the Paris and New York stock markets on June 9. The formal selling period should run from May 27 to June 2

NCB crisis deepens with president set to resign

By Gwen Robinson in Tokyo

The crisis at Nippon Credit Bank, one of Japan's top 20 banks, deepened yesterday with reports that Mr Hiroshi Kubota, its president, will resign this month.

NCB, which is struggling to clear bad loans of more than Y1,000bn (\$8.1bn), last week confirmed it was finalising a radical restructuring plan. The plan, to be amount

shortly, is likely to include the bank's withdrawal from overseas operations. This will mean the closure of six overseas branches and eight repre-sentative offices, as well as drastic staff cuts and the sale of key property holdings in

The reports follow attempts on Friday by Mr Hiroshi Mitsuzuka, finance minister, to calm concerns about the stability of the Japanese banking

Mr Mitsuzuka said the govrnment would help NCB with believed to be arranging a rescue package under which the Bank of Japan, the central bank, would provide nearly one-third of a Y300bn finan-

cial support package. Mr Mitsuzuka described NCB's restructuring efforts as "important for the stability of the entire financial system" and said BoJ and the government would "formally support" the plan.

Reports that the government has approached leading mercial banks to assist NCB's restructuring plans drove down banking on the Tokyo stock market last Thursday. NCB shares fell 6 per cent. Yesterday, they fell a further Y9 to close at Y280 on concerns that the restructuring measures may be too

Mr Kubota, who is also chairman of NCB, will resign as president after an official

financial support to increase announcement of the bank's its capital. The ministry is restructuring plan within the chairman, but his departure from the presidency may shake investors' confidence. His replacement is expected to come from within NCB, according to bank officials.

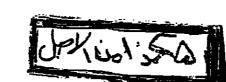

A former senior official of the finance ministry, Mr Kubota joined NCB as an adviser in 1993. He became president and chairman in mid-1996 and immediately began tackling the bank's massive had debt problems.

NCB's liquidity problems have been highlighted in the last few months as yields on its five-year debentures, the key fund-raising instruments soared more than 2.5 percentage points above those issued by Industrial Bank of Japan the leading long-term credit

Last curbs on EU airlines are lifted, but few expect rush to start new services

European Union finally frees its skies

The European Union today completes the liberalisation of its aviation market, concluding a process which began a decade ago.

From today, European airlines will see the last restriction on their operations within the EU removed, leaving them free to operate domestic services in countries other than their own. This freedom comes on top but says this will be difficult

measures taken by the EU since it began easing controls on air fares in 1967.

Airline executives say, however, that few companies are likely to start domestic services in other countries. They point out that British Airways, Europe's most profitable carrier, has yet to make money from its French and German operations. Ryanair, the independent Irish carrier, has launched

ation sector. The EU began liberalising domestic services in the UK. its industry almost a decade

S Korea spurs investment

INTERNATIONAL NEWS DIGEST

South Korea will increase the foreign investment ceiling in listed companies by 3 percentage points to 23 per cent from May 1 in an effort to boost the Seoul bourse, one of Asia's worst performing over the past 18 months. The general share index yesterday rose 1.5 per cent in response. The limit is due to rise by 3 points annually between 1997 and 1999, and disappear in 2000. Finance ministry officials suggested the limit might rise another 3 or 3 points later this year if needed to boost the market. Stricter foreign shareholding limits for public

corporations, such as Korea Electric Power (Kepco) and Pohang Iron & Steel, will be increased by 3 points to 18 per cent, while that for individual foreign investors in a listed company will go up 1 point to 6 per cent. Restrictions on overseas borrowing by foreign manufacturers in South Korea will be removed, and foreigners will be allowed to invest in South Korean venture capital companies. State-run banks will increase their foreign loans, while Kepco will seek \$1bn in overseas funds by issuing bonds in the US and Europe.

South Korea yesterday lifted a ban on private bodies providing rice to North Korea, in a sign of a conciliatory policy toward its starving neighbour. John Burton, Seoul World Stocks, Page 35

US incomes jump 0.9%

US personal incomes jumped in February by 0.9 per cent, the fastest rate in eight months. The Commerce Department figures provide tresh evidence of rapid economic growth. While the surge exceeded market forecasts, the gain in personal consumption was slightly below expectations at 0.3 per cent.

Personal saving as a percentage of disposable income inched upwards to 5.5 per cent from 5.1 per cent in January. However, the impression of a powerful expansionary trend was reinforced by the upward revision of spending and incomes data for January. Personal income was reported to have risen in the month by 0.4 per cent, against a previous estimate of 0.3 per cent, and personal consumption expenditures, in current dollars, were said yesterday to have jumped 1 per cent,

compared with a previous report of 0.7 per cent. Economists said the new data suggested a first-quarter leap in consumer spending of as much as 5 per cent. However, Ms Cheryl Katz, senior economist at Merrill Lynch, predicted it would ease dramatically in the second quarter, as special factors such as an unusually mild winter ceased to have an effect. Bruce Clark, Washington

Talks on S China Sea dispute China has agreed to a Vietnamese proposal for talks to settle a territorial dispute in the South China Sea, ending

two weeks of diplomatic stalemate, a foreign ministry statement said yesterday. The row erupted when Hanoi protested about the

presence of a Chinese oil rig in waters off the Vietnamese coast which it said were in Vietnam's "exclusive economic zone". Beijing insisted the rig was exploring in Chinese territory. The dispute is the worst since the two former enemies normalised relations in 1991. Vietnam's foreign minister, Mr Nguyen Manh Cam, said

resterday he hoped the two sides would meet in Hanol this week. However, diplomats pointed out that, by apparently agreeing to talk. China might just be buying time for further exploration work, as well as silencing further Vietnamese protests.

Erbakan given more time

Turkey's military-dominated National Security Council yesterday gave Mr Necmettin Erbakan, prime minister (pictured above right with deputy Tansu Ciller), another month to implement measures limiting the growth of Islamic schools and organisations. The military-dominated council issued the Islamist-led

government with list of 18 "recommendations" at its last monthly meeting in February, warning of unspecified sanctions" if they were not carried out. The council did not refer to the issue in a brief

statement after the meeting. But Mr. Zülfikar Doğan, of the newspaper Milliyet, which has close ties to the military, commented: "The military will only underline the [need to heed the] decisions. They are planning to discuss their application at next month's meeting. If nothing has happened, the military will make a tougher statement and urge rapid [action]." If necessary, the military would act to break up the government. ■ Turkey's economy grew 7.9 per cent last year, after expanding by 7.3 per cent in 1996. However, economists say loose fiscal and monetary government policies are

Israel Chemicals stake sold

The Israel Corporation, a large Israeli investment company, has paid the government Shk667m (\$198m) for an extra 17 per cent of Israel Chemicals, a leading chemicals group.

The sale was the first important privatisation move this

year for a government pledged to sell off rapidly its extensive holdings in Israeli companies and banks. It came just days after the death of Mr Saul Eisenberg, the chairman of both companies. The Israel Corp held an oution to purchase the shares after acquiring 25 per cent in 1995. The state now has 31.5 per cent of the company: 25 per cent more are held by the public.

Israel Chemicals last week reported net profits of \$69m on revenues of \$1.63bn in 1996 after Mr Risenberg's successful restructuring programme. This followed a loss of \$25m the year before. Avi Machlis, Jerusalet Eisenberg obitnary, facing page

Belgian arms bribes charge

Mr Guy Spitaels, former leader of the Socialist party in Belgium's francophone south, has confirmed that he has been indicted on bribery charges. The charges relate to allegations that the party, the second biggest group in --Belgium's Christian Democrat-led government, accepted bribes in the late 1980s from arms companies in return for lucrative government contracts.

Mr Spitaels is one of the most influential Belgian politicians to have been implicated in a series of scandals that has seriously damaged the standing of the Socialist. party. The charges of "passive corruption" have been made in connection with allegations that the party took bribes from the French aircraft maker Dassault in return for a contract to modernise the Belgian air force. In 1994 Mr Spitaels resigned as leader of Wallonia's regional government when he was named in another bribes scandal involving the Italian defence company

OECD faces investment accord delay

By Guy de Jonquières

The world's richest nations have abandoned hopes of agreeing by early summer comprehensive rules for foreign direct investment and say they may be unable to reach a deal before the end of the year.

The accord, which would commit signatories to liberalising and guaranteeing fair treatment of inward investment, has been under negotiation since 1995 in the Parisbased Organisation for Economic Co-operation and Development

Ministers from the OECD's 29 members had aimed to sign the agreement at their annual meeting in late May. EU to extend uncondition-But negotiators say the talks have proven much more complex than expected, and take several more months.

The biggest stumbling demands. block is how to deal with reservations submitted by OECD members which want to exempt specified sectors of their economies from the

The number and scope of reservations tabled by gov- by a binding disputes mechaernments vary widely, mak- nisn

a balanced deal.

Negotiators have also yet to agree how far the accord should cover tax issues and financial services, and how it should deal with extraterritorial legislation, such as the US Helms-Burton anti-Cuba law.

Officials say conclusion of an OECD investment agreement may have to await res olution of an international dispute over Helms-Burton which the European Union is challenging in the World Trade Organisation.

Another problem in the OECD talks is pressure by some governments on the ally to all countries investment liberalisation measures taken as part of its single resolving differences will market programme. EU members are resisting these

OECD members have broadly agreed that the accord should cover some types of portfolio in-vestment, including public debt, as well as direct investment. It would be enforced

The US electricity sector is leaping from monopoly to competition

Power industry enters market wilight

market confronts the nation's power utilities with an uncomfortable choice.

According to Mr Bob Anclien, a partner at Ander-sen Consulting, their predicament is like that of an inexperienced sailor with one foot in a departing boat and one foot on the pier.

For the protected power monopolies, accustomed only to managing assets and the demands of regulators. and with no experience of competition or marketing. "it comes down to a decision of when to shift their weight", says Mr Anclien. "Deregulation confronts

the industry with decisions it has never had to make before, and the dilemma is compounded by a schizophrenic tendency. They are still living in a regulated world which they cannot abandon. But at the same time they are having to prepare for a competitive future." he says.

That future, according to Mr Jeffrey Skilling, president of the Enron energy group, is much closer and much tougher than many experience is likely to be believe. He says market more akin to a "big bang".

forces will quickly gain the upper hand once unleashed next year.

Trend-setting California will switch to a free-market system on January 1, with Massachusetts. Pennsylvania and Rhode Island expected to follow.

"Regulated structures cannot compete in a merchant business," Mr Skilling told an Andersen-sponsored conence recently. "I predict that in four years more than 50 per cent of end-user markets will be open to thirdparty suppliers."

Although the speed of deregulation, proceeding on a state-by-state basis, still seems uncertain, there is a among the thousands of electricity concerns which share annual revenues of about Following the UK free-

into three sectors: generation, distribution and retail-But unlike Britain, where the free market was introduced in a controlled, eightyear phased process, the US

market model, existing utili-

ties are expected to divide

Power industry must generate a competitive edge Anny

For the early stages, Mr (it controls 17 per cent of US Skilling predicted a "bru-natural gas distribution and tally competitive" environ-

Recalling the "chaos" in the gas industry in the mid-1980s, after gas markets were ed up, Mr Skilling said falling prices and profits destroyed the credit rating of the industry, forced Enron to slash costs more than 70 per cent, and saw the departure of all but a handful of the

company's top management. Mr Skilling, whose company has emerged as a front-runner in exploiting domestic and international gas and electricity markets has a declared goal of 15 per cent of power sales) has a vested interest in unnerving his competitors.

However, early experiences with limited pilot deregulation schemes have provided startling glimpses of the future: 30 would-be electricity sellers converged last year on a small patch of the territory once monopolised by Public Service of

New Hampshire. where 11 of the 12 original regional electricity companies have been taken over. vice-preside. operations

inois utility ... i. claused 3 per cent .aid competitors had already opened offices on his territory. Even though ComEd's market was still regulated

and its monopoly was still protected, preparations for change were well advanced. In the past two years it had built a 45-strong trading team, led by a Wall Street professional, to buy and sell power in the spot market

t had developed a separate service division to tend the 2,500 large industrial and commercial customers which account for a third of its revenues prime targets for raiders. The group's basic offering

of power had been enhanced with new services and products including energy audits. management systems and indoor air quality controls. The company was still striving to convince unions

move on quickly from the 'entitlements" of today's regulated environment. But instilling a sense of urgency

A sense of crisis was nec-essary, he said. "Otherwise the organisation simply won't move."

The \$70bn-worth of energy industry mergers and acqui sitions in the US last year testify to accelerating consolidation which is increasing the pressure on tradi-tional utilities to adapt to the new environment.

On the other hand, suggested an Andersen executive, Mr Hawk McIntosh, there could also be extraordinary opportunities for established consumer marketing companies to forge alliance with the new-age utilities and add electricity to their expanding range of products and services.

It might only be a matter of time, he said, before the likes of Microsoft, Citibank. Merrill Lynch, AT&T telecoms or even the L.L. Bean mail order retailer joined the cruise into the future of the US energy industry.

OBITUARY: SAUL EISENBERG

Industrialist who helped Israel open the road to China

Mr Saul Eisenberg, the Israeli billionaire entrepreneur and shrewd dealmaker, who died in Beijing last week of a heart attack at the age of 76, was widely known for his extensive trade and investment operations in the Far East, especially in China, where he conducted business for two decades. With a network of political

and business connections in China and Israel, Mr Eisenberg facilitated relations between the People's Republic and Israel, and later helped the two forge diplomatic relations.

He was also involved in the sale of Israeli arms and military know-how to China during the 1980s.

As president of United Development Incorporated (UDD) one of the biggest foreign traders with China, he was active in fields ranging from high technology to transport and toys.

UDI was involved in the supply of equipment to more than 280 factories in China since 1978 and maintained 14 offices throughout the coun-

"The sudden death of Saul Eisenberg saddened me greatly," said Mr Shimon Peres, the former Israeli prime minister and a close

"Israel has lost an out-standing industrialist, whose contributions to its economy, foreign relations and especially in opening the road to China, will be credited to him for ever."

Born in Munich in 1921, Mr Eisenberg fled Nazi Germany in 1938 and wandered virtually penniless through Europe.

He eventually settled in Japan, where in the early 1940s he established his first combany. The Tokyo-based Eisen-

berg and Co profited from involvement in rebuilding Japan after the second world In 1968, Mr Eisenberg agreed to move to Israel ~ on

one condition: that this would not force him to pay

Chips are down as EU acts on dumping

Brussels attempts to balance the need to preserve a viable domestic industry and the interests of D-Ram users

ne of the European Union's largest and most sensitive antidumping cases enters a new phase today when minimum prices are reimposed on imports of the biggest-selling semiconductor chips from 14 Japanese and South Korean manufacturers.

Dynamic Random Access Memory chips - D-Rams are the basic building block for every kind of intelligent electronic device from video recorders to personal computers. The EU market is Ecu5bn (\$5.76bn) a year, of which Japan and South Korea have 80 per cent.

The European Commission was due to reintroduce minimum prices on March 10, after a 21-month suspension. but gave manufacturers a three-week grace period to avoid turmoil in a market where prices have fallen 80 per cent worldwide.

That period ends today, with minimum prices to be reintroduced in stages up to

EU users of the components warn that their costs will spiral, while some Japanese and Korean producers have threatened to withdraw supplies if the antidumping measures are reim-

@ Jane/July 97: EU compi

are awaiting completion of a review of the measures. which could decide to modify them.

The heart of the problem is the need to balance the strategic importance of preserving a viable European D-Ram manufacturing industry, and the interests of manufacturers which use the

In the late 1980s, the Commission investigated a complaint from European manufacturers Siemens, Motorola, Users and manufacturers and Texas Instruments.

It found that by selling chips at often below-cost prices, Japan had increased its European market share from 25 per cent in 1983 to more than 70 per cent.

In 1990, the Commission imposed minimum EU selling prices on Toshiba, NEC, Hitachi, Mitsubishi, Fujitsu, Matsushita, Sharp, Uki, Sanvo. Minebea, and - ironically, since its European arm was a complainant - Texas Instruments Japan.

Manufacturers undertook to supply quarterly costs and sales data - verified by Commission spot checks. These were used to establish a "reference" price, based on aver-

age production costs, mission to act again. In weighted according to producers' European sales volumes, plus a 9.5 per cent profit margin.

Quarterly readjustment aimed to take account of the constantly falling production costs of D-Rams thanks to technological advances. To avoid newcomers cir-

cumventing the measures. anti-dumping duties of 60 per cent were imposed on other D-Rams imported from Japan, but these were hardly used since nearly all imports came from the 11 manufac-

Dumping by South Korean producers forced the Com-

March 1993, it imposed minimum prices on South Korea's Goldstar. Hvundai and Samsung, this time on an individual, unweighted, production cost plus profit

Anti-dumping duties of 24.7 per cent were imposed on any other South Korean D-Ram imports.

After worldwide prices the Commission suspended the measures in June 1995, for the maximum one year permitted by EU law. EU ministers later extended the suspension by

By then, chip prices were

already falling due to global overcapacity. Prices plunged 80 per cent during 1996 with a significant impact, in particular, on the South Kor-

The Commission was meanwhile reviewing. whether the D-Ram measures should be modified. But the review was held up. first by EU attempts to join the US-Japan semiconductor agreement last summer. then by negotiations in December over an international Information Technology Agreement (ITA) to reduce tariffs and improve

market acces We could hardly have negotiated on the ITA while simultaneously demanding information for an antidumping inquiry. It would not have looked good," admits one Commission offi-

The result was that March arrived without a conclusion to the review, forcing the Commission to reimpose the old minimum prices.

Based on the production cost plus 9.5 per cent profit margin formula, and the Commission's claim that Japanese and South Korean

prices of affected D-Rams could rise by a double-digit percentage between now and

Most observers expect the review to recommend that anti-dumping measures remain, but industry is pushing for the blanket "reference" price system used for Japan to be replaced by the simple production cost-plusmargin formula used for individual South Korean suppliers.

The reference price often aks, say industry insiders, and influences worldwide prices: minimum prices set for individual companies more often remain confiden-

While east Asian chip makers and their users will complain, the European Riectronic Component Manufacturers' Association (EECA), representing European D-Ram makers, is pressing for measures to

continue. "The whole industry was expecting measures to be reinstated in March," said Mr Eckhard Runge, EECA secretary general.

"We can't accept that in dumping should be allowed

Neil Buckley

Asian manufacturers take pragmatic line

manufacturers were disagpointed about the EU's reintroduction of reference prices for D-Ram chips, but did not expect it to have a significant impact on their

Most large Japanese semiconductor makers have manufacturing operations within the EU and are unlikely to be affected by the tariffs

Fulitsu for example. meets European demand with output from its manufacturing facility in the UK, and exports semiconductors from the region to other parts of the world. "It's not something that we see as disruptive," the company

by the tariffs did not seem concerned. Hitachi said it did not foresee any loss of – its main concern was the higher prices customers would have to pay for its products. While the tariffs are unwelcome, says Oki Elec-

tric, the company derives only about 10 per cent of its semiconductor sales in the region and does not expect to be seriously affected.

Michiyo Nakamoto John Burton

Prices up after move on duties

nent that the RT would reinstate antimanufactures, spot market prices for the most common 16Mb chips gained between 70 cents and \$1.40, according to Salomon Brothers

But based on comments by ome Korean and Japanese suppliers earlier this year that they were cotting production volumes of 16Mh D-Rams, spot market prices had already rebounded above the \$9 level.

Spot prices have risen by between 70 per cent and 90 per cent since they reached their lows in January and contract pricing, which about \$1 on 16Mb chips, had also began to increase.

Micron Technology, 1 leading US supplier of D-Rams, suggested that contract pricing had risen from the mid \$6 range to the low

Based on these changes. most analysts think the EU initiative will have little real effect on memory chip prices. "By the time that effect, it may have little to no impact on the D-Ram market," said Salomon Brothers analysts in their semiconductor weekly report.

European memory chip manufacturers such as Siemens, the German electronics group, which has been investing heavily in semiconductor operations, are also cautious. "It is not easy to say what effect the EU action will have," it said. One continuing uncer

to which the Japanese and Korean D-Ram manufacturers have really out D-Ram production volumes.

> abandoned a proposal to build a multi-billion dollar petrochemical complex in China - again under government pressure. Instead it is now building an US\$11bn oil refining complex in central Taiwan.

In 1992, Formosa Plastics

Formosa could be hit with maximum fine of US\$545,000. However, the government could in theory punish Formosa by restricting its domestic fund-raising activities in the share, debt

Formosa plea on | Leap into unknown for Kesri

V V party support from India's minority United Front government, Mr Sitaram Kesri, the party leader, has left indian politics drifting.

While the move precipitated a crisis for the 13-party United Front coalition - puncturing the revived economic sentiment excited by its recent bold tax-cutting budget nany analysts believe Mr Kesri's act

also heralds upheaval in Congress.

It took weeks of political dealmaking last May, among Congress, the Hindu nationalist Bharatiya Janata party (BJP) and a clutch of regional parties, to produce the ideologically diverse UF, whose tenure rested on the support of 142 Congress MPs. The uniting motive was to keep the "communal" BJP from power. But with Congress support now withdrawn, manoeuvring has recomm-

Several outcomes appear possible. One is fresh elections before summer. Another is a Congress government, to which Mr Kesri has staked a claim but which would require him to prise parties away from the coalition, which has so far rebuffed talk of defections. A third formula was that the next days' horse-trading might spur realignments within both the UF and Congress itself designed to reformulate the coalition, avoid an election and keep the BJP in the cold.

Yesterday's sole certainty was that Congress and UF politicians have just 11 days' bargaining before them. Despite Mr Kesri's appeal for permission to try to form a government, President Shankar Dayal Sharma instead accepted Mr Gowda's request for a "trial of strength" in parliament through a confidence vote, on

Arithmetic is against the UF,

which can count on just 176 MPs in the 543-seat house. The BJP and its historically poor performance last allies (208 seats in all), relishing an yea early election they believe they would win outright, have said they Kesri took such a risk, without even UF's widely applauded and business-

will vote against the UF. A bigger question is what Congress's 142 MPs will decide to do.

If Congress fails to annex support from the UF by next week and form the president were that the UF's a government, a vote to bring down reign had led to economic "drift". the UF would pitch the party into a rising prices, and a "growing comgeneral election which most recent opinion polls and local election results suggest would inflict an even heavier defeat on Congress than its

consulting some powerful members of his party and without first securing political support from outside. The reasons cited in his letter to

that law and order in the country had "completely collapsed". But most commentators have given such pretexts short shrift. This raises the question why Mr tators pointed out that, after the

munal menace". His letter also said

friendly budget last month, and on the very weekend of the first talks between India and Pakistan in three years, the UF was showing more political direction than ever. "It did seem at long last that the UF administration was beginning to acquire a distinct policy profile," wrote The Hindu newspaper.

Instead, commentators suggested personal reasons lay behind the 78year-old Mr Kesri's gamble. Among these are his own professed ambition to become prime minister. But many suggest he also believed that the UF - and Mr Gowda in particular - was waging a campaign against him and other Congress leaders through the police and judiciary.

Mr Kesri was said to have become persuaded that several more criminal and corruption cases were soon to be brought against him and colagues to add to those which have already tainted several Congress leaders, including Mr P.V. Narasimha Rao, the former prime minister, whom Mr Kesri replaced last

Mr Kesri's decision, wrote Mr Shekhar Gupta, editor of the Indian Express, "smacks of desperation that comes from deep political and personal paranois rather than any cold political calculation".

The question now is whether Congress MPs may make their own cold political calculation and decide against an election. "That would be the last choice of most of them," said Mr Pran Chopra, fellow at the Centre for Policy Research in Delhi. Instead, many believe the instinct for self-preservation, nowhere stronger in Indian politics than within the 112-year-old Congress party, may lead to Mr Kesri's isolation and some

accommodation with the UF. But speculation last night on the precise formulation which might emerge from the backroom bargaining was as idle as Delhi's rumour mill was feverish. Whatever happens, it looks likely that political blood is about to be spilled.

Tokyo package aims to spur property market

By William Dawkins in Tokyo

The Japanese finance ministry yesterday delivered its long-awaited package of tax breaks and deregulation measures to stimulate the somnolent property market such properties, said Mr and enable banks to raise Brian Waterhouse, financial cash from bad property analyst at HSBC James

It includes the imminent removal of restrictions on collateral is allowed in the sale of property-backed securities, the state purchase of 900 inner city plots worth recognised as tradable secu-Y380bn (\$3.1bn) over the rities. Securities law is to be next year and tax incentives amended "immediately" to for the redevelopment of allow banks and stockbro- return, analysts estimate. underused urban land.

The measures are widely property leans. seen as vital to helping banks, the value of whose loan portfolios has crumbled with the 70 per cent decline in average land prices over the past six years. But they Details, leaked in advanced, were a factor in yesterday's 1.02 per cent decline in the Nikkel 225 index, ending the fiscal year at 18,003.4.

even further because banks would have to cut the value of their borrowers' properties to realistic levels if they were to persuade investors to buy securities backed by

Canel Japan. Securitisation of property Japan, but rare because such instruments are not legally kers to deal in securitised

will soon be allowed to sell the right to receive profits

Property prices could fall from property-backed loans. At the latest count at the end of last September, the top 10 banks admitted to Y14,000bn of bad debts, mostly related to property. However, it is unclear how much of that produces enough rent, or is worth enough, to attract investors. On average, the top banks calculate their bad loans are worth 40 per cent of face value. At current rentals,

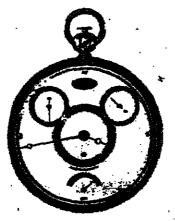

they would need to cut that

There used to be a time when Japanese workers' wages, like much else in the economy, advanced in pat-

terned unity across and within industries. It was a feature of an egalitarian society in which employers were expected to award more or less the same increase across the board, irrespective of productivity but safe in the knowledge that the economy would

always grow.

The past few weeks have proved that is no longer the case. Japan's annual collective wage bargaining ritual, misleadingly named the shunto, or spring labour offensive, a central feature of the lifetime employment system, is drawing to an end. This year's wage awards are nothing like as collective as they were, even in the depths of the recent

On average, basic wage increases will be slightly less than 3 per cent, compared with last year's 2.8 per cent, in line with a modest economic recovery and the near absence of inflation.

The basic wage made up about 70 per cent of total compensation last year. Add in bonuses and overtime, and the increase in total compensation is expected to touch 25 per cent in the year starting next month, slightly more than 21 per cent in 1996, says the Tokyo office of

For several years, average wages have been more flexible than in other industrialised countries, one of Japa-ness industry's competitive strengths. Nominal wage rises, for example, swung the former practice of seek-

0.5 per cent two years later. in the depths of the downtimes that level this year. But until recently, flexibil-

ity within the average has heen slight, an aspect of Japan's so-called "convoy system" in which compani perform very much alike, with the strong tugging the weak through rough waters. Within this year's average

pay increase, the divergences between settlements in more and less profitable sectors and companies is unprecedented. Workers at Toyota, the profitable car producer, for example, have been offered a total compensation increase of 4.4 per cent, well above the national average. This year Nissan and Honda were unable to

match Toyota in cash terms. The same pattern is evident between sectors, with highest pay awards going to internationally competitive industries such as cars, steel and electronica and lower awards to demestically oriented or high-cost sectors such as heavy engineering and power supply.

This tendency has been

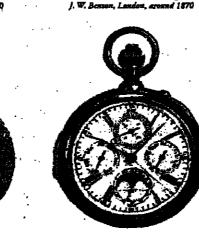

matched by a breakdown in

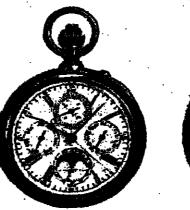

Private rail companies this year split into three groups each of which made a sepaturn, and will be around five rate pay offer. Resistance from Japan's much weakened trade union movement was neglicible.

"For an increasingly large sector of the economy, the shunto has become irrelevant. Japanese companies are realising that they have to pay good people more and had ones less," says Mr Richard Jerrem, chief economist at ING Barings Securities in Tokyo.

A recent survey of Japanese employers by the ministry of labour illustrates the point. The proportion which sets pay according to company performance has meen sharply since the turn of the sharply succeeded which decade, while those which set wages according to w Japanese competitors sare

Regulators in City are urged to restrict buying of targets' shares in the market

Curb on hostile bids is considered

By David Wighton, Political Correspondent

Regulators in the City of London are considering proposals that would make hostile takeovers more difficult by restricting the ability of bid-ders to buy shares in the market.

The Takeover Panel, which oversees the conduct of bids, is being urged to change the rules to limit bidders' market purchases or even to ban the practice. Leading figures from industry and the City are privately lobbying for reforms, and regulators concede change looks likely. Critics of the current system believe they could be backed by a

future Labour government inter-

ested in tilting the balance against hostile bids. But change may be opposed by some stockbrokers which tances. But with 30 per cent in hand, ered to a bidder cold and untried." carry out the market purchases.

The moves have been prompted by December's takeover of Northern Electric, which was seen to have been acquired too cheaply by Cal-Energy of the US because it was able to make large market purchases.

Mr David Morris, then chairman of Northern, argues that CalEnergy had an unfair advantage because it was able to buy 30 per cent of Northern's shares while the price was depressed by the possibility that the offer would be referred to the UK Monopolies and Mergers Commission. The price recovered when the

CalEnergy gained control by the nar-

rowest of margins. There is no doubt that Northern would have escaped or fetched a higher price if the bidder had not been able to buy in the market," said

ent banker. In light of the Northern case, the Takeover Panel is reviewing its rules on share purchases. These include the right for a bidder to buy up to 30 per cent of a target's shares in the market before the offer wins regulatory clearance. Mr Morris has called for the ceiling to be cut to 15 per cent, saying: "Such a limit would

The most radical reform would be to adopt the US practice where a bidder is barred from buying in the market once an offer has been made. Supporters say it would uphold the principle of equal treatment for all shareholders. It would also put the bidder on the same level as the target which is barred from buying its

Critics of the US system say that it encourages share purchases by arbi-trageurs and the practice of "greenmail", where a company buys back its shares at above market value to protect itself from takeover.

Labour says it is firm on Sinn Féin

By David Wighton and John Murray-Brown

The opposition Labour party yesterday denied that it had softened the conditions it would impose on the admittance of Sinn Féin, the political wing of the Irish Republican Army, to the Northern

ireland peace talks. The party insisted that here could be no talks with Sinn Féin without a new and genuine IRA ceasefire. But the governing Conservative party attacked as "dangerous" an interview by Ms Mo Mowlam, Labour's chief shadow minister for Northern Ireland, in which she said there would be a "high possibility" of Sinn Féin being admitted to resumed talks in June if a new ceasefire had been declared.

Str Patrick Mayhem, chief Northern Ireland minister in the UK in preparation for a tax-free company sale. "This is the one thing you would the Conservative governdo ahead of the election." said one adviser. "The firm ment, said it had avoided giving a specific date by which the conditions could be complied with. "To do so Labour has established a would be dangerous," he said, adding that he did not rule out the admission of standards and close the skills gap between the UK Sinn Féin in June.

and economic rivals. Mr Ms Mowlam's comments on Saturday sparked a row after Sinn Féin described them as offering "a new opportunity for peace". Consaid the task force, to be Reynolds of Newcastle Uniservative MPs immediately versity, was prompted by the accused her of undermining UK's underachievement in Britain's bipartisan approach to Northern Ireland while anti-nationalat the annual conference of ist politicisms in the region the National Union of Teachthreatened to walk out of the negotiations if Sinn Fein were allowed in only weeks after their latest bombings. Mr Ken Maginnis, security

man for the pro-British Ulster Unionist party, sald it was naive to believe that the IRA could prove an intention towards peace so soon after the weekend's upsurge in violence.

But Ms Mowlam was backed by one of the small parties with links to anti-nationalist paramilitaries. which said she was "making reasonable sounds towards Sinn Féin".

UK NEWS DIGEST

Imports 'keep car sales share'

imported cars should maintain their big share of the UK market for new cars this year in spite of steadily rising domestic car production, a study from the Society of Motor Manufacturers and Traders, the industry associa tion, says today. Imports increased to 62 per cent of sales last year. The society expects output of passenger vehicle to continue growing, although at a slower pace. Car production should rise by 1.4 per cent to 1.71m vehicles this year and by a further 1.8 per cent to 1.74m in 1998 on the back of continued strength in production for export, it adds. It predicts that the rise in sales of new cars this year will be more modest than in recent years and says there may be a decline in 1998. Haig Simonia

■ MANUFACTURING

Growth 'may be understated'

Growth in UK manufacturing in the past decade may have been understated because of the increased use of "out-sourcing", the Foundation for Manufacturing and Industry, an industry think-tank, says today. It estimates that £4.5bn (\$7.1bn) worth of services were contracted out by manufacturers between 1984 and 1994. At the same time, the contribution of commercial services to manufa turing production increased by nearly 50 per cent, indicating that many activities previously part of the manufac turing sector have been reclassified as commercial services. Since 1964, many manufacturing companies have bought in specialist services such as cleaning, information technology and security. Miss Jane Spiller, author of the report, said: "In many cases, the same people are doing the same jobs as before. But now their output is attributed to the service sector, while previously it was attributed to manufacturing.

MUSIC AND VIDEO

Superstores take 15% of market

Supermarkets are now responsible for 15 per cent of the music and video market, according to Corporate Intelligence on Retailing, a specialist research consultancy. It says their share may rise to between 20 per cent and 25 per cent of sales by the year 2000. Sales have risen rapidly in the early 1990s, reaching a combined value of nearly £2bn (\$3.2bn) last year. But Corporate Intelligence on Retailing warns that the market may be destablised if supermarkets apply the same aggressive discounting tac-tics to albums and videos as they have to products such as petrol, clothing and cosmetics. It identifies W.H. Smith and Boots - and record retailers operating from small stores such as Our Price - as the likeliest victims of the supermarkets' expansion.

TELEVISION

New channel claims 6m viewers

Channel 5, the new terrestrial television channel which started broadcasting on Sunday, claimed yesterday to have attracted 5.8 per cent of the television audience dur-ing peak viewing on Sunday evening - beating Channel 4's 4.7 per cent. The new channel estimated that more than 6m people tuned in on its opening night, in line with its target. Channel 5 hopes to attract 5 per cent of the television audience by the end of the year. Alice Rowsthorn

Labour government would hit tax breaks

By Jim Kelly in London

Tax breaks enjoyed by entrepreneurs who sell their businesses while technically non-resident in the UK are likely to be wiped out during the first term of a future Labour government. The opposition party's

finance team is working on proposals to reform the UK law of residence which allows companies to be sold, free of capital gains tax, if the owner has been working outside Britain for a year. A senior Labour source

said the party planned an "objective residence test" and wanted to stop businessmen "manipulating the syscent tax on the proceeds of selling a UK business.

Labour believes that 18th century rules that define residence as physically being in the UK for more than 182 days in a year are out of date in the age of air travel and global markets.

"Basically the law allows you to nip abroad and pay no tax on the sale of the business," said one tax expert with a leading firm. "It is a very common means of not paying tax and there must be concern that the loophole will be closed."

The move represents a rare pre-election commitment by Labour to go further in cracking down on tax

tem" to avoid paying 40 per Tories in trouble: the start of the governing Conservative party's campaign for the May 1. general election has been disrupted in the past week by further allegations against some of its senior figures, all of them married. Allan Stewart (left), who held one of the party's safest parliamentary seats in Scotland, quit after a newspaper printed allegations of an extramarital relationship. Piers Merchant, a 46-year-old MP and former journalist, has refused to quit after another newspaper alleged that he had an affair with a 17-year-old nightclub hostess. Sir Michael Hirst (right), a former MP, resigned at the weekend as ers, the biggest teachers' chairman of the party in Scotland, citing a "past indiscretion" after newspaper allegations of a homosexual affair.

> ing Conservatives - who used the last Budget to launch an £800m (\$1,272m) "spend to save" programme over three years designed to claw back £7bn in tax.

Tax experts believe the Budget forecasts are extremely ambitious and it is understood Labour will be looking at several ways of trying to widen the antiavoidance net to meet the avoidance than the govern- same savings target.

In 1989, the Conservatives powerful expatriate groups. ditched Inland Revenue plans to crack down on restdence - and the related rules covering the taxation of exthan residence. patriots in the UK - after what is understood to have

AGRICULTURAL PANK OF GREECE S.A.

BANK OF CENTRAL GREECE

bance between

SAM DENOLUMENC

PUBLIC TENDER NOTICE FOR THE SALE OF A MAJORITY STAKE IN THE BANK OF CENTRAL GREECE SA

The AGRICULTURAL BANK OF GREECE SA (hereafter ABG) owns 56.6% of the common stock and 20.1% of the preferred non-voting stock of the BANK OF CENTRAL GREECE SA (hereafter BCG). ABG is interested in selling part (at least 50% + 1 share) or the total (56.6%) of the common BCG stock plus the total (20.1%) of the preferred nonvoting BCG stock that it owns.

The BANK OF CENTRAL GREECE SA was established in 1936. The company has been listed on the Athens Stock Exchange since 1991, its share capital is currently GDR 9.8 bn. It operates 22 branches, 13 of which are located in the greater Athens area and 4 in Thessaloniki, while it employs approximately 580 people. As of 31/12/1996, total deposits amounted to GDR 117.5 bn and total loans to GDR 87 bn, while FY 1996 pre-tax profits are estimated at GDR 1.5 bn. ABG has engaged ABN AMRO BANK NV and DELOTTE & TOUCHE SA to act as its exclusive advisors in the aforementioned sale of all or part of ABG's holding in BCG. The sale procedure consists of 4 steps:

Step 1: Through the present announcement investors are invited to express their interest to acquire all or part of

ABG's holding in BCG. Step 2: ABG and its advisors will perform a preselection of interested investors. Preselected investors will be asked to sign a Confidentiality Agreement before they receive an information Memorandum and the results of a Financial Due Diligence on BCG (currently performed on behalf of ABG by an international accounting firm).

Step 3: Preselected investors must submit their binding offers within approximately 5 weeks from receiving a written notification that they have been preselected. The offers must be accompanied by a bid bond in the amount of GDR 2 bn, the text of which will be provided by ABG.

Step 4: Submitted offers will be evaluated, the best offer will be selected and an initial agreement will be signed. The selected investor will then be offered a period of three weeks, starting from the date the initial agreeme signed, within which he can perform his own due diligence, subject to the condition that the final offer will not be more than 5% lower than the initial binding offer and that any such divergence can only result from additional information unveiled during this due diligence.

interested parties can obtain a short Information Leaflet on the BANK OF CENTRAL GREECE SA by applying

in writing to the following: ABN AMRO BANK NV Attn: Ms. Martha Papanastasiou 330 Thisseos Ave. GR-17672 Athens, Greece Phone: +30-1-9397129/128 Fax: +30-1-9305323

DELOITTE & TOUCHE SA Attn: Mr Michael Hadjipaviou 250-254 Klfissias Ave. GR-15231 Halandri, Greece Phone: +30-1-6776600-10 Fax: +30-1-6776190

Expressions of Interest (Step 1) must be submitted (in Greek or English) to the AGRICULTURAL BANK OF GREECE SA, Subsidiaries Division, 4th Floor, 23 Panepistimiou Ave., Athens, Greece. Submission deadline is April 36, 1997 at 15:00 local time. Expressions of interest received after the above deadline will not be

Interested investors must submit, together with their expressions of interest, a brief description of their full range of activities, a full presentation of their financial services activities, financial statements of the last 3 years and an Outline Business Plan indicating how the investors plan to develop BCG to fit their business strategy and corporate goals.

Interested investors must comply with Bank of Greece requirements, specifically as outlined in Article 6 and 17 of Law 2076/92, Article 40 of Law 1806/88 and Act 1379/88 of the Governor of the Bank of Greece. σ

Interested investors will be evaluated mainly on the following criteria: - Financial strength and credibility

- Experience in the banking and/or the financial services sector

 Intended development of the BCG - Securing the jobs of the BCG personnel.

It should be noted that submitting an expression of interest does not in any way bind the AGRICULTURAL BANK OF GREECE SA to involve the interested party in the subsequent steps of the sale procedure. ABN-AMRO Bank

he Japanese celebrated Easter this year by giving each other a different kind of egg, made of chips rather than chocolate. For those who missed the pub-

licity, the most prized gift in Japanese homes recently has been the tamagotchi - literally "cute little egg" - an oval, pocket-sized chunk of plastic, with a liquid crystal screen on which a tiny virtual chicken lives.

You press various buttons to feed, clean or play with it. If neglected or spoiled, the digital creature emits a piercing beep, eventually mutates into a cross old man, or oyojitchi, and dies. If well cared for, it ruffles its feathers, hops about, and lives happily for 10 days or so, a tribute to its proud parent. Press reset and

Tamagotchi bas won over the parenting instincts of almost 1.4m Japanese, mostly young women and girls, since its launch five months ago. It is too early to tell whether the *tamagatchi* is ket, in spite of schoolgirl bore-

March of the digital chickens

anything more than a fad, though there have been disturbing television reports that highschool girls, a demanding test market, are beginning to find the virtual pet a bit of a bore.

But for the moment at least the beeping of impatient tamagotchi constantly disturbs the peace in trains, bars and offices. A young Japanese relative of mine created a family crisis by selfishly killing her sister's tamagotchi - the only one in the family nest - in order to grow one of her own. Long lines form outside toy shops whenever there is a rumour of an imminent tamagotchi delivery. Japan Airlines last week announced it would give away 30,000 of them to frequent fliers. Some are making a real killing

DATELINE

Tokyo: Virtual relationship computer games. be they boy-girl or girl-chicken, are taking hold in

William Dawkins

Japan, writes

dom, for up to Y50,000 (£250, or \$400), 25 times the retail price. An Osaka gangster was arrested last month for demanding Y5m "apology money" from a supplier who was three weeks late with a caused by drivers attempting to relationship computer games. In cater to tomagotchi needs while

No one has been more surprised by all this than the creatures' creator, Bandai, Japan's largest toy company, which has increased production five-fold to keep up with demand. New versions, with a fish, an angel and forest animals, are on the way. US sales start in May, with Europe some time after that.

In June, another generation of virtual chicks, to be named tamapichi will start to appear on the digital displays of Bandai mobile telephones. The mobiles will be able to transmit the creatures to each other. The breeding

possibilities are endless. The remarkable success of tam-

Egg fever has even become a agotchi is an example of the marked down for poor grooming danger to traffic. The police have strength of a relatively new marissued a warning after accidents ket little known outside Japan – ences. It is endearingly proper. another variant, the player brings up, or tries to build a rela-tionship with, a virtual human

> this is a mainly male market. So boy-girl, rather than girl-chicken is the norm.

The pioneer of such "love games" is Tokimeki (throbbing heart) Memorial in which the player tries to persuade a virtual idol, Shiori Fujisaki, or one of her virtual girlfriends, to fall in love with him. You pick a topic of conversation and type in your replies. Get too cheeky, or make a grab for Shiori's hand at the wrong moment, and she asks to go home. Being too dull or cautious produces the same composite of the body of a real- *http://www.etud.insa-tise.response. Players also get life model, the voice of a fr/ mdumas/kyoko.html

character. Unlike tamagotchi.

ences. It is endearingly proper.
Outside the screen, Shiori has begun to take on a life of her own, with a fan club, a healthy merchandising business and a compact disc of two somewhat anodyne songs: Teach me, Mr Sky and Let's go with the wind. She has as many fans as a real idol. Konami, the software games group, has sold 1.1m copies of Tokimeki Memorial since its lannch in 1994.

Recently, Shiori has been joined by another virtual heartthrob called Kyoko Date. Unlike her older predecessor, Kyoko is three-dimensional and does not play games. Kyoko, the creation of HoriPro, Japan's top talent agency, is a 16-year-old digital

well-known singer and the movements of a dancer. Her first music CD is said by HoriPro to be selling well, though I found the music forgettable. Curious? Visit Kyoko's website*

Some sociologically inclined observers claim, unfairly, that the success of virtual friends, feathered or otherwise, proves the Japanese are at heart nerds, more at ease with machines than with people. But Tokimeki Memorial players say this is practice, not a substitute, for real life. The phenomenon could also be

another example of that admirably pragmatic Japanese respect for artifice. Many people, including this writer, prefer Kyoko to the dozens of real teen idols who screechily occupy time on Japan's growing number of tele-

The artificial idol is, at least better programmed than the real ones.

Profile: Jürgen Weber, Lufthansa

Pilot for the open skies

are opened to full competition today, Jürgen Weber, chairman of Lufthansa, will be able to watch its impact from the window of his office overlooking Frankfurt airport's main runway. It is unlikely to be an attractive sight for Germany's national air-line - at least not initially.

New competitors will come on to the scene, new adventurers will appear on our market," he "Some will disappear again." But, until they do, Weber reckons that rivals, wishing to attack Lufthansa on its home ground, could cause a lot of damage by pushing fares too low for some airlines' comfort. Passengers will hardly complain.

Under the liberalisation, any European airline will be free to operate in any country of the European Economic Area - the European Union plus Norway, iceland and Liechtenstein - and fly between any of its cities. including domestic routes. For fliers, the price-cutting effect of a host of new airlines could prove a bonanza. But Weber does not reckon this will last long, especially in high-cost Germany. Once weaker new entrants drop out, prices could rise again.

Then, the market will be divided between a few big carriers - in which he includes Lufthansa, Scandinavian-based SAS, British Airways and KLM of the operators, "Not all European Airlines can survive, at least not in the European Commission tries today's form," he says. The survivors will be those which have will run out sometime. Taxpayers 'done their homework", namely learnt to exist without subsidies.

some European airlines, notably the sorting-out process. The outspoken Weber has constantly railed against what he calls "a scandal and a malign distortion of competition"

But so far to little avail Nor is he optimistic about early change. noting that subsidies of some DM15bn (\$8.8bn) have been paid to European airlines in the past

says, always get in the way when to limit payouts. "But the money will say: 'that's enough.' '

Until they do, Lufthansa, oper-Yet the subsidies granted to ating in one of the world's highest-cost countries, will have Air France, are likely to inhibit to live with the problem. Weber also criticises the fact that, while the skies have been liberalised, infrastructure has not. Airport costs remain high, especially in Germany, and ground-services such as aircraft handling and cargo-loading are not due to be thrown open to competition for several years.

Yet Weber is used to dealing

Netherlands and some niche four years. National politics, he with tough challenges. The 55year-old engineer, whose direct but undemonstrative manner and down-to-earth accent show his Black Forest origins, became chairman in 1991 when Luft-

hansa faced a financial crisis. "I didn't know what lay ahead of me then," he admits. Sometimes, he must still wonder as Lufthansa's efforts to lift productivity, cut costs, trim tobs and restructure its operations need to be constantly reinforced in today's competitive airline market. Six years ago, it had too many aircraft, too many people and was too inefficient - certainly in comparison with British Airways, then feeling the invigorating benefits of privatisation. Today, Lufthansa is leaner,

profitable and spreading its wings. "Our productivity is 50 per cent higher than it was six years ago." Weber says. "But we've got to go further because the drop in prices [for airline flights] will continue. It will be intensified by the European liberalisation." He has put Lufthansa through intensive restructuring since the early 1990s - carrying trade unions with him, even though jobs have been shed and wages held down.

The final step in that process was the decision to put its scheduled passenger activities, accounting for half Lufthansa's profits, into a separate division this year. This was aimed at cutting costs and improving efficiency, but job losses will be minimal. "You have to have measures that do not involve brutal job-cutting," he says.

To brighten up its intercontinental services, the airline plans to spend more than DM150m revamping its aircraft. Lufthansa is also talking to Asian airlines about possible links to extend its route network its current international alliances include United Airlines, SAS and Thai Airways – and is particularly interested in China and India.

Talks are advanced with British Midland about partnership on European routes. initially between the UK and Germany and later elsewhere. "I am confident we shall be taking the first steps with British Midland this

year," Weber says. Coping with Europe's open skies is not his only preoccupation. This year the government's remaining 35 per cent stake in Lufthansa is due to be sold to private investors for at least DM3bn. Weber is delighted, expecting the move to reinforce employees' motivation as well as lift the airline's profile. Full privatisation "has been my personal goal since my first minute as

Andrew Fisher

FT GUIDE TO:

SHOPPING ON THE INTERNET

I always thought virtual reality shopping was more science fiction than science fact. But they tell me that it's now possible to buy everything from socks to books by computer. So who are all these Internet retailers?

Actually there are thousands of them. They range from tiny Internet-only companies to Wal-Mart (www.wai-mart.com), the world's largest retailer, which started offering products over the worldwide computer network last year. Supermarkets have also started to come online and allow consumers to do some grocery shopping at home. In the UK, Tesco (www.tesco.co.uk), for example, allows customers in west London and Leeds to order groceries over the Internet. In the US, shoppers in Chicago, San Francisco, Atlanta, Houston and Columbus can order supermarket and drugstore items through a service called Peapod (www.peapod.com).

Most people I know still do things the oldfashioned way, trundling their shopping home in over-stuffed plastic bags. Who is actually buying

stuff online? The demographics of Internet shoppers, not surprisingly, match those of Internet users in general – so technologically savvy young men buy the most online. That is changing, however. By 2000, a third of Internet users will probably be women. according to Forrester Research, a technology consulting and research company.

So what are the most popular things to buy

Online purchases fall into three main categories. Computer software and hardware were the first goods widely available online and remain the items most commonly purchased over the Interparticularly hot items. Pornographic materials are also among the biggest sellers over the Inter-

How much are these retailers selling?

Nobody really knows. Forrester, which is quite conservative in its assessment estimates that Internet retailing in the US generated about \$536m (£337m) in revenues last year. It says that could grow to \$7bn by the turn of the century. International Data Corporation, another technology research group, says the figure could be more than 10 times this amount - as high as \$95bn. In other words, growth could be fast or astoundingly fast, depending on who you believe. For the moment, though, it represents only a tiny proportion of total US retailing revenues, estimated at \$2,400bn by the National Retail Federation.

And is anyone making any money at this?

It is difficult to say. Most of the bigger Internet only retailers are private companies that do not release figures, while most traditional retailers do

not break out statistics on their online operations.

Two companies that have put out results are Amazon.com (unun.amazon.com), the Seattle-based Internet bookseller which filed last week to sell shares to the public, and bookshop.co.uk (www.bookshop.co.uk), which made its debut recently on the UK Ofex market. The former is much bigger than the latter, but both are making sses. This is mainly because they are investing heavily in technology and marketing to expand their businesses. In 1996 Amazon had a loss of \$5.8m on revenues of \$15.7m and Bookshop had a loss of £169,863 (\$270,082) on revenues of £568,162. The more ambitions a retailer is the more likely it is to make a loss. It doesn't cost much to set up a tiny business, but marketing and keeping up with the latest technology can be very expensive.

What is the main attraction of shopping over the Internet?

The internet can be a very efficient way to buy things. This is especially true of computer software, which you can download straight from a retailer's site on the Worldwide Web. This way you have it instantaneously without the waste of packaging. It can also be fun. Many of the sites that sell books, CDs and films are entertaining to browse through because of the information they provide about the products. For example, Amazon provides book reviews and excerpts for shoppers to peruse. With the right software, shoppers can also listen to parts of CDs and even watch snip-

net. Then there are travel-related items, such as Sounds fantastic. Why isn't everybody doing it? aircraft tickets. Many airlines and travel agents As much fun as online shopping is, it can also be will let you look at schedules and buy tickets incredibly frustrating, especially if you don't have fory. a fast modem on your computer. Just getting or with books, music CDs and video cassettes being to popular sites can take an excruciatingly long time. And then there are the security worries.

> What, are you telling me that Internet shouning isn't safe?

Actually, it's pretty secure. Despite worries about computer hackers, most people think there is not much more risk to electronic shopping than there is giving your credit card number to a catalogue merchant. Almost all reputable retailers use some sort of encryption technology to protect credit card information. Most shopping sites on the Worldwide Web have information about security. It is a good idea to check that the retailer has taken some steps to make sure no one else will be

Why did the Federal Reserve raise interest rates last week? The obvious answer is that it ter if they could discard their concluded the risk of rising inflationary pressures in the US econ- Fed's," it says. omy warranted it. But the more interesting question is: how did it reach that conclusion and was

The answer appears to be that the Fed, which has an extraordi-narily good record among central banks in taking timely action to combat inflation, has much better private information prices than outside forecasters.

Economists have speculated for years that the Fed's internal forecasts were more accurate than those used by private sector economists. Now two researchers from the US National Bureau of Economic Research have published a report that appears to confirm this impression*. Christma and David Romer analysed forecasts by the Fed and others over a number of recent years and noted that the central bank's appeared much more accurate in predicting the actual movement of inflation over the

short and medium term. The difference between the two sets of predictions was so great the researchers concluded that the optimal forecasting strategy of someone with access to both forecasts would be to put no weight on the commercial estimates whatsoever. This informational advantage enjoyed by the Fed extends to predicting the movement of real gross domestic

Here the verdict of the report

Gerard Baker · Economics Notebook

How the Fed stays ahead

Superior information is the key to successes against inflation

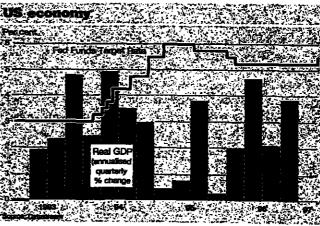

vate sector. "The commercial forecasters would simply do betown forecasts and use the The analysis helps to explain

why the US central bank has had so enviable a record especially in the recent past, at managing domestic demand. Thanks in part to timely monetary policy adjustments by the Fed, the US economy has grown on a remarkably steady path since the end of the last recession in about the future movement of 1991, fluctuating only marginally from quarter to quarter around its long-term potential trend rate

The Fed probably exploited its informational advantage to greatest effect in the period 1994-95. Taking almost all commercial forecasters by surprise, in January 1994, the central bank began to raise short-term interest rates.

US rates had fallen over the previous four years to a level close to zero in real terms. This enough, creating a strong risk of had been engineered partly in response to the recession of the early 1990s, but it had been allowed to continue because of year until real rates had reached the weak condition of the country's banking sector. The Fed regarded it as critical that US banks be allowed to repair their capital base, which had been badly damaged by the growth of either the timing of the Fed's non-performing loans from the move, or how long the tightenthe late 1980s.

To facilitate the reconstruction, the central bank adjusted we now know, it did not, but policy to produce an unusually brought growth back to a stable steep yield curve, by cutting was even more brutal for the pri-short-term interest rates. That

enabled banks to improve the profitability of their lending operations and to make substantial capital gains in the bond But by late 1993, the Fed

decided that short-term rates had been low enough for long accelerating inflation. The central bank then moved seven times in the course of the next 3 per cent.

The key fact here was the unexpected nature of the Fed's move. Most private sector economists completely failed to spot sharp fall in property prices in ing phase would last. Many the late 1980s. argued the Fed action would the the economy into recession. As path, albeit with one or two very sluggish quarters in 1995.

Perhaps the most important finding of the report is that it provides a possible answer to a feature of financial markets that has long puzzled economists.

Following a rate increase by the central bank, a rationalexpectations approach would normally predict that long-term rates should fall. Investors would be expected to interpret tiveness of pre-emptive rate the Fed's move as likely to strikes such as the one the Fed improve the long-term outlook launched last week. But it might for inflation, and should therefore force down yields on longerdated securities. The inflation premium at such maturities should, in theory, now be smaller.

But empirical evidence suggests the opposite happens. Generally, when the Fed raises short-term rates, long-term bond yields also rise. That is precisely what has happened over the last few weeks. Investors, anticipating a Fed increase, pushed the

yield on 30-year treasuries up to a little over 7 per cent from 6.8 per cent a month ago. Why do markets follow this

apparently perverse course? The report suggests that inves-tors in effect adjust their own forecast of future inflation when the Fed changes rates. The fact of a Fed increase is interpreted (correctly) as meaning that the outlook for inflation is actually worse than was previously expected. In other words, markets infer that the Fed has unfavourable private information about the likely behaviour of inflation. The report concludes that they are indeed right to do

One further question not raised by the researchers is should the Fed be permitted to keep such information secret?

Though stealth is often regarded as a central bank's chief weapon, surely markets would become more efficient if they had more perfect information? Publication of the informa-tion might diminish the effecin the long-run, improve the inflation outlook by ensuring market participants operated on the basis of much more accurate expectations. That is something any central bank would surely

magine you are on a flight across Europe and just after take-off the captain's voice comes over the pub-

lic address system. In a reassuring voice he tells you that the focus of his efforts will be to fly at 300mph. He will not be paying much attention to other measures, such as fuel consumption, angle of flight or altitude, because he feels these are

either irrelevant or distracting. This approach to measurement is not designed to inspire trust in the passengers. Yet it is the approach most companies have taken to setting targets and measuring their performance, according to David Norton, the creator of a new style of business measurement called the Balanced Scorecard.

Norton, the affable president of Renaissance Solutions, the international strategy consultancy, and his partner Robert Kaplan, the Arthur Lowes Dickinson Professor of Accounting at the Harvard Business School, developed the Balanced Scorecard working with a dozen companies in the early 1990s, sponsored by the accountants KPMG.

Its adherents believe the scorecard could become one of the most popular and useful management tools of the decade. It is disarmingly simple, yet comprehensive enough to allow companies to monitor and adjust not only their day-to-day performance but also their strategy.

Norton and Kaplan's research identified two significant deficiencies in most corporate strategies. The first was a measure-ment gap. Most companies measure their performance using financial ratios, combined with process measures such as quality, productivity and unit costs.

These measures often provide no more than a narrowly focused historic snapshot of how a company performed in the past. They do little to show what it might be capable of in future.

When Norton and Kaplan probed to find which factors determined the companies' success, they found they were often things which went unmeasured. such as customer satisfaction and loyalty, employee commitment and the speed at which

organisations learn and adapt. The second shortcoming was a strategy gap. Many companies embarked on wave after wave of ambitious-sounding improvement programmes, often accompanied by brave, if banal, words from senior executives, only to find that few bore fruit.

Norton and Kaplan came to the could make sense of in their however, the company would Spanish railway company, are rounded, comprehensive view of everyday work.

The Balanced Scorecard is an attempt to overcome these two shortcomings. "The scorecard is not a way of formulating strategy," says Norton, "It's a way of understanding and checking what you have to do throughout the organisation to make your strategy work."

The Balanced Scorecard, which is explained in their book of that title, combines several vantage points from which an organisaFlying with a clear view

tion's strengths and weaknesses can be assessed: the customer perspective; an internal perspective to assess the quality of people and processes; a financial perspective, which accounts for the way shareholders view performance; and a future perspective, which measures how effectively a company learns, adapts

According to Norton and Kaplan a company's perspective on itself and the world should be built by combining these four perspectives into a single, balanced, integrated view. For example, imagine a com-

pany sets itself an objective of sales growth or market share. The scorecard demands that it conclusion that strategy was translates what that means into rarely translated into action measures of customer acquisition because it was rarely translated and retention, marketing and

Revenue growth/mix

Cost reduction

need to examine what needed to change internally, for instance in working practices or production

Once the need for internal

change is understood, it should be possible to assess what new skills and competencies the company needs to acquire to improve its performance. For each of ese steps Norton and Kaplan outline a set of measures and yardsticks that companies can

The Balanced Scorecard has a growing band of corporate advocates. Norton says 60 per cent of large US corporations use some version of a scorecard that integrates financial with nonfinancial measures.

In Europe companies as diverse ish insurance company; BP

The objective is to identify the measures that best communicate the meaning of a strategy. Every strategy is unique, so every scorecard will contain several unique measures. However, in Kaplan and Norton's experience, certain core

among its adherents. Norton is being asked to speak around the world and recently addressed a London conference organised by Business Intelligence.

The scorecard is attracting this following for several reasons. It is simple to understand and use. It is not abstract. It can help to make sense of a strategy both to senior managers and frontline employees, as long as the right measures are used. The scorecard can be conveyed using numbers, but most companies use an easyto-understand array of graphics, not unlike the instrument panel in an aircraft cockpit, which can be understood almost at a

Employee profitability

its activities, taking into account soft assets such as knowledge and creativity, without being vague or woolly. Norton and Kaplan are measurement wonks, they love numbers.

The scorecard is not without its problems, as Norton acknowledges. What gets measured, gets managed. But what gets measured is often what is easy to measure. Often companies will need to start measuring things that have gone unrecorded. Even if they have much of the basic information, such as customer complaints, collating it will be

Once companies embark on a more integrated approach to measurement a different problem arises. They start measuring too much, too often. It can become a bureaucratic nightmare. According to Norton the big-

gest failing is that companies do not use the measurements to motivate people because they do not link measures to a programme of actions. Getting the right kind of measurement does not solve a problem. A perfect set of scales just tells you how heavy you are, it doesn't do the dieting. and exercise for you.

The Balanced Scorecard could be another passing management fad, travelling a familiar journey from the bookshelves, through the conference circuit to the scrapheap. Yet there is some reason to think it might escape that

There is a growing consensus that business needs to augment traditional financial measures, but as yet no-one has managed to come up with a practicable set of tools. There is a recognition. among blue-chip companies at least, that they need to take a broader view of the sources of competitiveness; to take account of soft assets such as brands and

Environmental pressure groups are calling on companies to adopt social audits and alternative measures of their impact on society.

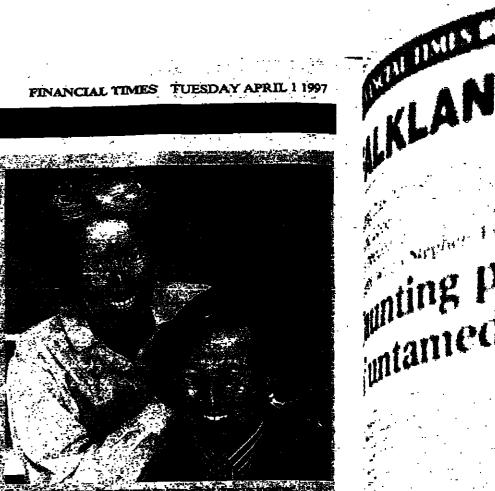

The idea of stakeholding, advocated by the likes of Will Hutton and John Kay, calls on companies to adopt a more inclusive approach involving employees, suppliers and the community as well as shareholders.

Even City analysis respond to accusations of short-termism by complaining that they would take a longer-term view of a company's prospects if only they had ways of measuring them.

The Balanced Scorecard is the best answer so far to these diverse concerns. Yet the strongest guarantee that the nonfinancial measures advocated by Norton and Kaplan will play a large role in corporate life is the outlook facing the accountancy profession. In the UK, for example, on present trends, there soon will be a glut of accountants.

One of the ways the profession could deal with this oversupply is by persuading clients that they should start measuring a lot more aspects of their business.

A strangely unfunny April Fool's day spoof

Selecting and designing scorecard measures

res do appear repeatedly on scorecards. These are:

have just been sent a copy of Why I love Business! by Stephen Michael Peter Thomas. "The Book That is Sweeping America", and "The World's Number One Business Guru", it says in large letters on the front cover. inside the book did not look too

bad at first glance. It is based around the following five "learn-

- Leadership is hard. Communication is important. Change is different.
- People are human. The future is tomorrow.

To the uninitiated, these principles might sound a little obvious, but by the standards of most manent books they are refreshing. For a start, they are true, and, furthermore, you can understand them without too much difficulty.

But as I read on I realised something was wrong. "The editors are keenly aware that no single word ordering is likely to meet the specific needs of every individual reader. Accordingly, the words and sentences can be read in any order you choose," it said at the end of the introduction. Later on I learnt that a good way to start meetings is to play a little air guitar, and that a failsafe means of dealing with colleagues who have problems keeping time is to fit them with a collar that delivers electric shocks at precise moments during their working schedules.

Eventually I got it: there is no Stephen Michael Peter Thomas, and Why I Love Business! is published on April Fool's day. It's all a great big joke. But I am not laughing.

You might think it was a brilliant idea to do a spoof management book. Much of management writing lends itself to being sent up. But in fact it is strangely hard to do. Anything that you think up as a joke has

already been done in all earnestness. The picture on the front cover of Why I Love Business! shows Stephen

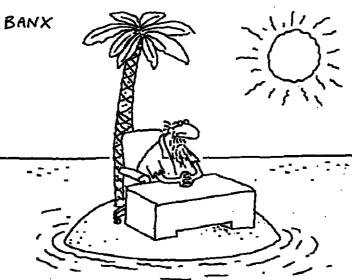

Peters standing in a pair of boxer shorts on the front of Crazy Times Call for Crazy Organisations, a volume which he intended readers to take as gospel.

Compare Why I Love Business! to another book published later this month by the same publisher, John Wiley. This second book is called Challenging Reality, in Search of the Future Organisation. The publicity

Michael Peter Thomas sitting upside human wonder, the book takes us on down in his chair. Some people a breathtaking journey from the Pyrmight think that funny. But it is not amids to the Digital Age, before conhalf as funny as the picture of Tom cluding with a 'Future mindset' for achieving long-term business success." April Fool, surely.

Want to quit the rat-race? Want to have a better, calmer, cleaner life? Here is the perfect job for you. Advertised in the FT last week, the job is chief executive of Tresco (no relation to Tesco) in the isles of material raves: "By embarking on a Scilly. Tresco is apparently beautiquest to discover the passion of past ful, warm and has only 120 people

pollution, no litter, no crowds and no crime.

More unusual still is the fact that the job seems to be open to fairly normal people. In the advertisement there is nothing saying that successful candidates have to be "proactive", or "hands-on", or "team players". There is no mention of "proven track records", nor "in-depth communication skills".

Neither are the tasks that the successful candidate is supposed to carry out too far-fetched. The main job is to make sure that the island's numbers are being crunched properly, and then to "maintain/develop" its commercial activities,

The salary, at only £30,000 to £40,000, may be a bit less than what you are getting at the moment, but then it does come with an island cottage thrown in. What a pity Tresco is insisting on having an accountant. Otherwise my CV would be in the post.

The new boss of the London borough of Hackney was quoted in the FT last Thursday as saying that his council was "run on a basis of departmental baronies, feudalism and piracy", and for that reason he was going to scrap the whole organisation and start it up again arranged on completely different lines.

While he is right to go for the radical solution I feel little optimism over the proposed new structure. In future the top dogs will no longer be responsible for departments such as housing or education. Instead they are to be in charge of waffly new things such as partnership, quality of service or renewal.

I'd have more faith if they'd take the Tresco route and insist on first things first: get in a few thoroughly sensible chaps with a rock-solid grasp of the numbers.

Power property of the property

FALKLAND ISLANDS

Fishing has brought wealth to the islands, ending dependence on sheep farming, but oil is needed for long-term economic security, writes Stephen Fidler

Daunting prospect of untamed riches

In the 15 years since though the generals who Argentina invaded the Brit-launched the ill-judged invalish-ruled Falkland Islands in sion have been replaced by pursuit of a long-standing sovereignty claim, Stanley, the tiny capital of the islands, has changed from an economic backwater to

something of a boom town.
The islanders, once poor colonial cousins, already enjoy a higher standard of living than the average Briton - thanks to fishing. If oil companies exploring in Falkland waters find oil, the islands' 2,200 permanent residents could be richer than the average Kuwaiti. Controlling such wealth would be nigh impossible. Yet without oil, the long-term economic viability of the islands

THE REAL PROPERTY.

remains in doubt. .
In 1982, the islands were a near-feudal colony dependent on shrinking revenues from sheep farms, most of them under the control of absentee landlords in the UK. With the economy in possible terminal decline, the islanders, most of British. descent, were slowly being drawn against their will into the economic and political orbit of neighbouring Argen-

The 10-week occupation of the islands by Argentine troops in 1982 reversed decades of British neglect. Galvanised into action, the government of Mrs Margaret Thatcher despatched forces more than 8,000 miles from

the UK to oust the invaders. Mrs Thatcher committed Britain to the military defence of the islands in the face of Argentina's continuing sovereignty claim. The commitment remains, politigovernment to reverse even over the past decade - have

elected civilians.

A garrison, now some 2,000 strong, was completed in 1985 at Mount Pleasant about 30 miles outside Stanley, the capital, with a runway capable of taking widebodied passenger jets. A twice-weekly Royal Air Force flight provides the islands' main umbilical cord

to the UK. The islanders were given British citizenship, having had it withdrawn in 1981. London increased financial support for the islands, and economic changes eventu-ally led to financial independence from London.

Most of the big sheep farms were broken up and transferred into the hands of islanders. Farm productivity has risen but not by enough - the subdivision of the land coincided with a collapse in world wool prices, leaving the new owners with big mortgages and in deep trou-Although the wool price

has recovered somewhat, only financial support from the government has enabled many farms to survive. The government continues to finance and explore ways to diversify farming. Past attempts to diversify farming have failed. But wages in camp, as the islanders call the countryside, have fallen well below those in Stanley. and agriculture is experiencing an "uneasy peace", says government chief executive Mr Andrew Gurr.

The farm subsidies - and the improvement in the cally difficult for any UK islanders' standard of living

This was the consequence of another change: the declaration in 1986 by the British government of an exclusive economic zone around the

probibitive.

This permitted a successyear. The first exploratory drilling is expected to begin early next year. Meanwhile, another licensing round may be held, this time for a spe-cial zone which straddles

and those incontestably

Yet if oil may secure the islanders' economic future, it also threatens their way of life. A 500m barrel field would generate £1bn a year in government income over 20 years at \$18 a barrel. It would imply significant immigration - there is already full employment and jeopardise appealing fac-ets of island life, such as its lack of crime.

According to Mr Gurr, the chief executive: "The only scenario for rapid growth will be if we discover oil. Then our problem will be controlling what's going on. not deciding what's going

Indeed, oil revenues will serve to intensify a predicament that has already been raised by fishing how to distribute equitably resources that overwhelmingly accrue to an already large and inefficient government - and, in doing so, how to preserve a work ethic in a society which earns its money from economic rent derived from fishing and oil.

The government is already subject to popular pressure to spend the reserves it has built up from fishing revenues - nearly £86m, with a British government "sees an

advantage in reaching such an agreement before any oil is discovered".

However, the islanders are resisting such pressure and the matter is unlikely to be decided before elections due in October for the council, which manages the islands affairs, except for foreign policy and defence.

That's our decision and we should be given a sufficient amount of time to take it. We feel we are being hassled," says Mr Mike Summers, a council member. Whatever the solution, there is resistance to throwing money into the maw of the UK Tressury without having some say on how it is used.

Mr Summers was one of two Falklands councillors who attended a meeting in England in January hosted by Mr Malcolm Rifkind, the British foreign secretary, and attended by Mr Guido di Tella, the Argentine foreign minister. The aim, according to officials involved in the talks, was to explore strong signals from Buenos Aires that the government of President Carlos Menem was considering dropping its

claim to the islands. In the event, Mr Summers and his colleague walked out when the Argentine side raised the possibility of shared sovereignty with the UK under a condominium

arrangement Argentine officials have depicted this as a significant concession. "It's the first time we have raised the possibility that Argentina doesn't get 100 per cent sov-ereignty; and this has all sorts of implications," said an Argentine official. But even a half Argentine share too much for the islanders. Paradoxically, if the Argentines were to renounce their claim, it would be very hard for the islanders to resist gradual economic integration with the mainland of South America. Until the sovereignty dispute is resolved, however, the islands seem set to remain ernment has been pushing an oddity: a small, heavilydefended and possibly very rich piece of Britain more than 8,000 miles away from

OIL EXPLORATION • by Stephen Fidler

Great unknown in economic future

A British-Argentine ignored royalties agreement has paved the way for a \$200m drilling programme

Oil is the great unknown in the Falklands picture. If found in sufficient quantities it would further transform a way of life that has changed significantly in the past decade because of revenues from fishing.

That possibility has been opened up by a 1995 agreement between Britain and Argentina to allow oil development in the disputed waters around the Falklands. In a solution which gets around the competing claims of sovereignty, there was a tacit agreement between the governments not to chase oil companies away by charging excessive

The Falklands will charge a 9 per cent royalty and under legislation still to pass congress in Argentina - the Argentine government will charge 3 per cent. Each formally denies the right of the other to make the charge but oil companies have an idea of the maximum royalty they are likely to pay.

An exploration effort estimated to cost at least \$200m in the next five years is already under way after last year's licensing round.

Five consortia put in successful bids for seven blocks in waters 200 meteres to 300m deep to the north of the islands. Twelve companies make up the consortia, which are led by by Amerada Hess, Shell Exploration - these two companies hold the most favoured blocks -Lasmo International with two blocks, International Petroleum Corp of Canada, and Desire Petroleum, a British group formed from UK and Falklands shareholders. also with two blocks. Blocks offered in the deeper waters

A group comprising British Gas and YPF, the privatised Argentine oil company, was among the unsuccessful bidders. But while the failure of the only Argentine bidder to secure a block was regarded as a disappointment even by the Falklands government, all sides have accepted that the bid was not high enough. According to Argentine officials YPF was unwilling to be used as a tool of Argentine foreign

YPF is expected, however, to be among the bidders in the joint declaration area. south-west of the Falklands, straddling waters which are in dispute and an undisputed Argentine zone. The difficulties this area throws up are likely to be even more complicated than for the first licensing round - but the UK and Argentine governments have announced a target to launch the licensing round in this area by the end of this year.

"At the moment, I'm not confident that we shall meet the target," says Mr David Lang, the attorney-general who sits on the negotiations. "It could be difthe attorneyficult, quite apart from the sovereignty dispute. In the case of Indonesia and Australia - countries that recognise each other - it took years to reach an agreement in the East Timor Sea."

Oil companies say there is technically an 8 per cent to 11 per cent chance of finding oil in commercial quantities in the initial licensing area. Informally, though, many oilmen's "hunches" suggest a significantly greater chance of a worthwhile hydrocarbons find.

Exploration is gearing up slowly, and has already started with more seismic work. Four out of the five groups - all except for - are committed to

ary, provided the operators can secure a rig - which they are likely to share which meets environmental standards. No more than two rigs are likely to be used in the early stages and even if oil is found immediately, it is unlikely to be flowing until 2003.

It appears that the impact of this early exploration on the economy will be small. "Exploration for the local economy is a bit of a disappointment, I have to say. savs Mr Andrew Gurr, the government's chief execu-

Under the agreement with Argentina the Falklands government cannot force oil companies to use the islands as a supply base, although both sides are free to compete to make their facilities the most attractive.

The port at Stanley is unsophisticated, but oil industry officials say it is adequate for the supply vessels needed in the initial exploration phase without significant alteration. A new port may be needed if oil is discovered, probably further from Stanley in deeper

The airfield at Mount Pleasant, the military garrison, may be attractive as a helicopter base. However, the more oil activity that goes to Mount Pleasant, 30 miles from Stanley, the smaller the benefit will be to the local economy.

If it comes to the point where the government cannot provide for the oil companies, the military facilities are here and we are open to negotiations. If the government can provide everything they want, that's fine by us." says Group Captain Alan Hudson, deputy commander at Mount Pleasant.

Government officials say high environmental standards and new technology should minimise the impact drill in the first five-year on the islands' environment exploration phase. Drilling is and wildlife. "A lot of what south of the islands were expected to start next Febru- the public thinks about oil

oil sheikhs, but recognise capital what oil could do to secure Everyone agrees that the Falkland Islands economy their economic future. A recent document published by elected councillors, The has grown rapidly in the Future For The Falkland past 10 years, almost exclu-Islands, says an oil discovery sively as a result of the sucwould "certainly enable us cessful fishing licence to improve standards in regime that began in February 1987. Yet, since there are many areas such as health and safety and communicano estimates of gross domestions. Alongside that lurks tic product nor, indeed, the threat of a mushrooming many other basic economic population that might damindicators, nobody knows by age our time-honoured way how much

And, while it is also clear that the government looms large in the economy, it is again hard to measure the exact percentage of economic activity that it accounts for.

Government revenues are estimated in the financial year ending June 30 at £41.4m, little changed from year. Fishing licences will bring in an estimated £20.5m in the current financial year and the second largest revenue source is the return of more than £7m on government investments

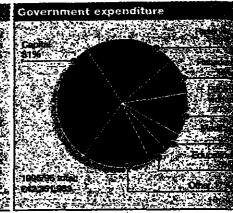

about half the workforce and government spending after wage and salary payments is inevitably heavily concentrated on imported goods. Overall, the islands imported about £17m of goods in 1995, more than 90 per cent from the UK and most of the rest in South America, with Chile prominent. Wool sales at £3.5m a year are almost the only export commodity. According to tax returns for the 1995 assessment year the average income of the 1,103 taxpayers was £13,900, and total income for taxation purposes £15.3m. Wage levels for government employees have risen between 150 per cent and 250 per cent since 1983, while prices have

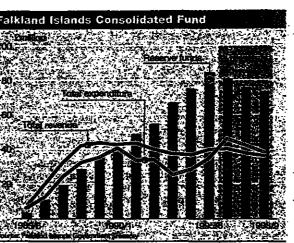

326 per cent. Greater clarity is expected from a study being prepared by consultants Coopers & Lybrand into the likely eco-

risen 82 per cent. Old age

pensions have gone up by

nomic consequences of oil production - or of a failure

to find oil. The April 1996 census does provide greater certainty. The population - discounting the personnel at the Mount Pleasant garrison has been static for the past 10 years. The census counted 2.221 permanent or long-term residents, a figure that hardly changed from that 10 years previously. A further 488 civilians were living at Mount Pleasant with military personnel, the number of whom is usually estimated at 2,000. Among the civilians at Mount Pleasant males outnumber females

The permanent population has been roughly static since the beginning of the century, though in 1980, two years before the Argentine invasion, it had fallen to the 20th century low of 1,813 - its

lowest level since the 1890s.

The central message of the census is to confirm what any resident already knows: the continuing drift of population from the countryside, known in the islands as

camp, to Stanley.

The population of camp fell 31 per cent in 10 years from 653 in 1986 to 445 today, although the rate of decline has slowed since 1991 when the population was 511. anwhile, the population

of Stanley grew to 1,636 last year from 1,580 in 1991, and 1,232 in 1986. However, this hides significant turnover in Stanley's population since

Only 800 of the 1996 residents of the capital were living there 10 years earlier, 208 were living elsewhere in the Falklands and 417 were liv-

Mount Pleasant - 1,267 were

born in the Falkland Islands. 885 in the UK, and 265 in Ascension Island or Saint Helena.

The census also shows the islands enjoying full employment. According to the commentary on the report by Mr David Lang, the attorney general, the data would appear to indicate that it might be difficult to accommodate anv new area of eco nomic activity - such as shore-based servicing of offshore related activities without immigration, temporary or permanent, in one form or another.

Other fascinating into life in the islands emerge from the census figures. Although the smell of peat fires is still present in Stanley, many people are switching from this traditional but labour-intensive fuel for heating and cooking. Some 221 households use it for heating - 108 of them in Stanley - compared with 404 in 1991, 248 of them in Stanlev. The majority of house holds now use oil: 610 in 1996

compared with 356 in 1991. The census shows a big increase in private vehicle use in the past 10 years, suggesting that it is probably the territory with the highest per capita four-wheel drive vehicle ownership in

the world. There were 874 four-wheel drive vehicles in private ownership, more than four times the number of cars. Of the 2,607 people present This figure ignores the large on census night last April - number of government-This figure ignores the large including the civilians at owned vehicles and those in

els. The government spends £4m a year on fisheries

FISHING • by Stephen Fidler

Prize catch slips the net

Politics and overfishing lead to dwindling reserves of precious squid

Every year in late February and early March, people in the Falkland Islands begin eyeing nervously the migratory patterns of a type of squid. For on this squid -Illex argentinus - has hung for a decade much of the fortunes of the islands.

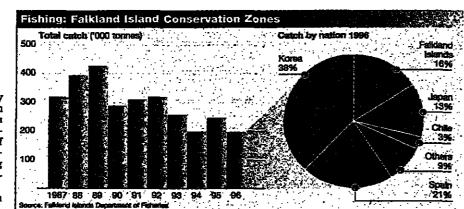

The illex squid, prized in the Far East, begins its oneyear life on the continental shelf of Argentina before moving out into the high seas. It then drifts back towards the coast, usually passing through the 200-mile limit around the islands. If the squid use another route. the chances are reduced that fleets will buy licences from the Falklands government.

Illex licences have generated much of the £245m collected in licensing revenue by the Falklands since the 150-mile conservation and management zone came into effect in February 1987. It was extended to 200 miles in December 1990. Before 1987, the sole earnings from fishing was the £1m-£2m a year taken for permitting the shipment of fish in the safe waters of Berkeley Sound.

However, the Falklands' illex licence revenues have fallen since Argentina invited foreign vessels into its waters in 1993, offering lower licensing fees and export subsidies and attracting, for example, most of the Taiwanese ships fishing the

in Argentine waters was or simply corrupt. For their more than three times the 79.803 tonnes caught in the admit a difference in Falklands zone. Even given some exaggeration in the Argentine number - export subsidies may be encouraging over-reporting of catches - illex are also being hoo-

vered up in the high seas. "The primary issue for the fisheries is conservation." said the Falklands' director of fisheries, John Barton.

fishing effort, we think there is likely to be a collapse in the illex stock."

There is a procedure for dealing with this: the South Atlantic Fisheries Commission, on which sit officials from Britain and Argentina, with observers from the Falklands as part of the British delegation. Both sides agree the commission has been useful in creating a modus vivendi for fishing in the region and for sharing information.

However, though both governments have in recent years closed the illex season early to conserve stocks. they have yet to reach a long-term agreement to limit fishing. This is seen as a necessary step to create a credible international consensus for restricting fishing on the

The failure to agree a long-term accord is usually blamed by the British side on the Argentine ministry of agriculture and fisheries, Last year, the illex catch as too close to the industry part, Argentine officials approach between the foreign ministry, which would be more inclined to agree a long-term framework, and the agriculture ministry.

The Argentine government has also expressed concern about what it says is overfishing of the blue whiting in Falkland waters. However. the Falklands government expresses some incredulity on the stock in Argentina at this. Mr Barton says there and in the high seas. If there are six vessels fishing for

is no overall reduction in the blue whiting, which is any 1988 with seven private case a low-value fish mainly used in fishmeal, compared with 150-160 fishing for illex in Argentine waters alone. The blue whiting catch last year in the Falklands waters was 23,515 tonnes, down on

38,825 in the previous year. The second most important species to the Falklands economy in terms of licence revenue is the loligo, or Patagonian squid, the type favoured in Spain. The catch last year dropped by 38 per cent compared with 1995 to 61,360 tonnes, and the government continues to limit the fishing effort.

'We have more applications for licences than we can issue, but we don't compromise on the conservation thing. With loligo we have sold 14 licences for about £3m. We could easily have sold 35 licences and got much more revenue." It awarded 19 licences in 1996.

With loligo, the govern- nies. ment has had more success in involving Falklands comwith Spanish companies proving more open than those from the Far East to sharing the fishing effort. Licences are issued according to a points system. which awards extra points if local investors are involved. This has led to the successful emergence of Faiklands fishing companies such as Fortuna and Argos Evergreen. The result has been a growing number of ships

registered in the Falklands. According to Mr Ian Thomson of Argos, the company which was created in shareholders, it took four years "to understand the business" and to turn a profit. Now it is diversifying into other fishing areas - for example, to South Georgia and Saint Helena, where it is establishing that territory's first cold store for fish. It also has a 5 per cent stake in a consortium led by Amerada Hess to explore for oil

north of the Falklands.

licences has proved a more effective and less costly way to allow the domestic economy to benefit from fishing. The government's early attempt to do this led to some some costly disasters, was Seamount, one of a series of joint venture companies set up between Stanley Fisheries, a subsidiary of the Falkland Islands Development Corporation, and independent trawler compa-

Stanley Fisheries had a 51 per cent stake in Seamount Aberdeen-based company running a small fleet of ships to service oil and gas rigs in the North Sea, had a 49 per cent interest. Seamount bought two trawlers and refurbished them, but they proved unsuitable for the task required.

Officials say the actual ses to the government of that venture were nowhere near the headline totals of £25m-£30m, but the losses ran into millions and the experience was enough for from such ventures.

FARMING • by Stephen Fidler

Sheep are not paying their way

Getting agriculture right is a massive priority for the government

For most of its history, farming has been the main-stay of the Falklands economy. Originally a cattle economy - the Lafonia region in the southern part of East Falkland was a cattle plain - sheep farming came to dominate and has resisted many attempts at agricul-tural diversification.

For more than a century, farming was controlled by absentee landlords who installed farm managers, usually from the UK, to run the farms. The largest landlord was the Falkland Islands Commany, which at its peak owned 46 per cent of

This semi-feudal system was identified as a critical weakness by Lord Shackleton in his reports on the Falklands economy for the UK government in 1976 and 1982. Ending absentee farming was required to "stem the flow of funds from the islands and to encourage reinvestment of profits", he

The government oversaw the splitting-up of the large farms, resulting in a radical change in land holding patterns. But the problems of the farming economy remain as difficult as ever.

When Shackleton made his recommendations, there were 35 farms. Now, after sub-division, there are almost 100. The average farm is 33,600 acres, with an The points system for average of 8,200 sheep. Each of the more than 700,000 sheep on the islands requires more than four acres, a ratio which indicates how poor much of the land is.

Absentee ownership ended in 1991, when the FIC sold

holdings, nearly 900,000 acres, for about 28m to the Falklands government. FIC has one small farm left, and about 40 islands, kept mostly for conservation. The proper ties sold in 1991 form Falklands Landholdings.

The problem faced by sheep farmers is the wool price, which has been falling in real terms since 1974. The price fall accelerated in 1989, soon after many of the subdivisions took place. The new owner-farmers were left with mortgages which they could not service because of falling revenues from wool. This has accelerated the drift of population from camp, as the islanders call the countryside.

There has since been some recovery in the wool price but not enough to change the unfavourable arithmetic for the new owners. Sub-division has increased productivity per head, but returns per acre remain little changed and the total gross value of wool sales is about £3.5m.

This has left the government paying large direct and indirect subsidies to the farmers - a situation that is likely to continue. "Agriculture is extremely undercapitalised, and the gearing is too high," said Mr Andrew Gurr, the government's chief executive.

The consensus in the government is that there is little choice but to continue to direct revenues from fishing and from oil, if there is any. to try to sustain farming. This includes improving infrastructure that makes transport from the West Falklands to Stanley almost as expensive as it is from Stanley to the UK.

A consultation document on the future of agriculture has been prepared by Mr Gurr. "No more land can be made," it argues, "fish revenue may be transient, oil may not materialise: there-

Roger Spink (left) and Terry Spruce, directors of the Fall

Mr Gurr said: "The solution is diversification."

Mr Hugh Normand, general manager of the govern-ment's Falkland Islands Development Corporation, said this should be aimed in the first place at import substitution

According to Mr Gurr, the land owned by government can play an important role: "Falkland Landholdings is a giant trial farm that can be used in the process, though it's a commercial business and has to make a profit."

In other measures being taken by the government, the FIDC is, with the help of European Union money. building an abattoir that will meet EU standards. This will allow the islands to increase exports of mutton, and more significantly in the

short-term, to supply the Mount Pleasant garrison, which currently has to import its meat from Europe because Falklands meat is not killed to EU standards. The slaughterhouse will

enable older sheep to be sold for meat instead of being shot and often thrown into the sea. It should also encourage cattle farming cruise ships and the military and allow for substitution of other types of imports.

Another part of the plan is

to encourage soil development, something of a holy grail in the past. The Falklands soil is acid and peaty, and there is almost no bio- toes as they can from 5,000 the most publicised of which almost all its remaining fore getting agriculture right logical activity. According to acres of sheep," he said.

is a massive priority for the Mr Bob Reid, director of agriculture, the key to developing the soil is to find a legume – a plant that transmits nitrogen into the soil that can grow in acid soils.

The white clover that performs this function in Europe is not happy in Falklands soils. However, there are other candidates, including species of plants from the Faroe Islands and Iceland, that may do the trick.

Although Stanley is on London's latitude, the sea is much colder because there is no Gulf Stream. Cold summer winds therefore also thwart growth, a factor which has thwarted tree planting attempts.

Some farms have supple mented income through tourism. Another successful attempt at diversification has been the dairy farm on East Falkland, which provides an important proportion of the islands' milk. The pasture is improved by nitrogen fertiliser in quantities that would be uneconomic over a larger area.

A hydroponics market gar den supplies much of the domestic needs for tomatoes, salad plants, herbs and vegetables, as well as incoming garrison. Mr Tim Miller, a former sheep farmer who runs the enterprise, is trying to persuade farmers to move for example, into potatoes. "They can make as much money from an acre of pota-

MONOPOLIES • by Stephen Fidler

Too few round the table

The population is not big enough to give competition policies a chance to succeed

The sheer smallness of the Falkland Islands economy makes it a curiosity and generates peculiar economic problems. One that confronts the 2,200 islanders. It runs the internal air serevery day is lack of competi-

Whereas a monopoly supplier can usually make handy profits, the advent of a competitor would probably ensure two companies making a loss. In the public sector, meanwhile, efficiency is often low. But the incentive to privatise, thereby creating a private monopoly, is also

"The economy is so small that we could get away from government monopoly that's at least answerable to the people only to create a private monopoly in its place." said Mr David Lang, the

attorney-general.
"We are looking to privatise. Nobody here is wedded to the idea of a big govern-ment. It's unhealthy but it's not easy to do something about it. Take electricity supply. What public benefit would there be to privatise it? We'd have to regulate it and it would probably leave the same people doing the

pessimistic that any likely increase in population arising from oil development would do much to alter the situation. "We'd need a population of 20,000 to sustain competition," said Andrew Gurr, the chief executive.

The government is the monopoly supplier of electricity and water, the country's largest landowner and by far its biggest employer. vice. However, it has recently privatised waste collection in Stanley.

It has also contracted out the management of the port, Fipass. A tender will be opened this year to take over the management of the port from November. At least one councillor believes that, with the possible influx of oil business, competition could be introduced into the port. Others are doubtful.

Until November – and possibly afterwards if its bid succeeds - the port is managed by the second most powerful entity on the islands, the Falkland Islands

The FIC used to own 46 per cent of the land on the islands. It has sold nearly all of that, but still employs 120 people, making it the second largest employer in the islands. It turned over about £14m last year.

Created by an 1851 royal charter, it is now owned by the troubled British company, Anglo United, Among other things, the FIC runs the Darwin Shipping line, controls more than 80 per cent of all retail sales in the island, is the agent for the biggest selling vehicle. Land Rover, runs the largest travel agency as well as providing warehousing and other port services. It has, however, stayed out

of direct participation in the fishing and oil businesses. "We consciously made a decision that we would act as agents. That's the business we know," said Roger Spink, a director. Critics say it does not have to try too hard to make money. The company argues that it is an important and continuing investor in the economy.

However, it has no interest in the domestic fuel and ship bunkering market because that is run as a monopoly by Stanley Services, a lone survivor of a raft of joint ventures created by the government in the second half of the 1980s. It has a monopoly until 2023 for fuel supplies unless the government exercises what would probably be an expensive option in

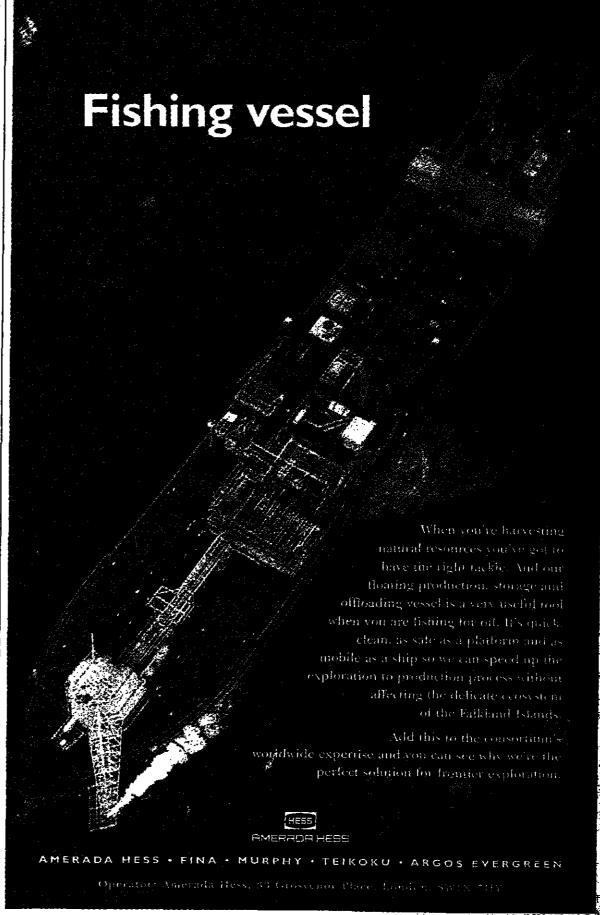

2003 to break it. Stanley is still 45 per cent owned by the government, 30 per cent by Hogg Robin-son of the UK, and 25 per cent by S & JD Roberts, a private company based in the Orkney Islands. The justification for the monopoly. says Robert Rowlands, general manager, is the 54m investment made by the company in fuel storage that otherwise would not have been made.

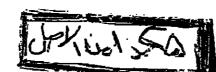

Cable & Wireless, the telephone monopoly, is building another earth station to increase international capacity. C&W is planning this year to introduce the Internet to the islands, which already have the highest per capita fax ownership in the world. It is also studying with Schlumberger - the supply of communications to the oil industry.

International telephone charges - \$1.50 a minute and £1.20 off peak - raise complaints, particularly at the military base, where some £2.000 of daily calls are made to the UK. But the market could almost certainly not sustain two suppliers.

Standard Chartered opened its doors in 1983, taking over the deposits of the old government savings bank. The need for a bank was emphasised by Lord Shackleton in his reports on the islands' economy and Standard Chartered now has some £31m in assets. How ever, islanders complain that its deposit rates are too low, and that the bank is too can tious with credit, particu-

The bank limits itself mainly to personal loans, working capital. But if businesses have a request for a loan turned down, there is nowhere else down the

Management education is firmly on the agenda at Oxford but progress is slow, says Della Bradshaw

A very British

Management Studies at Oxford. But his arrival will be with more of a whimper than a bang. Kay, who has advised Labour

leader Tony Blair on economic issues, has decided to take up his position on just a part-time basis and will not go full-time, he says, until siting and funding issues are resolved. Ray has given the university a deadline of July 1. "This thing has to be done properly or not at all," he says.

The central issue is whether the university community is prepared to commit to the big idea as pro-posed by Kay and Saudi entrepre-neur Wafic Said, who is donating £20m for the building. That is for a city centre business school with sufficient funding for facilities and salaries to enable Oxford to compete internationally with, say, Harvard, Wharton or Insead.

Today the school is in temporary lodging at Oxford's Radcliffe Infir-

up his position as the first But the lease runs out in 1999. director of the School of The university is expected The university is expected to present Said with a final list of prospective sites in the next few weeks. "What's important to him and me is that it's a reasonably prestigious site," says Kay.

Second, and more fundamental, is funding for facilities and sala-ries. At the moment Oxford academics are paid the same whether they teach classics or management. A top professor earns just £36,000. London Business School, by com-

parison, has an annual faculty bill of more than £6.4m for its 100 full-time and nine part-time staff. Kay is looking for a mechanism to be put in place by July 1 to ensure adequate funding for facilities and faculty remuneration. These could be funded through endowments or the premium fees charged for MBA courses.

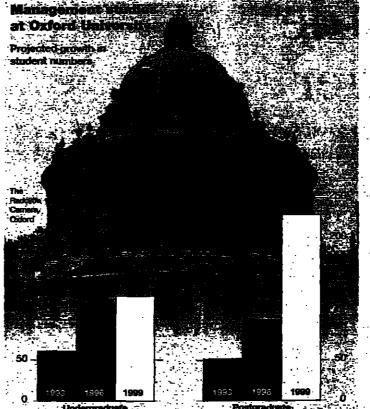

In the short term the school of management studies has sidestepped the salary issue by playing to its undoubted academic strengths mary in a refurbished suite with and using faculty from other study rooms named after local riv- departments within the university

oday John Kay will take ers – Evenlode, Isis or Cherwell. – economics, say, or accounting. This approach will continue to be the hallmark of management education at Oxford, says Kay. "It will be the most intellectually rig-orous business school in Europe," he says. "That's what the Oxford positioning dictates."

Forty-nine students at the management school are already proving the point. This summer they will complete their one-year course and become Oxford's first MBAs. The 49 MBAs are, by all accounts, an impressive bunch.

Their average GMAT score is over 650, says Anthony Hopwood, deputy director (MBA), and they include five Rhodes scholars. They are also a truly interna-

tional mix - another part of the Oxford positioning, says Kay. Thirty per cent are from North America; 30 per cent from Europe (including the UK); and 20 per cent from south-east Asia. The average student age is 27, pitching the school in direct competition with top courses in Europe and the US. Although it is the flagship

Later this year the school will launch a doctoral programme and there are already well-established

undergraduate programmes. "Management is becoming very much part of the Oxford scene and is generally well accepted throughout the university," confirms Colin Mayer, deputy director (academic).

Satellite office gives Chinese advantage

The business school at the University of Michigan, in Ann Arbor, has opened a permanent satellite office n Hong Kong. The intention of the school is to increase its executive education portfolio in China and

her areas of south-east Asia. In particular it wants to develop closer relationships with companies in the area. University of Michigan: US, 313 753 9467

Managers rise to the challenge

The Institute of Directors in the UK is now drawing up the list of participants for its IoD Strategic Challenge, a business game for senior managers.

Designed for teams of up to six players, the challenge takes place over 14 days. Each team has to write a business plan and then implement its strategy to achieve growth over a five-year period. Bookings for the 1997 challenge have to be received by April 4. IoD: UK, (0)171 730 6060

How to choose the best short courses

With so many short executive courses on the market, the choice of a relevant programme can be a nightmare.

The Economist Intelligence Unit in the UK has now published the 1997 edition of its critical guide to the world's best management develo courses to help companies

negotiate the maze. The guide, which costs £145, looks at training companies and consultant vell as business schools. EIU: UK, (0)171 830 1007

Export qualifications on the syllabus

business are soon to get their own NVQ - natio vocational qualification. In June the British Chamber of Commerce and the Institute of Export, together with express carrier DHL, will launch NVQs at levels 3 and 4, suitable for experienced managers. The course will be available through distance learning. Chambers of Com (0)171 565 2000

maker Drake Bakwhen talk show host Rosie O'Donnell convinced model Cindy Crawford to eat a Ring Ding on the air last autumn was wondrous. A few bites of the creamcentred chocolate cake sent demand for Drake's products surging. At some stores, sales rose 11 per cent over the previous year.

Television and films have always had a big influence on consumers. Since the 1970s, companies have paid large sums to have their products used as props on the small and big screens. But the past six months have seen a curious development of acute interest to marketing folk: talk show hosts who dedicate large portions of their time slots to specific products simply because they like them.

The impact of popular chat shows can be stunning. O'Donnell turned a toy called Tickle-Me-Elmo, made by Tyco, into a blockbuster when she flung it into the audience at humorous moments during a broadcast before Christmas. Demand for the toy hit the roof. Shortages were so serious would-be owners offered thousands of dollars for Tickle-Me-Elmos.

DAMASCUS lmman

Amon Cohen urges keen executives to face up to reality and use their time during flights to relax

eller has clambered with good intentions and enough paperwork to last the entire flight. Strange, then, how the passenger's attention usually lapses by the time the warmed

Some keen young executives seem to do interesting things with their laptops throughout the journey but, assuming they are analysing spreadsheets and not duffing up aliens, are they getting anything useful done?

Most unlikely, says Farrol Kahn, director of the Aviation Health Institute. "The idea of working on board is a bit of a myth," he says. "In the first hour or two of a flight everyone is busy on their laptops, but then they settle down to a soporific state.

There is 25 per cent less oxygen on board an aircraft than on the ground and the most sensitive organ to lack of oxygen is the brain. Some people are surprised when they look at notes they have written while in the air and compare them with what they would

normally achieve on the ground." If you would still rather work than watch the movie or sleep, prepare tasks that are appropriate for this unnatural environment.

"I advise people to relax or do something creative, such as preparing a speech or dreaming up new ideas," says Kahn. "It is in that state between consciousness and sleeping that we can be at our

Given the difficulty of working on board, it is hardly surprising that airline office facilities are relatively rare. Telephones are catching on, but usually for outbound corner of the airport to spread out calls only. Fax machines are very your papers, but on board you can Athens, she says, forget it.

Don't pack your work ethic

rare. Airlines that offer them include Singapore Airlines, at \$13.50 (£8.40) per page and Air Canada – which admits that

usage is low. Air Canada has dropped its offer of complimentary use of laptops. But some airlines have introduced power points for laptops in their aircraft seats. Among the innovators are Delta Air Lines and American Airlines.

Kahn believes it is far more sensible to attempt to be productive on the ground, especially if the traveller can gain access to an airline lounge. "This can be an oasis of calm," he says.

"If you are a cardholding frequent flyer, you could even take your secretary along for dictation. The airlines are usually happy to allow this as long as the secretary brings a passport and arrange ments are made in advance."

One frequent traveller who agrees that airports are more productive than aircraft is Liz Craig. a Paris-based American who is president of The Marketing Department, a small business marketing company. She confines her work on flights to reading, but gets through much more awaiting departure or in transit.

"Before a flight you can pick a

think you are going to get six hours of work done only to find there are noisy children sitting next to you," she says.

"I have now recognised that an aircraft is the wrong environment for work. For the ground, I plan a sequence of tasks, each of which can be done in 20 to 30 minutes

In the first hour or two everyone is busy on their laptops, but then they settle down to a soporific state'

and which can be interrupted. It is a question of organising your se differently.

She believes the time at airports is so valuable that she will even try to use departure and transfer airports which offer the most conducive working environments.

In the US St Louis is a better bet than Atlanta, where the distance between gates leaves little time for anything but scrambling for your flight. In Paris Liz Craig prefers Charles de Gaulle to Orly because there is more sesting and it is lighter and more airy. As for

Whenever possible Craig will use an airline lounge, if only because it offers modem points not usually available in the general public spaces. With a little chutzpah, it is even possible eet into lounges where one is not a member.

"The best way is to wave a frequent-flyer card for another airline at them and say you are interested in trying their lounge and joining their scheme," she says. "Some won't let you in and others will charge you maybe \$20 or \$25 - which is worth it if you are stopping over for six hours but some will let you in for

Craig has a tip for ensuring that distractions are kept to a minimum - wear a personal stereo. "That way you can create your own background noise, and it will also stop people talking to you."

Apart from modern points, most airline lounges contain telephones, fax machines and photocopiers. Some have space for meeting rooms.

One or two airlines are attempting to become even more high-tech. American Airlines has just introduced high-speed Internet kiosks at its Admirals Club and Executive Center at Chicago O'Hare International Airport. With access charged at 33 cents a

minute, users can gather business news, stock reports and weather information. They can also send and retrieve e-mail.

The Internet can be accessed at Air Canada's well-regarded Xerox Business Centres in its lounges at Montreal, Toronto, Edmonton and Vancouver airports. Calgary, Ottawa and Halifax will follow

Some would say that the most productive use of time en route to children. an overseas business meeting is to get some rest. Singapore Changi Airport, which has evidently seen

one too many passengers con torted across three seats and their armrests, has recently expanded its transit hotel in Terminal 1 to 120 bedrooms. A six-hour stay

costs between \$35 and \$40. Facilities at the hotel, operated by The Oberoi Group, include a gymnasium, sauna, swimming pool, bar, coffee-shop, hairdress-ing salon, karaoke lounge and facilities for disabled people and

And yes, if you really insist, the hotel has a fully equipped business centre

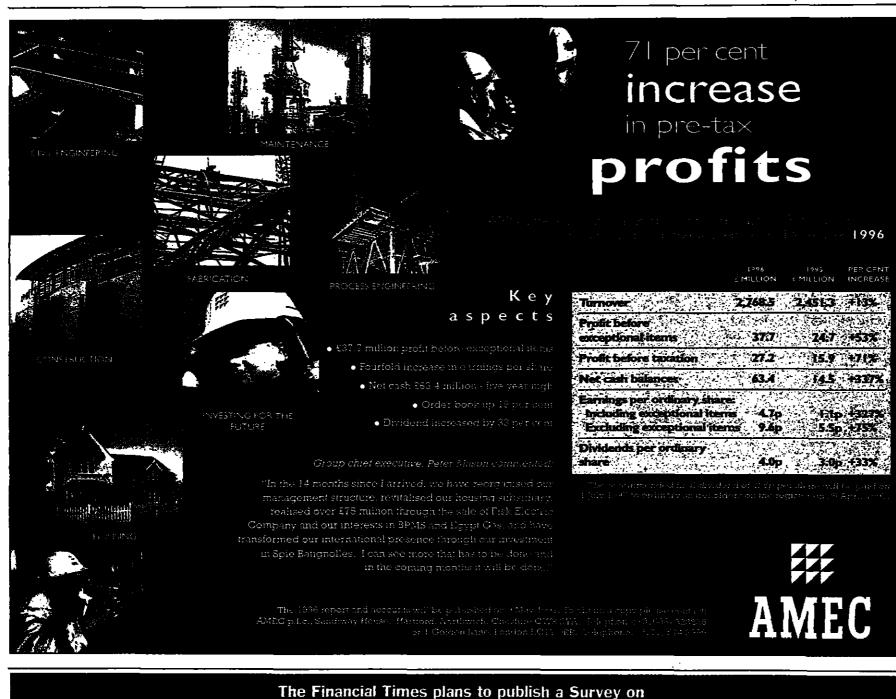

Room to do the business.

ometimes it's hard to get what you want from a conference hotel. The meeting-room is booked, you all have rooms on different floors and, worst of all, you are tripping over holidaymakers and honeymooners when you are supposed to be

working. But, for those who will swap their tropical resort for the English Lake District, there may be an answer. The brainchild of Roger McKechnie, the man behind the Phileas Fogg crispy snacks, the Samling at Dovenest is a 10-bedroom hotel exclusively for groups. Although set up as an English country house, the Samling, on Lake Windermere, has a meeting room accommodating up to 24, a theatre which holds 90, well as Internet access, to vision and video facilities.

Jeremy Williamson, a partner in Charlton Williamson, the Newcastleupon-Tyne accountants, says that after a partners meeting there, he plans to go back. The setting, however, threw up an unexpected challenge, says Williamson: "The only problem was for a jogger – going along roads without pavements.'

Summoning Grosz's dreadful cast

William Packer admires the graphic artist in the painter

he renewed inter-est in European art of the first part of the twentieth century continues with two coincidental exhibitions, one in London, the other in Venice, of the work of the German satirical and polemical painter, George Grosz

Although they cover more or less the same ground, the two shows are more complementary than not. The one in London is more comprehensive, up to the point of Grosz's departure for New York in 1933, one step ahead of the Nazis. That in Venice contains' much previously unexhibited graphic material, along with Wild West, the extraordinary fantasy upon America that Grosz painted during the first world war, and which sold last year for a record for the artist of £1.48m.

Grosz has long been more familiar to us than any other German artist of his time through his association in our minds with the defeated and decadent Germany of post-war inflation, the Weipower of Hitler and the Nazis. For he it was, more than any other, who fixed its image upon our collective retina. He was not the only artist, nor, good as he was, necessarily the best - Schlicter, Dix, Heartfield, Hubbuch, Schad, Beckmann and the rest all had their moments. But he it is who still summons up for us that

teers, prostitutes and cor-rupt politicians. When we and manipulation of the and Well and Sally Bowles, we think of the Berlin of George Grosz

But, memorable and fasciwas all rather a long time ago. That is not to say that the work has lost its intrinsic quality, but only that we are less engaged, our interest in the matter of Grosz's polemic now more academic than personal Even in the 1960s, I can remember its power still actually to shock I have to say it no longer does. Such is the fate and limitation of work so rooted in the particular issue or controversy, no matter how profound or just the cause. This leaves us with the

work, not for the message it. carries but for what it is itself. And if the work is good enough, that is no bad thing. It is precisely so now with Grosz. At last we begin to see the wood that we always knew to be there but, distracted by each tree. post-war inflation, the Weinever really considered mar Republic and the rise to whole.

drawing as drawing, the water-colour as water-colour, the paint as paint. At whichever of these two shows you find yourselves - and why should it not be both? -Grosz's technical command has never been more clearly demonstrated.

Of special interest, in the

think of the Berlin of Brecht image by which, even in the he puts the formal devices of anecdotal use. The freedom nating as it all may be, it they gave him to compile, condense and overlay image upon image, incident after incident, while yet retaining a sense of a clear and coherent pictorial space, has carried its example down even to our own day, most clearly of all perhaps in the work of the American painter long resident in England, R.B.

gain he was not alone in his oppor-tunism. The dissemination and exploitation of the Cubist lesson in the years after 1910 was as rapid as it was various, from Kandinsky to Mondrian, Chagali to Boccione. With Grosz, it is the pictorial dynamic, the sheer visual energy it gave the work that was to prove an abiding gen-eral characteristic. Only the And how good that work is wilfully blind cannot see as work, how enthralling the how lively cubism can be. It is the dark, satirical urban-ity in Grosz's use of it, informed by a wonderfully inventive visual wit, that is

quite his own Grosz was essentially a graphic artist, in that his gift Venice, until May 18: supwas founded upon his mastery of the drawn line, whether with brush or pen-

richly dreadful cast of profi- drawing and painting alike, cll, with its infinitude of ion. That mastery itself was founded in the long disciearly years of the Great War, plines of the life room and the scrutiny of the model. Cubism to descriptive and All this we see; and while we may relish the sheer, fluent expansiveness of the watercolours, the succulent pink flesh of the girl with her pig ter, it is the drawing in the paint that does it. The straightforward portraits after the manner of the New Realism of the 1920s. Lotte in her green dress and brown cloche hat, are the careful Kitaj. Theatre / Alastair Macaulay

An exceptional King Lear

The barnacles of theatricality, style, and interpretation seem to fall away from King Lear in the National Theatre's new staging. I envy anyone for whom this is his or her first King Lear. Often, wonderful to say, I felt as it if it were mine.

Two features make this Lear protagonist. The director, Richard Eyre, has placed it in the intimate Cottesloe Theatre, so that - whereas we have grown used to having Lear oracularly hurled at us across some mighty encompassed by its volcanic flow of detail. The grand manner, which can elevate Shakespeare's purple passages but bog down the drama, is wonderfully absent.

Ian Holm's Lear is this production's ideal centreplece. He can growl: "Who am I?" quietly, like a lion. He addresses the elements ("Let fall/ Your horrible pleasure") as if the lightning and thunder were passing through him like grim shocks that he craved. To talk of Holm's conception or characterisation of Lear is almost to miss the point. Indeed, he seems to miss his own point in two physical respects: the shortstepping old-man plod and the for patience; or, later, of how gumless chewing motion he occasionally deploys are the kind of characterising effects that here seem superficial, inorganic. No, the way it lives in the line - the way it makes you feel anew the a few scenic coups de théatre as

ian Holm as Lear and Amanda Redman as Regan

word, and yet makes these sound spontaneous, new-minted.

the onset of madness, he contemman no more than this? Consider him well," with a flash of Hamlet-like philosophical inquiry out and utterance. of nowhere. I have never been so aware of how quickly Lear's Paul Rhys's Edgar is already mind shuttles between intemperate explosiveness and the quest seamlessly it shuttles between

sanity and madness. This is much the finest Shakespeare that Eyre, during his time at the National, has given us. Bob Crowley, designing, provides

surprising developments of when the set's two tall walls fall Shakespeare's thought in every smack on the floor between them as the storm commences - and the best thunder and lightning Suddenly, amid the storm and for years; but, in general, the visual simplicity is very gratifyplates Poor Tom, and asks: "Is ing. Likewise, the acting attends relatively little to surface characterisation and keenly to interplay

> The anguished compassion of excellent he will be twice as good when he relaxes his face more and interprets his lines less. Finbar (formerly Barry) Lynch is (though a little underinflected at first) an attractively dangerous Edmund. As their father, Gloucester, Timothy West has a rational naturalness that gives new impact to tiny lines

such as: "Here's France and Bur gundy, my noble Lord" but underdoes the torment of mind he undergoes after blinding. Michael Bryant, a classic Gloucester eleven years ago, now brings beautiful tenderness and fun to the role of the Fool.

Anne-Marie Duff, in a perforboth Cordelia's devotion and her steel. Amanda Redman stings immense glamour and edge to Regan. Best support is Bayoara Flynn as Goneril, uttering the lines with a superbly changing amalgam of wit, scorn, impulsiveness, bitterness, desire, and dismay. Just to watch her listening (her chin suddenly quivering as Lear says "We'll no more meet") is, moment by moment, gripping, This production does not impose itself upon the play. Instead, it reveals, with a transparency very rare in Shakespeare

today, the play's complexities, its themes and its chameleon changeability. What price honesty? Are we he playthings of fate and/or the stars and/or the gods? How to test true from false, even in people we think we know? How keep patience? How see truly until too late? What price enlightenment? These motifs keep

returning, here with brilliant

his alert, easy command in two concerts here displayed a maturity beyond his 32 years. Birmingham seems to have struck lucky. I heard him conduct the Finnish Radio Symphony in a televised children's concert. The main offering was Mio. poikoni Mio. a long dramatic tale for big orchestra and hyperactive narrator (Susanna Haavisto: imagine Giulietta Masina on speed), with a thoroughly professional score by Timo Hietala. Oramo brought it off with good humour and perfect

n the Biennale proper, he conducted Pehr Henrik Nordgren's Symphony No. 8. the American Christopher Rouse's Iscariot and the premiere of Jouni Kaipainen's piano concerto - a programme that must have suited the eclectic tastes of this year's Biennale director, Eero Hāmeenniemi. Nordgren's symphony was all earnest Nordic gloom, with few traces of the modernism he once espoused; Rouse's Iscariot (which must have a hidden scenario, though we were not told) is very much school-of-John-Adams, in which anything goes, from devout string chorales to wild

Helsinki Biennale percussion blasts, Kathainen. unlike his close colleague Lindberg, seems also to be beating a retreat from modernism. His irresistibly jaunty concerto took Prokofiev as its undisguised model – jokey tunes, splinters, percussive pianism (which Juhani Lagerspetz addressed with a will). Perhans Oramo will try it on Birmingham; it is a clever piece, more substantial than its bright surface might suggest.

A theme that Hameenniemi pushed this year was crossover Layapriya did not take it far just a pleasant post-romantic orchestral sketch with interludes for four expert Indian percussionists, scarcely integrated. It was enterprising of him, though, to have dug up some forgotten John Foulds (1880-1939, British, greatly taken by Indian music): we actually had the premiere of "Three Mantras", which are all that remains of his grand opera project Apatara. Foulds' worthy intentions took square-cut forms, musically more naive than the real thing.

Much more exciting was another rediscovery, Colin McPhee's pioneering Tabuh Tabuhan from 1936 - often cited in textbooks, almost never played. McPhee was devoted to Balinese gamelan music, and this "toccata for orchestra and two pianos" adauts Balinese rhythmic patterns to a Broadway-flavoured band: exuberant "minimalism" from the very year in which Steve Reich was born, and great

eform of the Bank of England is on political the agenda. Mr Gordon Brown, the shadow chancellor, has proposed the introcil at the Bank, to depersonalise its decisionmaking and prepare it for greater independence.

More profoundly, the Bank would achieve total independence - and an equal degree of impotence in setting UK monetary policy - if Britain joined the EU's economic and monetary union (Emu). In this article. I would like

to make proposals on how the UK's monetary arrange ments should be changed to erve the public better. I shall assume for this purpose that the UK will remain outside the single currency for a considerable period, since many of the issues discussed here do not arise Britain joins in the first wave. But the uncertain prospect of Emu membership cannot handicap the search for better institutions

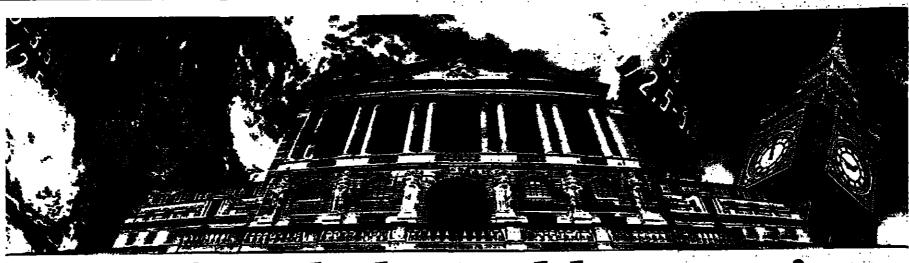

in the present environment. There should be two main objectives in introducing reforms. The first is to ensure they are consistent with what economists have learned in the past decade about the relationship between central banking and the economy.

The second - not always compatible with the first - is to design a system that is explicitly embedded in the UK's democratic framework. It is not acceptable in a democracy to delegate profound powers to unelected officials without confronting the thorny issues of account-

ability and openness. If the Bank is to be given wider powers, it must be seen to exercise them in the national interest. In particular, it must transform itself into a central bank for the entire nation, and no longer be suspected of being a representative of the sectional interests of the City. I bave sometimes wondered whether it should change its name to the Bank of the United Kingdom, just to emphasise this.

The question of central bank independence has recently been confronted in many countries, yet there is no single blueprint that can be slavishly copied by a

The Bundesbank's record of monetary stability is posed to believe in free talk of the objectives of ent chancellor.

Freedom balanced by scrutiny

Gavyn Davies proposes a framework of accountability for a more independent Bank of England

envied by many, but its isolation from the political process would be unacceptable and unwise - in the UK's

democratic system.
The US Federal Reserve has been among the most successful of central banks in the past decade, but the twin objectives set for it by Congress - maximum employment and stable prices - leave too much room for interpretation by unelected officials.

The Bank of Japan, although becoming more independent, is still far too much the creature of the Ministry of Finance to be an ideal model.

The Reserve Bank of New Zealand is an attractive blueprint and is the basis for part of what follows. But its reform is much too recent to be sure it will succeed and it relies too much on the competence and personality of the governor.

So where to begin? First, recent research strongly indicates that central banks which are more independent from the political process are associated with lower inflation rates over long periods. More important, the reduc-

tion in inflation associated with independent central banks is not won at the expense of either reduced rates of output growth or higher unemployment. Nor does it seem to involve greater variability in output rather the reverse.

Economists are not sup-

lunches, yet here they seem to have identified one. And although there have been suggestions that these favourable correlations are due to a bidden third factor - such as the structure of the labour market or the stability of the political system - the basic conclusion seems

reasonably robust. How can this explained? It is consistent with a basic tenet of the dominant wing of macroeconomics, which holds that monetary policy is "neutral" in the long run - that inflation is ultimately not linked to growth or unemployment.

If an independent central bank is on average more inflation-averse than an elected politician, we would expect to see lower inflation, without any average loss to output, in systems where central bankers are given freer rein. This is broadly what we do see.

It might seem, therefore, that the problem is solved: simply tell the bankers to achieve stable prices and let them get on with it. That, after all, is what happens in Germany and it is more or less what will happen in the European monetary union.

But there is a complication. While the long-run level of output probably should not be the concern of monetary policy, smoothing the variations in output around that long-term trend probably should be. When macro-economists

demand management they routinely include both the stability of prices and the variability of output or employment as target variables. This approach recognises there is a short-run role, lasting perhaps two to five years, for monetary pol-

icy to affect real variables. If we were designing a control system to work in engineering, we would probably tell the central bank something like this: please minimise the sum of squared deviations from the inflation target and the long-run GDP growth target, with weights of 50 per cent being assigned to both objectives.

But we cannot afford such jargon when designing a system to function in a democracy. Something much simpler is required.

ince 1992 the UK system has ignored this problem by setting an inflation target in splendid isolation, initially involving a band of 1 per cent to 4 per cent, and now simply requiring prices to rise at "2.5 per cent or less" for an indefinite period.

This has had the great advantage of simplicity, which has increased the credibility of monetary policy. Since monetary credibility has never been the UK's strong point, this was crucial. But even in this period, inflation has not been the sole concern of policymakers, especially the pres-

has done is give some weight to inflation and some to the variability of output or employment - exactly as rested above. The unshot is that the official target has not captured the true behaviour of the policymakers.

I would argue that this will eventually harm policy transparency, and that such confusion must stop. Any durable system should set targets which accurately describe the actual objectives of the government. The problem is not particularly acute when demand

shocks hit the system - an unexpected shift in demand will move output and prices in the same direction. A policy to stabilise prices does not conflict with a policy to stabilise output.

But when there is a supply shock - say a rise in oil prices - the opposite applies. Prices rise while output falls, so the authorities are forced to choose which variable to stabilise. An immediate return to an unbending inflation target could lead to an unacceptable fall in output. Among other problems, that could cause the public to reject the policy regime.

More flexibility is required. One way of dealing with this is to leave the central bank to decide how to juggle the twin objectives - as happens in the US. But this would not be democratically acceptable in the UK - and

Sir Samuel Brittan has

GDP objective, which automatically gives as much weight to real GDP as to price inflation. Unfortunately, there are practical difficulties, as well as a lack of public understanding of what this variable means. The preference of foreign central banks is universally in favour of price objectives

over nominal GDP. I would therefore suggest the following approach. First, parliament should give the central bank operational independence in setting base rates, the crucial policyvariable in the monetary system. This should be done by the seven-person monetary policy committee of the Bank of England, constituted to include outside experts as Labour's Mr

Brown has suggested. The minutes of the committee should be published on the same timetable as those of the present meetings between the governor and the chancellor, and individual votes should be publicly registered.

On occasions the chancellor or other Treasury officials might attend these meetings, as they do in Germany - but they would have no vote. Their contributions to the discussions would. however, be minuted.

Second, the government would give the monetary policy committee a permanent long-term objective of achieving stable prices,

What Mr Kenneth Clarke been in the vanguard of defined as inflation at 2.5 per those favouring a nominal cent or less on average. The GDP objective, which autopresumption would be that if inflation exceeded this rate temporarily it would run

below the target in future,

implying that in the long

run prices would rise by less

than 2.5 per cent a year. Third, the chancellor could set in the Budget shorterterm target ranges for infla-tion that might deviate from the 2.5 per cent long-term objective. If oil prices rose sharply, for example, the chancellor might specify an inflation rate target of 3 per cent to 5 per cent in the first year, 2 per cent to 4 per cent in the second year, and 2.5

per cent or less thereafter. The government could decide whether, and at what speed, to accommodate supply shocks. But there would be a presumption that inflation would always return to a maximum of 2.5 per cent by the third year. If the government wished to alter the mix between fiscal and monetary policy to achieve a particular exchange rate objective, it could do so under this arrangement.

The advantage of this procedure would be that the elected government would remain responsible for juggling inflation and growth objectives in the face of economic surprises, and would be accountable for doing so to parliament and ultimately to the electorate.

short-term inflation target Sachs

ahead of an election elip transparency of the system would mean the electorat could very easily see what was going on - unlike under the present regime.

se more Meanwhile, the Bank's monetary policy committee would be held accountable by the chancellor and parliament for discharging the narrow but crucial responsibility of hitting the inflation

targets over the periods specified in each Budget. That would be all. There would be no question of asking the Bank why it was allowing unemployment to rise in order to hit the inflation target - this would be among matters to be addressed to the Treasury.

Bank officials would be required to give evidence to the Commons Treasury committee each quarter and the committee would report to the chancellor on the performance of the monetary policy committee. If the Treasury committee decided the monetary policy committee was not discharging its dottes competently, it could recommend changes in personnel to the chancellor who could, if desired, terininate the governor's contract.

therwise, the decisions of the monetary policy committee - taken within the straitlacket of its clearly defined inflation objectives - could not be over-ridden.

This system, which is a close cousin to the one which has worked well in New Zealand, would offer constrained operational independence for the Bank. within a far more transparent framework for overall macro-economic management even than the basically good system which the pres ent government has devised.

It would not only enhance Britain's chances of achieving macro-economic stability, but would also enrich the UK's democracy.

And, unlike other sugge tions for Bank independer it would avoid placing the governor on an unde cratic pedestal - which would enjoy little legitimacy at Westminster and from which he or she would-be swiftly removed as soon as the going got really rough

Real benefits for Europe if euro becomes a reserve currency

Objective is an equitable market

From Mr Andrew Claxton. Sir, Simon Holberton's article. "New generation struggle" (March 25), ques tions the basis of the Electricity Pool's decision to reject the Load Management Agency, a proposal put forward by large customers to promote demand side particination in the electricity market. The Electricity Pool rejected the Load Management Agency on the grounds that the proposal only advantaged large industrial customers at the likely expense of smaller customers, particularly in the domestic market.

This decision was fully supported by the director eneral of electricity supply. I must point out that pool meinbers are continuing to enhance existing demand side arrangements, and cus tomers are involved in this DIOCESS.

The Electricity Pool exist to provide an efficient and equitable trading arrangement in the interests of the whole market. The arrange ments are always under review, and the pool is currently undertaking the biggest programme of change in its history. It involves extensive consultation with customers and it will build on the pool's record of success.

Andrew Claxton. chief executive. The Electricity Pool. 338 Euston Road, 10th Floor. Regent's Place, London NW1 3BP, UK

Russian 'reform' helps only the few

From Mr Edward S. Herman. Sir, Your use of "reform" in reporting on Russia (for in control", March 18) would have delighted George Orwell. In conformity with liberal ideology, you have made "reform" synonymous with unconstrained privatisation and deregulation, irrespective of suitability of conditions, distribution of benefits and losses, and social costs. In addition to stripping the word of its traditional social and moral content, you have even ignored its relation to demo-

cratic substance. Russian "reform" is serving a tiny Russian elite and western interests while

immiserating a large majority. The benefits to the latter are strictly hypothetical and at best long run. Meanwhile, they have no political options as all who would protect them are powerless. or are discredited as communists or "hardliners", and the forces pressing "reform"

people with power. Anatoly Chubais, the symbol of reform, ran for electoral office several years ago as representative of the Yeltsin-reform group, and was embarrassed by receiving less than 10 per cent of the vote. Yeltsin himself,

have overwhelming internal

and western support from

just before the recent election campaign, had a poll approval rating of 8 per cent. munism" and his own record! With western help, the massive and illegal use of state funds, and complete domination of the media, he defeated communism and the "reformer" Yeltsin. Immediately after his victory, he brought Chubais back with a major policy role to press forward with The reform that follows is

based on a political fraud that serves the few at the expense of a still unrepre sented populace. Edward S. Herman

28 Fairview Road, Penn Valley,

Elections are about looking to the future, not the past

From Mr Jon Henning. Sir, Michael Prowse thinks that Britain is today a much better place than when the Conservatives came to power in the 1970s and fails to understand why this does not translate into positive voter sentiment for the current government ("Back home in a better Britain". March 15/16).

Having never lived in

Britain, I cannot comment on the state of the country. but even if the significant improvements Mr Prowse detects are assumed to be real, the bad outlook for the Conservatives in the upcoming elections is easily explained. Contrary to what Mr Prowse seems to assume, elections are not supposed to be a reward for past perfor-

mance, even if they in real-

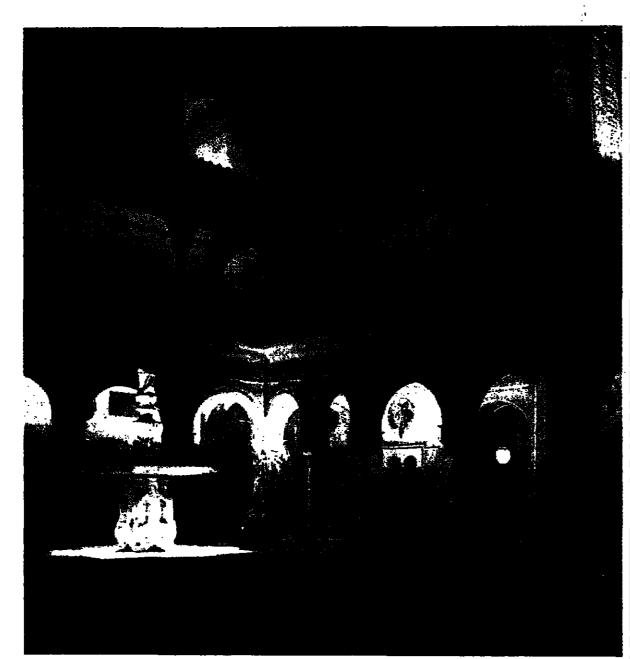

ity often are. The real purpose of elections is to select a government that is best able to cope with the challenges of the future.

Thus, even if voters recognise the past achievements of Conservative rule, they may simply assume that the party has now lost the capacity to improve the country and the lot of its

just another market mechanism. And in a market, those companies have the advantage that offer the best products today; not those that had the better products yes

A false move in India

India's once all-powerful Congress party, to withdraw his support from the country's ruling coalition, is extraordinary. It comes at a moment when the 18-party United Front minority ment, a fragile mixture of leftwing groups and regional parties, seems to have forged a coherent strategy both on domestic and foreign policy. That could all be in jeopardy if Mr H. D. Deve Gowda, the prime minister, fails to win a vote of

confidence in parliament. exchange tumbled vesterday. Business reaction to the bold tax-cutting budget introduced by Mr P. Chidambaram, the finance minister, a month ago had been overwhelmingly positive. The government's commitment to continuing the essential process of economic liberalisation was no longer in doubt.

On the foreign policy front, there has been a welcome improvement in relations with India's neighbours. Long overdue deals have been struck with both Bangladesh and Nepal. This very weekend, India and Pakistan have held their first high-level talks for three years, described as "frank, cordial and Mr Gowda and Mr Kesri must constructive". There has been—step aside.

The decision by Mr Sitaram serious talk in Islamabad of climate between the two traditional rivals. But that would be called into question by political uncertainty in India.

Against that background, Mr Kesri's move appears baffling. and his motives dubious. He charges the government with economic drift, allowing rising inflation, and the threat of a "growing communal menace" as well as the collapse of law and order. Few would agree that his charges are justified.

No wonder the Bombay stock mauled in the last elections, largely because of the popular perception that it was riddled with corruption. But it has supported Mr Gowda's government from the opposition benches because both are united by their hostility to the Hindu-nationalist Bharatiya Janata party, now the largest parliamentary party

If the latest political upheaval results in new elections, the gain, and Congress will lose encouraging the "communal menace" Mr Kesri says he fears. His party would be well advised to keep the present coalition, or something very like it, in power, even if that means both

Party economics

The most striking aspect of the two main UK political parties' economic policies is the way they are both struggling with the same uncomfortable straitjacket. Labour, as much as the Conservatives, has ruled out large increases in personal taxation, high borrowing or rising public expenditure. It claims to be as strongly committed to stable prices. It might move further than the Tories towards allowing the Bank of England to determine what interest rates are needed to control inflation. Whatever is said on the hustings, both have abandoned the nostrums of the 1970s for ramping up growth with easy money. But despite these constraints. the economic courses set by the

two main parties would be different. It is difficult to be sure how different, since Labour's pronouncements on many policies have, to say the least, lacked detail.

However, the Conservatives can be expected to continue and to raise interest rates if that their programme of opening the economy to market forces: by deregulation, privatisation, freeing up the labour market and by bringing market disciplines into the public sector. More could be done. But after 18 years, returns are diminishing; and such measures become less popular as they are seen by voters to contribute to job insecurity and a widening gap

between rich and poor. Labour has indicated that it Tories' reforms. But it is unlikely to extend them. Its rhetoric of partnership and stakeholding suggests that it advantage from shareholders to consumers and employees.

Much will depend on what it means by this. A touch on the helm to rebalance the regula tion of utilities or to strengthen competition policy, for example,

But it is also possible that the cantious rhetoric of its campaign conceals an old urge to meddle with the markets and to shift power back to a corporatist state. On balance, this does not seem a serious danger, provided that Mr Tony Blair, the leader and Mr Gordon Brown, the shadow chancellor, retain their grip on the party. Even so, the proposals for a windfall tax on utilities, for a minimum wage and compulsory recognition of trade unions would all be moves

in the wrong direction. This would not matter much in office to do what it knows is necessary for the wider economy: to pull the government deficit back towards balance were also required to curb inflation. An immediate fiscal tightening of £5bn or more may be public spending targets endorsed by Labour - are unrealistically tight, that must

mean tax increases A new Labour government might be keen to demonstrate prudence to the markets. But it might be less able than the Tories to resist the facile areument that industry can bear the will not reverse most of the burden without cost to the people.

With a month to go before polling day, there is still time to watch their lips. will seek to shift the balance of **I** This is the first of a series of leading articles on the issues for the UK election on May 1.

Dumping folly

by shooting oneself in the foot. turn it into finished cloth, on Yet that is the curious remedy which the European Commission has prescribed in response to complaints that developing country exporters are harming European competitors by "dumping" grey cotton, a basic commodity widely used in textiles and clothing production.

In November, the commission imposed provisional dumping duties of up to 36 per cent on grey cotton imports from six countries, including China and India. The move followed persistent lobbying by European pro-ducers, whose market share has dwindled to barely a quarter of

EU members are due to decide by Thursday whether to make the duties permanent. They should refuse. The commission's method of calculating dumping margins, which has always been questionable, appears particularly so in this case. Its claim that dumping has cost European producers market share also looks dubious, since EU

sales by exporters in the six countries have stagnated. Furthermore, permanent duties would not solve the European producers' difficulties, ead them more widely. instead of exporting raw grey cotton, their foreign competitors good way to start.

Few problems are made better would have a big incentive to which EU duties are lower. Europe's grey cotton makers on other parts of its textiles industry would increase.

If this incident has any redeeming virtue, it is that it strengthens the case for reform of EU dumping policy. Sir Leon Brittan, trade commissioner, has sensibly proposed that future dumping investigations include a "community interest" test. This would require consultation of a much wider range of interested parties, analysis of market competition and an ent of the costs and ben-

efits of dumping duties. A more balanced approach is long overdue. Current dumping policy is too easily captured by producer lobbies, at the expense of wider economic interests. Its abuse also encourages target countries to adopt their own dumping laws, as many are doing. That trend exposes Euro pean companies to the threat of retaliation and risks undermining the multilateral rules-based system. EU members have everything to lose from such an outcome. To prevent it, they need to exercise restraint over their dumping regime. Dumping the grey cotton case would be a

Fears of collateral damage

Recently back from Japan, John Plender analyses the pressures on the country's banking system ahead of Big Bang deregulation

or the Japanese econ-omy the start to the marks a period of unusually high risk. Not only is growth likely to be substantially below its underlying potential of 21/2 per cent to 3 per cent in the coming year. A full-scale banking crisis cannot be ruled out. Since Japan is still the world's biggest creditor country, any financial upheaval in Tokyo is bound to cause some

backwash across the globe. At first sight this may seem paradoxical, given that Japan was the fastest growing country in the Group of Seven leading industrial economies last year. Still more so, in the light of the recent weakening of the yen, which has provided the economy with an apparent escape route from the liquidity trap in which big companies have not wanted to borrow and small ones cannot find banks to lend to them.

Yet exports, though more competitive since the yen's decline against the dollar from a peak of Y80 in 1995 to around Y124 today. are a relatively small part of an economy which is driven primarily by domestic forces. The boost to the external account may not be sufficient to offset the coming reversal of the fiscal stimulus that provided the real impetus behind last year's growth.

In the current year the government will implement a package of tax increases and social security changes equivalent to Y9,000bn (£44.5bn), or close to 2 per cent of gross domestic product. This is harsh medicine. With the recent buoyancy of consumer spending spurred largely by a desire to beat this month's sales tax increase from 3 per cent to 5 per cent, it is not easy to share the confidence of officials in Tokyo that recovery is now on a

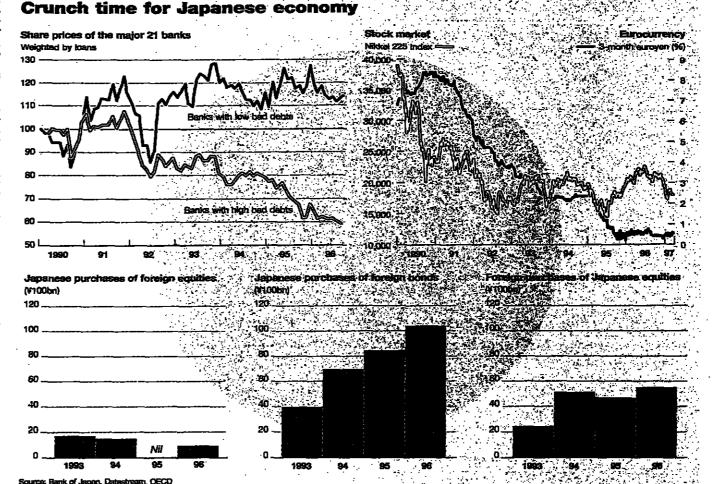

self-sustaining path. The deep-seated problem of the Japanese economy is that it suffers from excess savings in relation to the investment opportunities. Returns in both the real economy and in financial markets are low in relation to asset prices. Since the bursting of the stockmarket bubble in 1990, this structural imbalance has been compounded by a banking crisis.

The Bank of Japan's response has been to reduce interest rates to the lowest level seen in any of the leading industrial countries since the 1930s. But even with the discount rate at 0.5 per cent, accommodating monetary policy is doing more to inflate asset prices in the rest of the world

than in Japan (see charts). bought time which should have been used to address the structural problems of the econby the government of Mr Ryutaro Hashimoto is not notably robust - except in the high-risk area of financial deregulation.

Tokyo's Big Bang, named after the deregulation of the London Stock Exchange in the mid-1980s. will have profound effects. starting with the revision of the Foreign Exchange and Foreign Trade Control Law next year.

around the world. As Ms Mineko Sasaki-Smith, to global competition.

chief economist of Credit Suisse First Boston Securities (Japan) points out, this will force further liberalisation, since any failure to adjust transaction costs in the Japanese markets to global norms will drive business offshore. Increased international competition will thus compel financial institutions to reduce their excess capacity. As the weak founder, the burden on surviving institutions will increase.

Financial deregulation represents a political victory for the young Turks of the international finance bureau of Japan's Ministry of Finance. Ultimately, it will facilitate a restructuring of banking, securities and insurance under a single holding company umbrella, along the universal banking model. Yet a palpable sense of unease can be detected among older officials about the timing and pace of the reforms.

While the radicals are right that the forces of the global market cannot be kept at bay forever, credit rating agency Moody's ment in equity prices. increase the pressure on banks. Since the big write-offs made against bad debts last year, they omy through deregulation. Yet have not raised additional capithe impetus of the programme of tal. And their equity shareholdadministrative reform proposed ings in Japanese industry and commerce leave their capital base very vulnerable to the fluctuations of the stock market.

According to Mr Pelham Smithers, a strategist at ING Baring Securities (Japan), the banks' equity portfolios have not shared fully in the rise in the stock market since its low point in 1995. The chief beneficiaries of the uplift have been the foreign This will give individuals and investors who backed the benefiinstitutions the freedom to do ciaries of a cheaper yen. The business wherever tax rates and banks are more heavily invested transaction costs are lowest in the less efficient sectors of the economy, which are not exposed

new measures to prop up the property market come too late to make much difference to the solvency picture on March 31.

With the Nikkei 225 index closing at just above 18,000 at the end of the financial year, there is speculation that some banks could find themselves in breach of the minimum capital requirements set by the Bank for International Settlements. Between now and May when the bank reporting season starts, auditors will confront difficult judgments on whether client banks can be regarded as going concerns.

Hashimoto's be fully prothe financial community by downgrading the senior debt of Nippon Credit Bank, one of Japan's three long-term credit banks, to junk bond status. The bank is undergoing a painful restructuring amid reports that the chairman is about to resign.

There is talk in Tokyo of the need for one or more large banks to be allowed to fail, to convince the public there can be no solution to the banking crisis - or the wider problems of the economy without using taxpayers' money

to recapitalise the system. Looked at in a longer-term perspective, there are two ways in which Japan can move towards a less distorted pattern of asset prices and returns. Either asset prices can be allowed to fall closer to the levels prevailing in

Moreover, the government's global markets, while deregulation opens up enhanced profit opportunities that raise the yield on those assets. Or inflation in product prices, combined with ven weakness, can be allowed to wipe out the historic burden of

debt in the banking system. The difficulty with the first approach is that it would endanger the banks, in the absence of a commitment to use public money to address the solvency problem. And with borrowing costs absurdly low, there is no pressure on large corporations to raise their return on equity to the levels in the US.

Yet the long-run logic of financial deregulation is that investgovernment has ment returns must equalise with global norms, after allowing for depositors will risk. This, according to Mr. Yuichi Ezawa, group senior tected for a period of five years. adviser at J.P. Morgan in Tokyo It has also given a pledge that and a former official at the Minisnone of the top 20 banks will be try of Finance, will call for a very allowed to fail. That said, the substantial downward adjust- readiness of the business commu-

> The recognition that asset prices are out of line with incomes in what is now a mature economy also preoccupies top officials at the ministry. The growing enthusiasm of private Jananese capital for the higher bond vields available overseas should thus spread in due course to foreign equities.

As for the inflationary escape route, this would be profoundly destructive in a high-saving economy in which investors provide for retirement through fixed-interest bonds. Japan's social cohesion, already rocked by the depredations of the bubble economy, would be further undermined.

In short, there is no painless way over the current logjam. As so often in the past, a shock is required before policy can make the necessary adjustments.

One far from implausible sceof the New Frontier, the main opposition party and a former director of the Bank of Japan. He forsees real growth falling to zero in the first half of the fiscal year, while predicting growing concern over worsening credit ratings for accompanied by a widening of the so-called Japan premium, wholesale funds on Japanese

banks in international markets. If, in extremis, this triggered turmoil and Mr Hashimoto's government felt unable to address the resulting crisis with public money, the government might fall - paving the way for a new regime with a new blueprint for a reorganised financial system

It is, perhaps, too easy to be pessimistic about Japan. The visitor to Tokyo is struck by the nity and a growing number of bureaucrats to embrace radical measures. A combination of global market pressure and electoral reform is beginning to have a tangible effect.

Yet past expectations of the economy have been so high that the problems of a mature economy appear deeply unsettling. The sense of unease is compounded by the failures of the bureaucratic elite to rise to new challenges. It was much easier to provide successful guidance when the economy was catching up with the rest of the world. The real ground for worry is that Japan has shown a genius for deferring the inevitable. This year will probably see a crunch in the financial system. But how beneficial or otherwise the shock might prove is, as usual, impossible to say.

Keep on digging

Beleaguered officials at Bre-X Minerals, the Canadian exploration company which apparently overestimated its \$3.6bn estimate of gold reserves at the Busang site in Indonesia, may yet derive some comfort

from unlikely quarters. Bre-X, which needs a lot of comforting right now, may learn more about the gold deposits from the Filipino family of Mr Michael de Guzman, the company's chief geologist who died after falling from a helicopter en route to the Busang venture two weeks ago Questions have since been raised over whether or not the accident was a suicide.

After his burial in the Philippines on Friday, the family savs it will probably hold a press conference at which everything will be cleared up. Bre-X will be hoping that means a contradiction of the recent Canadian consulting firm Strathcona Mineral Services, which believes prospective gold reserves at Busang were exaggerated because of invalid

Mr Simplicio de Guzman brother of the late geologist offers the slender chance that there may yet be better news for Bre-X. "My brother is a very methodical person. He is very analytical; all these speculations of the gold not being there, it's unthinkable." Brotherly duty or insider knowledge? All should soon be revealed.

Flagging

■ Only 91 days to go and, slowly but surely, the itsy-bitsy final details surrounding the handover of Hong Kong to China are falling into place. All tickets for the free cruise on Britannia have been allocated, the bands and music selected and a playing order chosen - leaving little more than a diplomatic

brainteaser over flags.

Everyone, it seems, has for ages accepted that midnight on June 30 will see the flags of the United Kingdom and Hong Kong lowered, to make way for the flags of China and of the new Hong Kong Administrative Region. But choreographing all the flagpoling activity has apparently eaten up hours of precious time for the Sino-British joint liaison group which is handling details of the

transition. Britain, it seems, wanted the Hong Kong flag lowered first, followed by the Union flag underlining a dignified retreat from the colony" - with the new Hong Kong flag, bearing the

bauhinia flower, to be raised

ahead of the five-starred Chinese banner. The Chinese objected. then he can't help though no-one seems entirely sure why, so imaginary flags

were raised and lowered until everyone felt dizzy. Reports of an agreement over the weekend suggest that both British and old Hong Kong flags will now be brought down simultaneously before their replacements get to flutter in the balmy, Chinese air.

Batteries extra

■ This laternet ousiness is getting too big for its boots. An increasing number of companies seem to be hiding behind their web pages when asked the most straightforward questions. Take St Louis-based Ralston Purina, maker of Eveready batteries and Purina Chow animal foods: while it's among the world's biggest manufacturers of consumer batteries, Ralston isn't exactly keen on divulging details

of how it goes about its business. All requests for interviews are turned down and callers are. company's internet pages -which boast a wealth of "battery buzz", most of it clearly intended to appeal to 10-year-olds.

Frustrated searchers can at least find the telephone number of the company's top public relations man, one Keith Schopp; problem is, he'll only talk to you to explain that if it's

Cairo meeting attacks east Jerusalem settlement | HK tempts

Arab states put closer links with Israel on hold

By Mark Huband in Cairo and Avi Machis in Jerusalem

towards closer relations with Israel in protest at its building of a Jewish settlement in a disputed area of east Jerusalem. Arab League foreign ministo suspend moves to establish

ters agreed in Cairo last night diplomatic ties with Israel, to close Arab and Israeli missions, to restore an economic boycott and to withdraw from multilateral peace

Jordan, Egypt and the Palestinians will be exempt as they are bound by formal bilateral ements with Israel.

At least two Arab states appeared to have expressed concern over the wording of the agreement, but a consensus was reached that included Oman, Morocco and Tunisia the three states that have liaison offices, though not embassies, in Israel. The foreign ministers will now seek the approval of heads of state for the recommendation.

Mr Farouk Al-Shora, the Syr-

Arab countries had been forced to take such a decision" by the policies of Mr Benjamin Netanyahu, Israel's prime minister. "Arabs bave taken a wise decision in response to a clumsy and stu-

pid policy." Mr Netanyahu told Israel radio the Arab move amounted to an attempt to overthrow his Likud-led coalition. He said: "Certain elements in the Arab world have perhaps developed an illusion they can dictate to the people of Israel who their nent will be. The Arab world is testing us.

But it is completely clear that returning to the tactics of the economic boycott will not succeed. They did not succeed when Israel was small, economically and otherwise, and they will not succeed today when we are much stronger."

Israel's opposition Labour party and other left-wing factions unsuccessfully tabled two no-confidence motions against the Netanyahu government in protest at the recent deterioration of Israel's international status. Clashes between Palestinian

demonstrators and Israeli troops continued yesterday for the 12th day, leaving 460 Pales tinians injured, according to Palestinian radio. Violence has flared since

Israel decided to build the settlement ~ called Har Homa hy Jews and Jahal Abu Ghneim by Arabs - in Arab east Jerusalem, control over which was to have been decided at negotiations on the final status of the city. The latest victim of the violence was killed by Israeli forces at the weekend near the West Bank town of Ramallah.

At the weekend, the Israeli army stationed tanks at the entrance to some Palestiniancontrolled areas - a move described by Mr Yassir Arafat. president of the Palestinian Authority, as a "declaration of war against an unarmed

THE LEX COLUMN Steeled for change

They may have shirked a full merger, but at least Krupp and Thyssen appear to be pulling few punches in the planned combination of their steel operations. Eight thousand job losses by 2002, a third of the combined steel workforce. should help produce savings of DM550m. And the phased closure of all three blast furnaces at Krupp's loss-making Dortmund site will shave 4m tonnes off Europe's 70m tonnes of flat steel capacity - which should improve prices.

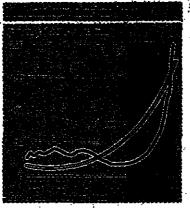

Nevertheless, both Krupp and Thyssen are left with question marks hanging over their other activities. Krupp, having admitted that it lacks critical mass in engineering, machinery and car parts, needs to make acquisitions. Parts of its portfolio would fit well with businesses inside Mannesmann or Preussag, though it may also want to look outside Germany. Thyssen's problem is the opposite. After 20 years of ill-advised diversification, this deal turns it back into one of Europe's biggest - and potentially, - steel makers. Its management should therefore accelerate its

much-mooted disposal programme. For Europe's steel industry, the German merger could be extremely positive if it serves as a catalyst for further rationalisation. France's Usinor Sacilor is keen to take over CSI of Spain and marginal producers such as Cockerill Sambre and Arbed also look vulnerable. But this is an industry which has lost virtually all the benefits of previous restructurings to customers, to the detriment of its shareholders. The Krupp/Thyssen deal on its own will not change this sorry state of

French share options

Mr Michel Bon's plan to issue share options to 1,000-1,500 France Telecom staff is unusual only in the sense that options will extend deeper into the business than is usual. But for top executives in French companies, share options are already pretty common - certainly more so than one might expect in a country which generally regards shareholders with noncha-

Why? The explanation has little to do with tax. High-earners in clearly unde treatment of share options has this reasoning misses one crucial vonchers.

recently been tightened, they remain a tax-favoured alternative for both executives and their

From the corporate governance if not the taxpayers' - point of view, this is no bad thing. Incentives matter, and if French executives can build largish fortunes through strong share price performance their shareholders are unlikely to complain. Still, there are snags. For one thing, shareholders are told very little about how many options are issued to individual executives, and the prices at which they can be exercised. This is important information which shareholders plainly have a right to know; it is, after all, their money. But there is a subtler problem too. However shareholder-minded their remuneration packages, to many French executives status matters still more than money.

UK takeovers

Would making hostile hids harder also make them fairer? The brouhaha over last year's takeover of Northern Electric has already shown that allowing advisers - on either side - to buy shares in the target company is a dubious practice. Now the Takeover Panel is widening its net to look at whether the predator itself should be restricted from buying shares. Under the current rules, a cash bidder can buy up to 30 per cent of its

target in the market. At first glance, making it more difficult for bids to succeed merely to do with high-minded notions of tilts the odds in favour of poorly shareholder value, and everything performing companies, which is irable. And if share-France face hefty marginal tax holders are willing to sell out exchange listing or pay dividend rates and social security levies on early to a bidder in return for cer- Any profits it makes will be dististi their pay. point, that of fairness. Typically, the only shareholders actually able to sell to the bidder in the course of a bid are the big institutions. Private shareholders almost invariably miss out on "dawn raids" and ten der offers.

a bonds

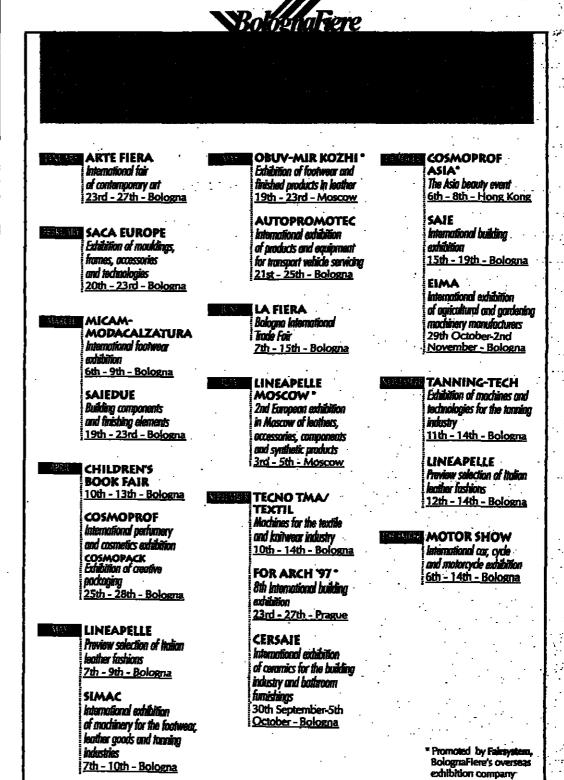

A more even-handed approac might be the one used in the US, where a bidder is barred from buying shares in its target once it has launched an offer. Nor can the target buy in its own shares, putting both on an equal footing. This has not noticeably stemmed the flow of bids and deals in the US. For the panel, adopting this approach might prove too radical. It may prefer to cut the ceiling on market purcha to, say, 15 per cent as a first stier But, as the recent crumbling of the UK's rights issue system show practices once thought to be writt in stone can change.

The millennium

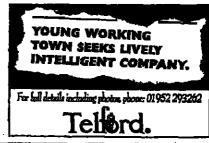

How should investors deal the millennium? According to the nsters, transport, commun tion and banking systems will ed lapse at midnight on December 31 1999 as computers around the work go on strike. The resulting turnot would, inevitably, spill over into financial markets. Far from being disaster, however, this could pro to be an opportunity; this week expected to see the launch of the first investment trust designed for exploit the potential.

Provisionally called The Luddiffe the trust intends to follow a thre pronged approach. The first will to back start-ups in industri which will benefit from poten millennium mayhem; stagectad builders, pigeon breeders and man ufacturers of piggy banks are obvi ous examples. Second, The Luddi will invest in companies who activities should be relative immune: small businesses in the mary industries such as agriculty and forestry spring to mind. This the investment trust will take about positions in stocks which can expected to fall if chaos strikes especially those firms that are dependent on big high-tech networks such as airlines, banks and

telephone operators. Finally, The Luddite will have to avoid getting caught up in technological maybem itself. So it is 160t planning to ek a formal st

Bid battle for Thomson-CSF

By David Owen in Paris

Alcatel Alsthom, the telecoms and engineering group, and Lagardère, the conglomerate, have formally declared their intention to bid for Thomson-CSF, the defence electronics group being privatised by

the French government. Confirmation that the two leading French companies will bid comes as some powerful voices in the government have dropped their opposition to the participation of non-French grows in any offer.

Prompted by fears that other European countries might leave France out of the current continent-wide defence sector restructuring if it were seen as too intransigent, these officials are now suggesting that for-eign participation in French-

Sir Richard Evans, British Aerospace chairman, spelt out his position in February, telling Le Monde newspaper the company was "continuing to support the candidacy of Lagardère" within the framework of Matra BAe Dynamics, the two companies' recently-formed missiles joint

Optus set to float after it buys out partners

By Nikki Talt in Sydney

Optus Communications, the Australian telecoms group, bas moved to settle the legal action which has held up its A\$4bn (\$3.1bn) stock market float by buying out its partners in the Optus Vision cable consortium. Optus Vision - one of two

consortia laying cable networks across Australia - is owned 46.5 per cent by Optus; 46.5 per cent by US West, the US telecoms company; 5 per cent by Mr Kerry Packer's listed Publishing & Broadcast ing group (with options to go higher); and 2 per cent by Seven Network, a local TV network run by Mr Kerry Stokes, the Perth-based entrepreneur.

Under the deal - struck in the early hours of Saturday after weeks of legal wrangling and negotiation - PBL, US West and Seven will swap their shares in Optus Vision for convertible notes in Optus Communications. The notes will convert into shares in the telecoms group when Optus' flotation goes ahead, probably later this year.

The catalyst was a court action brought by Seven alleging that the other Vision shareholders had breached a shareholders' agreement. This action will now be dropped. Optus said it expected that ownership could be transfered by the end of April.

Optus declined to comment on the terms of the convertible notes. However, Seven, in a separate announcement, said it would be able to acquire an initial 50m shares at A\$1.25 each, with an option over a further 50m. PBL, meanwhile, would be entitled to 30m shares, at A\$L50 each.

Optus Vision, which incurred losses of around A\$178m in the first half of 1996-97, is crucial to Optus' future: apart from pay-TV serto run a local telephony service over the cable network.

It claims to have 180,000 subscribers - slightly more than the rival Foxtel cable network. being laid by Mr Rupert Murdoch's News Corporation, and Telstra, the government-owned

telecoms group. An estimated A\$1.3bn -A\$1.4bn is thought to have been invested in Optus Vision.

Ascend hit by Cascade deal

By Nicholas Denton in San

nvestors wiped \$1.5bn resterday off the market value of Ascend Communications in the wake of the networking equipment manufacturer's 8.7bm acquisition of Cascade ommunications.

In the latest round of consolidation among networking hardware makers contending with the growing dominance of Cisco Systems, Ascend said on Sunday it was buying Cascade in a stock deal. Ascend was wised by Deutsche Morgan Grenfell.

Analysts accepted the logic of marrying Ascend's leadership in supplying remote access servers to Internet service providers with Cascade's strengths in modern technologies for switching telecommurications traffic such as ATM and frame relay. However, uncertain regulatory environshareholders thought Ascend ment, may be holding off on had paid too much.

Ascend and Cascade had combined revenues of only results led investors to focus \$890m in the last four quarters. but both companies are growing rapidly and their combined market capitalisation - \$8.50n at the end of last week - is second only to Cisco, which is worth \$33.7hm, in their sector .

Networking equipment manufacturers' shares command high earnings multiples because they provide the plumbing for the Internet and are seen by investors as more reliable than software companies as a way of tapping into

the internet's growth. But as the deal was unveiled Cascade signalled first-quarter revenues of about \$90m, conpared with Wall Street forecasts of about \$110m. Analysts and Cascade, which said telecome carriers, in an in Massachussets.

Cascade's disappointing on the 28 per cent premium Ascend is paying for control of its counterpart. "A lot of shareholders think that the Ascend management should have waited and picked up Cascade at a much lower price," said Mr Joe Noel, an analyst at Hambrecht & Quist to the deal and a broad market retreat, Ascend shares fell \$10.5 to \$41.5 in heavy trading yesterday morning. Cascade shares - for each of which Ascend is offering 0.7 of its own - fell \$7.25 to \$27.25.

Institutions also questioned the practicality of combining Ascend, based in California and Cascade, which has its HQ

BSkyB seeks £600m in digital venture

By Hugo Dixon

British Sky Broadcasting is seeking £600m-£700m (\$954m-\$1.11bn) to establish its planned digital television joint venture with British Telecommunications.

The investment - from BSkyB, BT and other partners - is larger than many observers had expected. The money would be used

by cutting the price of settop boxes needed to receive digital TV to £200-£300 from the retail cost of about £400.

The partners are establishing a new company, Interactive Services, to subsidise the boxes. BT wants to ensure they have a modem which can be plugged into a telephone line, enabling cus-

service providers and allowing interactive applications such as home banking and shopping.

BT also hopes to provide services such as video on But recently Interactive Serdemand and educational programmes over its telephone lines through the boxes. NEWS DIGEST

BA completes sale to Ryder

British Airways has completed the transfer of its ground fleet services division to Ryder System, the US-based vehicle services group. The disposal is part of BA's strategy of concentrating on core services and outsourcing other operations to save 11hn (\$1.59hn) over three years.

The division provides fleet management and mainte-nance services for BA and other airlines at Beathrow and Gatwick. BA said that it had awarded a five year contract to Ryder for its vehicle needs at the two UK airports.

BA said that 415 of the division's 486 staff will move to Ryder. The other 71 have either accepted offers of early retirement, voluntary severance or new jobs with BA.

BA has estimated the value of the assets being trans-

Country Casuals setback

Manufacturing losses severely dented operating profits at Country Casuals Holdings, the UK clothing group that may be taken private by its chief executive.

Lerose, the garment manufacturer, fell £1.12m into the red as sales almost halved to £3.58m. Losses at Elvi. which specialises in clothes for larger women, were cut from £2.1m to £1.59m as sales grew 19 per cent to £10.2m. These businesses were put up for sale last month and on Tuesday Mr Mark Bunce, group chief executive, said he might make an offer for the whole group.

At the pre-tax level, profits for the year to January 25 were £108,000, compared with £249,000 previously when £1.1m was spent defending the group from a 140p a share hostile bid led by former chief executive Mr John Shan-

William Cook declares victory

William Cook marked the final victory in its bitter take over battle when its shareholders voted to delist from the London Stock Exchange. Thursday's EGM vote ended 42 years as a publicly quoted company for the Sheffieldbased steel castings concern. The company said it had won acceptances representing 98 per cent of the shares for its management buy-out deal.

Pillar in £18m disposal

Pillar will today announce it has sold Mercury House, 100,000 sq ft development near Bracknell, Berkshire, for £18m. The sale, to the Teachers Insurance & Annuity Association, represents a profit of about £3m and a neinitial yield of about 8 per cent.

Michael Lindemann.

Property powers Swan Hill

Swan Hill, the restructured UK property group formerly known as Higgs & Hill, announced a 46 per cent rise t pre-tax profits to £3.4m from property, on sales 83 per cent ahead at £40.4m. Its housing arm increased sales 10 per cent to £42m last year but slipped from £585,000 profits to £291,000 losses as it developed low-margin land.

Partners seeks placing

Partners Holdings, the UK stationery retailer, is seeking a placing on the London Stock Exchange this month to help fund its expansion from 80 outlets to 220 by 2001. For the 40 weeks to January 4 the company made £1.68m pre-tax on sales of £23.9m. Peel Hunt is sponsor and broker.

MEPC and Hammerson end talks

Talks about a possible merger between MEPC and Hammerson, two of the largest UK property companies. had ended, MEPC said yes-

But the company, the UK's third largest property group with a market value of £2bu (\$3.2bn), did not rule out the possibility of future talks with Hammerson. However, MEPC said that no serious offer had been made and none could "realistically" be expected in the near future.

The negotiations started earlier this year when Hammerson, the UK's fifth largapproached MEPC with a merger plan involving disosals of MEPC assets. have had the support of a Analysts pointed out that minority of MEPC sharehold-

a merger would help Hammerson reduce its debt ratios, which are significantly higher than MEPC's. But from MEPC's standpoint, the benefits were less obvious. "It [a merger] would be like using its capital to finance Hammerson's projects," said one observer.

MEPC has recently disposed of some of its European assets and cut down on expenditure. In contrast, one source familiar with Hammerson has been expanding aggressively with a £825m development programme including the Bull Ring project in Birmingham. This has raised its debt levels to about 1.5 times its capital and led it to consider a est property company with a rights issue. MEPC's debt market value of £1.25bn, amounts to slightly less than its capital.

The merger is believed to

Head to head: Ronald Spinney (left) and James Tuckey, chiefs of 'aggressive' Hammerson and 'conservative' MEPC, call off merger plans as observers talk of culture clash

Fortis surpasses forecast: profit up 16%

Fortis had an exceptionally good 1996. Net profit was up 16% to ECU 731 million, whilst the operating result was up 9% to ECU 1.194 million. These excellent results were achieved in spite of substantial provisions being formed in order to cover all charges connected with the euro and the year 2000 (ECU 158 million before taxation; net amount ECU 86 million). All activities contributed to this successful development of the result. The balance sheet of MeesPierson was consolidated in the Fortis figures at yearend 1996; the results will be incorporated in the Fortis figures from 1 January 1997.

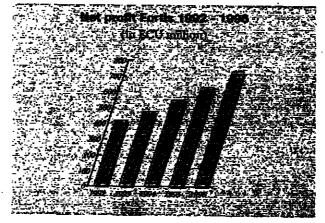

Both parent companies, Fortis AG and Fortis AMEV, are once again proposing a clear increase in the dividend per share for 1996. On the basis of these good results, the Fortis AG Board of Directors will propose to the General Meeting of Shareholders of 28 May 1997 that it should declare a gross dividend of BEF 127 per share. The Executive Board of Fortis AMEV will propose to the General Meeting of Shareholders on 28 May 1997 a total dividend of NLG 1.90 per share. As an interim dividend of NLG 0.68 was already distributed in October 1996, the final dividend will be NLG 1.22 per share.

Prospects

The organic development of the Fortis companies, and the immediate positive contribution of MeesPierson to the profit of Fortis are expected to produce ongoing profit growth in 1997, barring unforeseen circumstances. On the basis of this forecast from Fortis, in 1997 both parent companies again expect an increase of earnings per share.

The Annual review 1996 of Fortis and its two parent companies will be published on 29 April 1997. A copy of the Annual review is available on your request at Group Communication of Fortis.

MAS in move to expand fleet

By James Kynge in Kuala Lumpur

Malaysian Airline System, the national carrier, has announced plans to raise M\$3.27bn (US\$1.32bn) to expand its fleet and help build Malaysia's new international airport.

The move, approved by the board of directors over the weekend, would rank as the company's largest capi-tal raising exercise yet. The funds are to be raised through a rights issue and a hand issue.

Just over M\$2bn would go towards huying 25 wide-bodied aircraft from Boeing, the US sircraft maker, worth an estimated M\$10bn. The aircraft, 15 Boeing 777 200Xs and 10 of the company's 747s, are scheduled to be delivered from next month until 2001.

The remaining portion will be used to build Malaysian Airline's facilities for cargo, catering and engineering at the Kuala Lumpur International Airport, which is scheduled to start operating in January 1998. Stock market analysts were optimistic about the financing plans, pushing up Malaysian Airline's share

price 20 cents to M\$6.60 yesterday, in spite of a retreating wider market. The exercise will triple the number of outstanding shares to 2.31bn. The airline plans a one-for-one rights issue of 770m new shares at M\$2.3 a share. It also proposed a one-for-one bonus issue of 770m ordinary shares with a par value of M\$1 each. It will issue unse-

value of M\$1.5bn, and 770m detachable warrants. Mr Tajudin Ramli, the airline's chairman, said the

cured bonds with a nominal

company's debt/equity ratio will be reduced some time in 1998 after the capital raising is completed. The high proportion of debt to equity has been perceived as the company's biggest problem, and

INTERNATIONAL NEWS DIGEST

ITT sells stake in **Alcatel Alsthom**

ITT, the US hotel and casino company facing a \$6.5bn hostile bid from the rival Hilton Hotels group, yesterday said it had sold the rest of its stake in Alcatel Alsthom, the French telecommunications, transport and power engineering group, for \$530m. The sale consisted of 4.5m shares, or 2.8 per cent of Alcatel Alsthom's capital, and was made to a US institutional investor with Alcatel Alsthom's approval.

The stake, which FTT said was sold at a premium of more than 25 per cent to book value, was a legacy of the days when ITT was a telecommunications company. The sums realised since ITT began selling non-core assets to thwart the Hilton Hotels bid now total \$1.48hn.

Banco di Napoli cuts loss

Banco di Napoli, which in the process of being privatised, has reduced its loss to LI,651bn (\$985m) in 1996, from L3,156bn the previous year. The deficit was in line with estimates when the treasury in December accepted a L61bn bid for 60 per cent of its shares from Banco Nazionale di Lavoro (BNL) and Ina, the insurance group,

Accumulated losses over the past three years amount to L5,945bn. When added to over L10,000bn in bad and doubtful loans, moved to a special holding as part of a pre-privatisation clean up of the balance sheet, Banco di Napoli represents by far the biggest loss in recent Italian banking history.

Seita ahead 15%

Seita, the French tobacco group best known for its Gauloises and Gitanes cigarettes, has posted a 15 per cent advance in annual profits, helped by cost cutting and higher international sales. The company reported a net attributable profit for 1996 of FF1786m (\$141m) on turnover of FFr17.4bn, up from FFr684m on turnover of FFr16.4bm the previous year. Operating profit rose more than 26 per cent from FFr984m to FFr1.24bn. The group is proposing a net dividend of FFr6.60 a share, against

Philips to sell UPC stake

Philips, the Dutch electronics group, is to raise some FI 800m (\$424.44m) through the sale of its half share in UPC, Europe's largest private cable operator, to its joint venture partner, the Colorado-based United International Holdings. UPC is active in 14 European countries and Israel. Diluted for outside interests in its various services it has 1.3m subscribers.

Of the proceeds, FI 308m is in the form of new shares in UPC which Philips will be able to sell after the deal is finalised, in the third quarter of the year. The group is shedding peripheral holdings in an attempt to reverse a

Credito Italiano advances

Credito Italiano, the privatised Milan-based bank, has reported a 43.5 per cent rise in 1996 net profits after minorities to L282bn from L196bn in 1995, and a 10.6 per cent rise in gross operating income to L2,280bn from 1.2,044m. Although net interest slipped by 5.1 per cent to 1.4,291hn, other operating profits advanced by 26.5 per cent to L2.095hn. Strict control over costs drove down by 0.2 per cent. Total per cent to more than L175.000bn. Paul Betts, Milan

- 17. Election of members of the Nomination Committee
- 18. The Board of Directors' proposal to invite shareholders to redeem their shares in AB Volvo and the Board of Directors' proposal that the Annual General Meeting authorizes the Board of Directors to make a decision regarding a new share issue

Point 9. The Board of Directors proposes that the dividend shall be paid in cash in the amount of SEK 4.30 per share.

Annual General Meeting of AB Volvo (publ)

Shareholders in AB Volvo are summoned herewith to the Annual General Meeting in Göteborg, Lisebergshallen, entrance from Örgrytevägen, Wednesday, April 23, 1997, at 2:00 p.m.

April 28, 1997 is proposed as the record date to receive the cash dividend. Payment of the cash dividend is expected to occur through VPC (Swedish Register Securities Center) on May 6, 1997.

Point 11. The Nomination Committee elected at the 1996 Annual General Meeting proposes the following under the points above. 7 members and no deputy members.

Point 12. The Nomination Committee proposes two auditors and two deputy auditors.

Point 13. The Nomination Committee proposes a fixed fee of SEK 2,260,000 to be distributed among the members in accordance with the decision of the Board.

Point 14. The Nomination Committee proposes fees based on invoices for the examination of the accounts, management and audit of the consolidated financial statements.

Point 15. The Nomination Committee proposes re-election of Per-Olof Eriksson, Håkan Frisinger, Scren Gyll, Tom Hedelius, Scren Mannheimer and Björn Svedberg and new-election of Leif

Point 16. The Nomination Committee proposes reelection of authorized Public Accountants Ragne Billing and Nils Brehmer as auditors, with authorized Public Accountants Anders Ivdal and Olle Gunnarsson as deputy auditors.

The Nommation Committee's proposals, as presented in the items above, have the support of shareholders representing more than half of the votes and more than one third of the share capital

Point 18. The Board of Directors proposes that the Meeting approve that shareholders in the Company be offered an opportunity to redeem AB Volvo shares at a rate of one share per 20 shares held. In

brief, the implications of the proposal are as follows.

The redemption amount will be computed on the basis of a certain average price paid for Volvo series B shares on the Stockholm Stock Exchange plus SEK 40. For each share held on the redemption date, shareholders will receive one redemption right. During the specified redemption period, each multiple of 20 redemption rights will carry entitlement to one series A or B share in the Company. The offer will include arrangements for a simplified procedure for smaller holdings of redemption rights.

In view of the redemption offer, the Board also proposes that the Meeting authorize the Board to decide on a new issue of shares at market terms, waiving the shareholders' preemptive rights, from which the issue proceeds will amount to not more than SEK 116,000,000.

Completion of the redemption offer is conditional upon and assumes the following: that a special meeting of shareholders, which is intended to be held on July 2, 1997, approve a motion that the share capital be reduced as a result of the redemption offer that the Board exercises its authorization according to the above, whereby the Company receives issue proceeds of at least the amount corresponding to the reduction in share capital; and that the special meeting approve a bonus issue of shares, whereby the par value of Volvo shares is raised from SEK 5 to SEK 6 and the resulting change in the Articles

The Board's complete proposal will be available at AB Volvo's Head Office as of April 16,

Right to participate in the Meeting

Participation in Volvo's Annual General Meeting is:limited to shareholders who are recorded in the share register on April 11, 1997 and who advise Volvo not later than 12:00 noon (Swedish local time) on April 18, 1997 of their intention to participate.

Share registration

Volvo's share register is maintained by Vardepapperscentralen VPC AB (Swedish Securities Register Center). Only owner-registered shares are listed in the names of the shareholders in the share register. To be entitled to participate in the Annual General Meeting, owners of shares registered in the name of a trustee must have the

shares registered in their own names. Shareholders who have trustee-registered shares should request the bank or broker holding the shares to request owner-registration, so-called voting-right registration, several banking days prior to April 11, 1997. Trustees normally charge a fee for this.

Notice to Volvo

Notice of intention to participate in the Meeting may be given

- by telephone to +46 31 59 00 00
- or in writing to: AB Volvo (publ) Legal Department S-405 08 Göteborg, Sweden

In providing such notice, the shareholder

- should state
- personal registration number (where applicable) address and telephone number

Shareholders who desire to participate in the Meeting, must submit notice prior to expiration of the notice period, not later than Friday, April 18, 1997, 12:00 noon (Swedish local time).

Annual General Meeting ("AGM") on Tuesday, April 29, 1997 at 3:00 p.m.

The venue of the AGM shall be at 34 Steffinia út, H-1143 Budapest (HM Művelődési Ház). Agenda of the AGM

1. Report of the Board of Directors on the 1996 but

- ation of the am
- ution on the determination and allocation of the 1996 after tax profit of the may declaration of dividend for the 1996 business year on the preference and
- Approval of the 1996 Annual Report of the Company, including the 1996 Ba

- quest. part on the first quarter of 1997.
- Attendingents to the Company's Southers.

 Approval of the consolidated text of the Company's Statutes (including on of the manuface of members of the Supervisory Board, election of a new
- memory. Resolution on the remuneration of the members of the Supervisory Board. Resolution on the remuneration of the members of the Board of Directors
- Exension of the mandate of the Company's statutory auditor.
 Resolution on the remaineration of the Company's statutory auditor.

Every registered common share with a nominal value of 1,000 rate (one moustain-lungurian Forints) shall entitle its holder to one vote as the AGM. Shareholders may exactise their rights at the AGM either in person or through an authorized representative with a voting eard or other certificate issued by the Board of Directors entiting its holder to exercise voting rights (collectively: the "Voting Card"). In accordance with Section 271 of the Companies Act, the proxy empowering its holder to representation shall be incorporated into a public legal document or a fully evidenced private deed (as described in Section 196 of the Civil Code) and shall be submitted prior outhering the certificate position in holder to the receipt of the Votine Card. Holders

Participation and voting at the ACM shall, be subject to the shareholders presenting their shares, or in the case of deposited registered shares, a certificate of deposit, and a proxy is the case of an authorized representative, to the Company's Financial Strategic Department (H-1103 Budapest, Gydum'6i ot 12.) on April 28, 1997, between 8:00 a.m. and 4:00 p.m.

On the basis of the share (or certificate of deposit), and in the case of an authorized representative, the authorization, the Board of Directors shall issue a Voting Card. Shareholders' rights at the AGM shall be exercised by using the Voting Card. The Voting Cord shall contain the name and the number of votes of the shareholder.

voung Cort shall contain the name and the number of votes of the abareholder. In the case of registered theres, the Company shall only issue a Voting Card to a shareholder who is registered by the Board of Directors in the Share Register as the owner of the abases. The Company hereby requests those shareholders whose shares are deposited with Közpouri Elszánnolóház és Eraktár Rt. ("KELER Rt.") to initiate, either personally or through as authorized broker, their entry inso the Company's Share Register pursuant to the Company's Santues, on the basis of a certificate of deposit issued by KELER Rt. prior to the AGM. Due to the procedure for the preparation of the AGM, entries into the Company's Share Register shall be suspended from April 25, 1997, tatel the close of the AGM.

The Company shall, for such period as set forth in the certificate, also effect registration in the Share Register for registered blank endorsed shares, provided that the registration applicant certifies his ownership over the blank endorsed shares either (i) by producing a deposit certificate issued by KELER RL. or (ii) aduly signed deposit certificate issued by a bank or a stockbroker registered in Hungary, on the basis of a KELER RL.

in the case of entries in the Share Register with respect to blank endorsed regist shares handled as a consolidated deposit, the owness of such shares shall be respon for having their abareholding registered in the Share Register from time to time.

for having their shareholding registered in the Share Register from time to time. In order to participate and vote at the AGM, GIC shareholders should connect the Austrian Central Depositinay (Ostermichische KontrollBank, Am Hof 4, A-1010 Vlenna) no later than April 24, 1997, during official business hours, to request the issuance to them of a voting proxy. The GDR shareholders shall be entitled to instruct the Bank of New York, as Depositinary, to exercise their voting rights, if any, pertaining to the amount of Shares represented by their respective GDRs. GDR shareholders, therefore, should contact the Bank of New York, (101 Barclay Street, New York, N.Y. 10286). The GIC and GDR shareholders must prove their ownership interest in the GIC or the GDR respectively. The Austrian Central Depositary will not issue voting proxies after April 24, 1997. GIC and GDR shareholders respectively may not transfer their interest in the GIC or the GDR thereholders the provide a blocking confirmation to this effect issued by their custodian bank.

effect issued by their custodian bank.

The Company requests the holders of preference shares to indicate their intention attend the AGM by April 25, 1997, at the Company's Financial Strategic Department writing, Entry permits to stread the AGM shall be provided to the holders of preferer shares on the spot from 12:00 p.m. on the date of the AGM upon confirmation of the respective shareholding as emerced in the Company's Share Register.

The assumal report shall be available for review from April 4, 1997, and draft propos for the AGM shall be available for review at the Company's Financial Strate, Department on business days from April 14, 1997, between 8:00 a.m. and 4:00 p.m.

In lack of a quorum, the date of the postponed AGM, with the same agenda, shall be held at the same location on April 29, 1997 at 4:00 p.m.

The Board of Directors proposes the descrutantion and distribution of a dividend from the 1996 annual profit on preference shares equal to 12% of their nominal value and 16% on common shares with the remainder of the after-tax profit allocated to profit reserves. The AGM shall approve the Company's studied balance sheet and determine the dividends to be distributed.

COMPANIES AND FINANCE

Charges hit Finmeccanica

By Robert Graham in Rome

Finmeccanica, the defence, energy and high technology group controlled by the Italian state, has announced 1996 losses of L540bn (\$322m) after a move to clean up its balance sheet before privatisation.

The losses follow a decision to bring forward charges of L575bn on its stake. defence and aerospace business. Without this, there would have been a modest L35bn profit against L40bn in 1995, after normal amortisation charges of L700bn. The charges were expected to be spread over three to

joint ventures in defence. It is also negotiating to take a ernment to transfer to it its stake in Airbus, the European aircraft alliance being turned into a corporation. Finmeccanica's move poses a delicate issue of

recapitalisation for IRI, the

state holding company which has a 62 per cent The company ended 1996 with net debt greater than net assets. Debts were up at L5,138bn from L4,878bn against net assets which

dropped from L5,061bn to IRI would find it hard to

Finmeccanica is in talks tion. This has encouraged with GEC-Marconi to set up Finmeccanica to explore the idea of persuading the gov-35 per cent state holding in SGS-Thomson, the valuable Franco-Italian microelectronics group.

France and Italy jointly hold 69.4 per cent of SGS-Thomson shares, with 30.6 per cent on the international market. The Italian stake is held by Mei, a state-owned company of which IRI owns 49 per cent. Based on stock market share capitalisation. the Italian share of SGS-Thomson is worth about L5.500bn.

provide a direct capital injec- believe acquiring this stake total orders at L28,226bn.

assets but would provide important synergy. Finmeccanica already controls the Italian side of the management of SGS-Thomson.

The treasury, which will have the final say, has yet to be convinced this is the best solution. It may still insist Finmeccanica should dip into its reserves and acceler ate asset sales, which totalled L1,200bn last year. This approach would break up the Finmeccanica group, which it has so far successfully resisted.

Sales were L13,883bn, up from L12,884bn. New orders Finmeccanica's managers amounted to L14.208bn with

Crédit Foncier de France.

the troubled mortgage lender taken over by the French state last year, needs to find an outside investor willing to inject FFr2bn-FFr2.5bn (\$354m-\$443m) in order to survive.

Mr Jérôme Meyssonnier said that Deutsche Morgan Grenfell, the investment bank, had been appointed to help find a partner to take a stake in Crédit Foncier and develop business projects with it to ensure its future. The hunt for a new share-

holder has become imperative since Crédit Immobilier de France, a rival French mutual mortgage lending company, last month withdrew its offer to take over some of Crédit Foncier's loan portfolio and staff. The search will not prove

easy, given that Crédit Foncier hunted in vain to find a partner last year. The government was

INTERNATIONAL NEWS DIGEST ::-

Cir back in profit after Valeo sale

Cir. the industrial holding controlled by Italy's De Benedetti family, marked a sharp swing to a Lazoba (\$191m) net profit in 1996 from the previous year's L288bn loss. The improvement was also reflected in Cofide, the family-controlled financial holding, whose profit stood at L17.6bn against a 1995 loss of L377bn.

The results were in line with analysts expectations. The turnround followed the sale last year of a stake in Valco, the French-based car components group, releasing L1,200bn. This enabled the debt structure to be eased, with Cir's net financial position moving from a negative L1,601bn to a L492bn surplus; and that of Cofide from a negative L1,598bn to a LA71bn surplus. Cir's turnover was

up 4.3 per cent to 1.2,795hn from 1.3,639hn.

The improved financial position also offset the impact of losses from Olivetti, the information technology and telephony group formerly headed by Mr Carlo De Benedetti. The Olivetti stake involved a further write-down of L280hn. During the year Cir's holding in Olivetti fell to 8 per cent from 15 per cent and is expected to drop further to around 5 per cent. Robert Graham, Rome

France to cut Bull stake

The French state is to sell a further 19m shares in Groupe Bull, the French computer company, cutting its stake to a level similar to the 17 per cent holdings owned by the group's three large industrial shareholders: France elecom, Japan's NEC and US-based Motorola.

Based on the current share price, it would raise about FFribn. The move will result in a substantial increase in the proportion of the company's shares that are publicly traded from just 3.4 per cent at present. The group last month reported its second consecutive annual profit, after accumulated losses of FFr22bn (\$3.9bn) between 1989 and David Owen, Paris

Koor plans Yankee bond

Koor Industries, Israel's biggest industrial conglomerate, plans a \$200m Yankee bond offering this year. It will use the proceeds to expand its operations as part of a strategic plan to raise revenues to \$5bn by the end of the decade.

Last week Koor reported net income up 8 per cent to \$180.8m in 1996, on a 2 per cent increase in revenues from \$3.47bn to \$3.53bn. Earnings per American Depositary Share remained unchanged at \$2.39. Analysts said Koor's telecommunications and agrochemicals arms had performed well but its building materials operations Avi Machlis, Jerusalei

Bank Leumi earnings up 24%

Bank Leumi, Israel's second largest bank, lifted net profits by 24 per cent in 1996 as a result of restructuring. Net profits rose from Shk453.5m in 1995 to Shk564m (\$168m), in spite of a one-off expense of Shk187m for a voluntary retirement programme, which helped the bank reduce its workforce by 3 per cent. Without the expense, net income jumped 47 per cent to Shk667m. Provisions for doubtful debts dropped sharply, by 36 per cent from Shk959m to Shk611m. The State of Israel holds an 82 per cent stake in the bank, and plans to offer 10 per cent on the Tel Aviv Stock Exchange this quarter. Avi Machlis

Bata India in the black

Further restructuring at Bata India, the country's largest manufacturer of shoes, has helped it climb back into the black. The company; 51 per cent owned by Bata Shoe (\$1.16m) in 1996 compared with a loss of Rs421.6m the previous year. Sales were up 11 per cent to Rs5.9bn, but expenditures, at Rs5.59bn, were held at the previous

A range of measures aimed at reducing costs and mproving productivity at its six factories produced strong dividends. According to the company, a shift in its marketing focus from high value shoes to medium and low-priced products, and the introduction of several "new products at popular prices" enabled it to win back a large number of its old customers. The quarter of a percentage point rise in the cen-trally targeted federal funds cent below German rates, rate, to 5.5 per cent, signals an end to a 20-month period of monetary easing in which short rates have fallen by three quarters of a percent-

The reaction in international bond markets so far has been relatively mild, taken advantage of low underlining the fact that the

already at a much higher derivatives to obtain even funds of so-called "market level than in February 1994. more leverage and the neutral" or "non-directional" As a result there is simply unwinding of these positions strategies, where managers less scope for monetary policy to be tightened.

In addition, yields at the last week's long-expected short end of the US debt bond market sell-off and increase in the Fed funds market are more attractive derivatives disasters of 1994 internationally than they and 1995 investors have gen- markets. were in 1994. In January 1994, three-month money Although some hedge funds market rates were 2.9 per and other speculators have cent below German rates, borrowed in short term while they are now about 2.7 money markets to invest in mated \$120bn currently comper cent above German higher-yielding paper of a mitted in hedge funds, but it

> less leverage in the markets today than there was three years ago. During 1998 and 1994 many investors had short-term rates in the US to

first nine months of 1996 up

in addition, there is also

during 1994 increased the scale of the sell-off. By contrast, since the

erally been more cautious. made in Tokyo, where there appears to be no immediate danger of an increase in

rates. Recent research by Tass Management, a London-

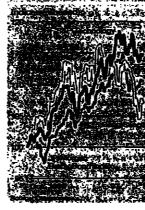

strategies, where managers take advantage of shifts in the relative values of different assets or instruments rather than taking bets on strong one-way moves in

gies still amounts to less than 10 per cent of the estilonger maturity, many of has grown by about 69 per these borrowings have been cent since January 1996 to approximately \$9.75bn. Moreover, markets already appear to have adjusted

few months. In the bond markets, many have already

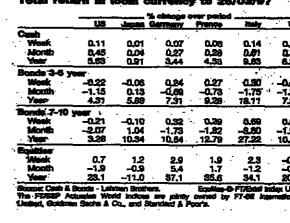

begun to sell longer-dated bonds and buy shorter-dated paper which responds in less volatile fashion to interest rate shifts. The yield on the 30-year Treasury bonds rose from about 6.5 per cent to 7.1 per cent early yesterday, while over the past month yields on German 10-year bonds, the benchmark for European markets, have The amount of money risen by nearly half a committed to these stratepercentage point

More specialised markets which presented investors with some of their best returns in 1996 have also eased in recent weeks (see graph). Mr Ali Naqvi, a fund manager with Citibank Global Asset Management in New York, points to five their expectations in the last such "feelgood" markets: Latin American Brady bonds and other emerging market

bonds: US speculative grade corporate or "junk" bonds; Italian government bonds; Hong Kong stocks; and shares in US technology companies.

But if a repeat of 1994 is unlikely, bond prices at least could still have some way to fall. In research published this week, Mr Neil MacKinnon and Mr Michael Burke, economists at Citibank in London, argue that real US

interest rates may be higher responded poorly to such than they were three years ago but at a level of 2.5 per cent they are fractionally lower than the average level of 2.6 per cent during the period since 1985.

Last week's rate increase is therefore unlikely to be a "one-off event", indicating that a phase or cycle of resumed interest rate tightening has begun. Historically US Treasuries have

"resumed tightening cycles". The most recent of these lowed a "mini-easing cycle" such as the one we have just witnessed - began in September 1958, November 1967, December 1968 and Septem ber 1980 and was followed by an average increase in 10 year Treasury yields of 117 basis points over the course of the subsequent year.

ING results may reach FI 3.24bn for year

ING Group, the Dutch Lille, IRIS analyst, is looking banking group, is expected F13.24bn (\$6.36bn), up from F12.649bn, according to analysts' forecasts.

CIC GROUP CONSOLIDATED RESULTS

COMMERCIAL DYNAMISM CONFIRMED

• Total loans outstanding up 5.1% thanks to increased consumer lending (8.2%) and home lending (7.4%), and a 5% rise in lending to self-employed professionals and businesses.

• Increased deposits (+5%) as a result of a steep (22.7%) rise in special term savings accounts.

Increased commissions and fee income (9.8%), notably as a result
of a 12.5% rise in commissions on financial transactions.

- STEADY, SIGNIFICANT EARNINGS GROWTH
- Net banking income up 5.4% at FRF 17.4 billion. • A tight grip on operating costs, up 1.7% at FRF 15.1 billion. Significantly increased gross operating income at FRF 4 billion

• Coverage of doubtful loans improved yet again, to 62.7%.

• Net appropriations of FRF 401 million raise the reserve for general banking risks to FRF 1.7 billion.

 Ordinary income before tax and the reserve for general banking risks rose sharply (54.9%), to FRF 1,775 million. • Group net income (excluding minority shareholders) rose 55.6% to

Development of consolidated group net income (excluding minority interests)

in FRF million

OUTLOOK CONSISTENT WITH MEDIUM-TERM PLAN

FRF 847 million.

The CIC Group continued to boost its competitiveness and profitability in 1996. It gained market share for the sixth consecutive year, thanks to its network's strong regional roots. At the same time, it continued to modernize its branch network, focusing on improving its products and services mix, upgrading its logistics, and economic equity allocation

This year should see a further significant rise in earnings. Also, the CIC Group expects to return to the private sector, which should represent an opportunity to broaden still further its already-sound financial base, and to build an ambitious development program for the Group, with new shareholders, while respecting the cohesion and identity of its network of regional banks.

FINANCIAL TIMES Financial Publishing

NEW YORK By Richard Tomkins

the Easter break yesterday with a bad case of the litters, and the nervousness looked set to persist for the rest of the week amid uncertainties over the outlook for interest rates and the quarterly earnings season about to

open. Last week's 0.25 per cent increase in interest rates the first in two years initially left investors divided between those who thought the rise would be enough to stifle the threat of inflation and those who thought it would be the first in a series. Subsequent economic data brought a swing in sentiment toward the latter view, leading to a tumble in shares and a fall in bond prices that pushed the yield on the long bond above the 7 per cent level.

Attention will now be focused on business activity in March in the hope of picking up clues to the timing of the next interes rate increase. In that context, the two most important reports this week will be today's publication of the National Association of Purchasing Management's index for March, with analysts expecting an increase from the previous month's 53.1 to 53.6, and Friday's employment report for March, which is expected

to show payrolls surged by another 193,000 workers. In the case of stocks, the other main influence on prices will be the outlook for earnings, with most US companies about to report for the quarter to end-March So far, profit warnings have been few, but it is usual for the markets to become edgy in the run-up to the reports and higher interest rates, with their implied threat to corporate profitability, have only increased the sense of

LONDON By Steve Thomason ... Any hopes that London's equity market might build further on last week's strong recovery, which saw the FTSE 100 recoup 98 points in three sessions, were given a severe jolt late on Friday

when Wall Street went into

a tail-spin.

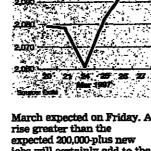

The Dow Jones Industrial Average was down 217 points before stabilising and closing with a 140 point loss. The wholesale retreat by US stocks was triggered by a big sell-off in US Treasuries. where the yield on the 30-year bond moved firmly back above the 7 per cent mark amid continuing concern that the Federal Reserve's move to hoist US

interest rates might be the

first of a series. With London's eilts and equity markets closed on fonday and Wall Street open for business as usual, City traders will be looking anxiously at their television screens for signs of another sell-off. Some strategists forecast a retreat towards 4,000 on the FTSE 100 in the short term, with turbulence increased by the looming

general election. This week brings a long list of economic pointers from both sides of the Atlantic. The key data as far as global markets are concerned come with the US non-farm payroli report for

6.20

jobs will certainly add to the vorries of those fearing more US rate rises. Tuesday brings the UK Purchasing Managers' Index for March, expected to show strong domestic demand.

Newcastle United, the soccer club. makes its long-awaited market debut on Wednesday with the shares, floated at 135p apiece, expected to get off to a roaring start.

The German stock market was unfazed by last week's quick agreement between Krupp Hoesch and Thyssen to merge their steel interests. Excitement at the thought of hostile takeovers gaining ground in Germany was replaced by the realisation that this could

still take time. abandoned its plans for a full-scale takeover of its bigger steel and engineering rival, there was plenty of excitement in other areas. Bank shares rose as talk of possible restructuring within the sector resumed, although on the basis of little evidence. Motor vehicle shares were also firm after strong figures from BMW and a better than expected recovery by Daimler-Benz.

However, the market suffered a bout of pre-Easter nerves on Thursday. Although the DAX blue chip index again rose above the 3,400 level, it dipped late in the day as Wall Street reacted unfavourably to strong economic data after Tuesday's rise in interest rates by the Federal Reserve

German stocks are likely to be buffeted if Wall Street anxieties persist, with Commerzbank warning of rising volatility. While the economic pick-up and better corporate earnings would

help the market, the bank saw pressures from foreign exchange and interest rate

At this stage, however, economists generally expect the Bundesbank to keep interest rates on hold. Only a further weakening of the D-Mark might prompt it to tighten later. This week's production and new order figures for February could show signs of accelerating economic recovery but inflation remains low and wage trends are moderate.

Markets will be volatile this week with much to digest, beginning yesterday with the end of the business year and corporate book-closings ors who bought stocks to take dividends before the year-end are likely to sell some excess holdings, while those who sold to shore up profits for book-closing may

resume buying. Yesterday evening, the government announced easures to revive the property market. Provisions enabling banks and financial institutions to securitise real estate collateral could help clear the mountain of bad loans burdening the finance industry. But the

announcement is unlikely to have a significant impact on the markets, as investors have been hearing reports about the likely contents of the plan since mid-March. Financial, real estate and construction stocks-

Bank of Japan's quarterly "tankan" survey of business sentiment is expected to show a modest improvement in economic conditions.

Projections for sales, profits and capital investment will probably show slight improvements spending plans for the new likely be weak. Economists do not expect the results to lead the Bank of Japan to change its easy monetary policy for the time being.

Nigerian protests boost oil

nervousness.

COMMODITIES By Susanna Voyle

Oil traders will be watching to see whether the latest round of unrest in Nigeria's Rivers State shows any sign of spreading further this

The closure of a number of processing stations operated by the Nigerian subsidiary of Royal Dutch/Shell last week reduced the country's output by 210,000 barrels a day, or about 10 per cent.

A continuation of the production shutdown over the holiday weekend would probably result in exports from the Bonny terminal being cut back.

A Senior official at Nigeria National Petroleum said that Shell could declare force maj-

31 of its local staff and contractors, held by feuding communities in Nigeria, had been freed.

The company said that 96 held at Shell's six flow stations occupied since last weekend by villagers protesting over relocation of their local government head-

The dispute has also hit Chevron, the US company. World oil prices were at first unmoved by the news.

However, in late trading on London's International Petroleum Exchange on Thursday - the last day of

On Tuesday Shell said that of the Nigerian situation buoyed prices.

Traders said the fears of political unrest helped the IPE Brent contract for May – the international benchmark staff and contractors, all for crude oil prices - to Nigerlans, were still being resist earlier pressure downwards from the New York Mercantile Exchange. It settled at \$19.38 a barrel on Thursday, nine cents firmer on the day, but seven cents

off the high. Another reason behind Thursday's mini rally was a surge of people closing out their "short" positions speculative bets that the market would fall - before the four-day Easter weekend holiday. "A lot of people trading before the Easter didn't want to go home

OTHER MARKETS Contolled by Williams **PARIS**

After some big name results last week, a long list of French companies will open the second quarter of 1997 in meetings with investment

analysts. Saint Gobain, the building materials and packaging group, kicks off today and, says Ms Anita Hibbert, an analyst at Dillon Read, it is likely to face questions on prospects after Pilkington, the UK glassmaker, said last Tuesday that profits this year would be below market expectations because of falling glass prices and overcapacity, particularly in Ger-

Saint Gobain, however, is unlikely to foresee more than a 10 per cent fall in prices on what is a decreasing proportion of group that all other division of the

group are going well. The Seita group, the manufacturer of Gauloise and Gitane cigarettes, hit trouble recently when the Liggett Group of the US admitted that smoking was addictive.

Seita has also had to cope with the Rothmans introduction of the Winfield brand

and an ensuing price war. The French company has plenty of assets, and liquidity; one question for it to answer on Wednesday is how it will use these to the benefit of shareholders.

Europe core has month of poor returns

With the exceptions of Spain and Portugal, all European government bond markets showed negative returns last month according to Salomon Brothers, the US investment

Core European markets. including Germany and France, were driven lower mainly by the weaker US Treasury market in the lead up to the Federal Reserve's 25 basis point interest rate rise last Wednesday.

The core European countries followed Treasuries and showed negative returns last month as expectations of sessment of Spain's and Porhigher US interest rates tugal's economic fundamenincreased," said Mr José Luis Alzola, an economist at Salomon Brothers. Further falls were prompted by renewed fears that this was only the first step in a series

of interest rate rises. "The markets are worried that we are moving towards a higher yield environment," said Mr Adam Chester, bond strategist at Yamaichi International. Economists say the market is already focusing on the next meeting of the Federal Reserve's open market committee on May 20.

Compared with a month Fed will tighten again have risen dramatically, casting a long shadow over European the grip of the US," Mr Ches-

months. This would undoubtedly have knock-on effects on Europe's core economies, although the continued appreciation of the dollar should temper some of

Furthermore, a stronger dollar is particularly favourable to the high-yielding markets as it boosts their exchange rates against the D-Mark. Spanish and Portuguese bonds' good performance last month was also underpinned by better than expected economic data.

"There was a partial reas tals, which were boosted by favourable inflation data," said one economist.

However, Italy was the exception among Europe's so-called "peripheral" markets. In the past month the yield on the 10-year benchmark Italian government bond rose by 50 basis points to 7.80 per cent. Also, in a reflection of investors' waning confidence, the country's chances of joining the single currency fell just below 50 per cent, according to J.P. Morgan's Emu calculator. This measures forward earlier, expectations that the markets' expectations of interest rate convergence

between candidates for Emu. Disappointment with the outcome of Italy's longawaited mini-budget introduced further doubts about its ability to overcome that US futures markets are domestic opposition to fiscal pricing in rate rises of reform. Not only were the between 100 and 125 basis savings proposed (L15,500bn)

expected range, but economists criticised the measures for failing to initiate lasting structural reforms. "The mini-budget is nothing but a combination of fudges," said

one economist. Mr Sanjay Joshi, head of research at Daiwa Europe said: "Italy's mini-budget seems to be full of one-off measures and very little in the way of serious structural reform.

However, Italy's fiscal per-

formance remains on a long-term virtuous trend, even if few economists expect its budget deficit to fall to the government's target of 3 per cent of gross domestic product in 1997. This, and the continuing strong political commitment to Emu, will ensure that jitters over Italy's short-term prospects do not translate into dramatic volatility in its

bond markets. Stronger economic growth data for the first quarter in Italy and other European countries would help dispel some of the recent uncertainty in the markets. In addition, the expected net outflow of about \$80hn worth of Japanese portfolio investments this year, according to estimates by Daiwa, should provide fur-

worries," said Mr Joshi. "But

Toyota Wolor Casuli Corp

some will inevitably spill over into the European mar-

• More strong economic data led US Treasury prices lower at the long end of the maturity spectrum yesterday, while shorter-term government debt was flat to modestly higher, writes Lisa Bransten in New York.

In late morning trading the benchmark 30-year Treasury was & weaker at 94& to yield 7.093 per cent, while the two-year note rose is to 99%, yielding 6.419 per cent. The June 30-year bond future was unchanged at

Stronger than expected figures on February personal income and expenditure caused concern on Wall Street that the Federal Reserve would continue raising interest rates. Economists are divided

about whether last week's rate rise would be a one-off attempt to slow the economy or would lead to a series of increases. With each piece of strong economic news, however, the consensus has grown that there are likely to be more monetary tightenings in the near term.

A second day of sharp losses on the US equity market did give some support to it was not enough to offset the market's generally negative tone, said Mr John Spinello, a government securities strategist Merrill Lynch.

EMERGING MARKETS By Kasra Nam

From boom to bust in Dhaka

Heads are expected to roll after the crash on the Dhaka stock exchange, following one of the world's best performances last year.

An investigation into the bull run and the subsequent crash last week named brokers, dealers, and listed companies, which allegedly

The government is now legal advice after a special cabinet meeting. This is a conspiracy against the free market economy." said Mr Imtiyaz Husain,

The investigation was carried out by a committee appointed by the regulatory Securities and Exchange Commission. As the report was handed over to the government on Thursday, hundreds of angry small investors in the once-flourishing kerb market outside the Dhaka exchange threatened a day of action. They locked the doors of the exchange with chains as they mounted a noisy demonstration against Mr Shah Kibria, finance minister.

He was however spared further abuse when word went around that the report blamed not the government but market players on the floor of the stock exchange.

For years Bangladesh's two stock exchanges, in Dhaka and in the southern port of Chittagong, failed to attract much interest. But soon after the June general elections a new rush started in the markets.

The Awami League government, which came to power after 21 years in opposition, committed itself to sweeping market reforms. It took a number of steps to attract foreign investment. including abolishing a oneyear lock-in for foreign hold-

ers of primary shares. Dhaka's all-share price index, which hovered around 1,000 in mid-June, Jumped to 3,627 in less than five months while the market's total value increased by nearly Tk200m (\$4.5bn).

A kerb market developed outside the exchange where thousands of traders held up share certificates for sale.

An estimated 300,000 small investors bought and sold shares on the kerb market at all times of the day and night - some using their entire savings and others borrowing money in the hope of a quick return.

But the bust arrived just as the boom had started fast. In spite of efforts by the SEC and the government to ensure a soft landing, the market plunged, taking the all-share index down to 1,027 last Tuesday. It then rose by 17.8 per cent over three s sions before giving back 5.2 per cent yesterday as small investors took profits. The market is also expensive compared with its neighbours, trading on a prospective p/e of 40, compared with 10 in Sri Lanka and India, and just eight for Pakistan.

Only two copies of the investigators' report, which runs to more than 100 pages, have been printed, to ensure maximum secrecy. And although the contents have not yet been published, leaks to the press have made clear that at least 20 members and dealers were named for alleged irregularities.

Some are accused of buying on the exchange floor and selling on the kerb, where the prices were nearly 20 per cent higher, while the bull run lasted. It is also

ka SE Alf-Share Index

alleged that bulk deals were done by a few big operators, but often the actual transactions were never completed within the stipulated time. Although the purchases were registered, no actual purchase took place ~ enabling the operators to increase the value of their stock holdings without buy-

ing and selling.

The committee of inquiry is reported to have proposed a package of reforms and urged that they are implemented immediately. It has suggested independent management for the Dhaka and Chittagong exchanges and be allowed to be dealers. However, the brokers have

what went wrong. There were too many people chasing too few shares, they say, adding that the government release shares in stateowned companies which had been earmarked for sale. They also say a decision to establish an auction system for bulk sales of shares only helped to push up the prices At the same time, circuit breakers which limited price rises and falls to 5 per cent. and later to 10 per cent, gave a false sense of security to many first-time investors.

Opinion is divided as to whether the government should release the report. Some analysts believe a delay would help spread rumours and panic genuine brokers and investors. Others believe the government should call a meeting of all major players to review the whole situation. They point out that computerised trading, due in September, will help to get rid of the kerb market and will make all deals instantly transparent.

"We should look at the whole thing as a learning process," said Mr Onu Jaigirdar of Premium Securities a corporate member of the said that brokers should not stock exchange. "Going around looking for a scapegoat is a negative and ignotheir own explanation for rant thing to be doing."

by heavy selling of real estate and bank shares in thin trading on the last day of Japan's 1996 business year, writes Gwen Robinson. The Nikkei 225 average fell off 1.28 at 263.91 186.32 to 18.003.40, after tum-

Gloom began to descend when the Reserve Bank compulsory superannuation. Then came a string of lacklustre profit results, the majority of which were far worse than analysts had the new government's pledge to hold a binding refbeen predicting. Most companies blamed the Reserve

attracted large-scale inflows of foreign capital and has pushed the exchange rate to seven-vear highs.

Less than impressive results were seen in virtually every sector of the economy and included the country's biggest company, Telecom, the four Fletcher stocks, Brierley Investments, Air New Zealand, the for-estry group Carter Holt Harvey, Wilson and Horton in brewery glant Lion Nathan.

Trading was tough on the domestic market in the six months to December 31 because of a slowdown in consumer spending which reflected wage restraint and continued high borrowing and mortgage costs. Latest statistics suggest that the slowdown is intensifying due erendum in September on Bank's high domestic inter- to the cancellation of a

est rate policy. This has promised round of tax cuts this year, while personal dness is rising.

Exporters are suffering from the strong New Zea-land dollar which has been described as overvalued by many observers, including the Reserve Bank governor Mr Don Brash. Most locally based agricul-

tural and manufacturing exporters are feeling the pinch, as are groups such as Lion Nathan and Air New Zealand which earn much of their profit from international operations and which suffer when these are converted back to the New Zealand currency.

Vulnerability to sentiment on Wall Street has also been reflected in highly volatile trading in shares such as Telecom, 88 per cent owned by American and other over-

a roller-coaster ride during mance of its Thistle Hotels February and March as it associate in the UK and sizeslipped from NZ\$7.60 to able paper profits from its NZ\$6.29 before picking up to NZ\$6.57 last Thursday.

Big sell orders from the US have been absorbed by the company's NZ\$1bn share buy-back programme. Investor confidence was shaken by a poorer than expected half-year result, signs of growing competition in the sector and the company's decision to quit a loss-making Australian subsid-

Other sizeable falls have been seen in Fletcher Challenge Energy and Fletcher Challenge Building.

Brierley investments has proved largely immune to the sell-down, trading largely unchanged at between NZ\$1.30 and NZ\$1.37. This has been due

investments in the Austra-Coles Myer and James Har

rices of many stocks appear to have stabi-lised over the past fortnight in spite of the volatility on Wall Street. Many brokers are arguing that yields have now fallen to a level where prices appear ressonably secure.

The poor immediate earnings outlook and recent rises in interest rates appear likely to continue to dampen sentiment, but, on a more positive note, there is a widespread view that the Kiwi dollar could drop sharply by mid-year which would boost the attractive-

Bombay plunges 8.3% as government hits crisis

ASIA PACIFIC

A political crisis dragged BOMBAY down 8.8 per cent as the 10-month-old administration of Prime Minister H.D. Deve Gowda faced a challenge for power from a former coalition partner. The Congress party withdrew its support for the government, accusing it of not going far enough to counter the Hindu nationalist Bhar-

The BSR-30 index dropped 302.64 to 3,360.89, its fourthlargest single-day fall ever. Analysts noted that the

crisis had erupted only days after the government raised international equity of more than \$500m in VSNL, the telecommunications company, and was bound to delay plans to sell equity in TOKYO was driven down

shares from Friday's 259m. Many foreign investors were absent for the Raster package contained no sur-

holidays in the US and Europe, while domestic tors were reluctant to take large positions on the last day of the business year. Further uncertainty stemmed from the government's planned announcement after the market closed of a series of measures to revive the property market and help banks and financial

institutions securitise real

estate collateral. Some investors were also waiting for the mid-week release of the Bank of Japan's widely watched "tankan" survey of business sentiment, expected to show slight improvements in earnings projections and capital investment plans.

Declines led advances 637 to 411, with 172 issues changed. The Topix index of all first-section stocks fell 5.45 to 1,373.26 and the capital-weighted Nikkel 300 was Real estate issues were

NOTICE TO BONDHOLDERS

Chia Hsin Cement Corporation (Incorporated as a company limited by shares in Taiwan, Republic of China)

US\$ 65,000,000

4 per cent. Bonds due 2002

This is to inform you that Bondholders may exercise their Conversion Rights commencing from May 9th, 1997. The Conversion Price is currently NT\$36.00.

Following an amendment to the Regulations Governing Securities Investment by Overseas Chinese & Foreign Nationals and Procedures for Remittance, a foreign investor holding overseas convertible bonds and intending to effect conversion shall appoint a local agent to handle, for and on behalf of the foreign investor, matters regarding conversion of the bonds into common shares (of Entitlement Certificates) of issuing companies.

Within five days after the Conversion Date, the Compa ent Certificates to the local agent de by the Bondholder. The English translation of the key provisions of Entitlement Certificates will be available at the office of the Conversion Agent. The Company will issue new Shares to replace Entitlement Certificates once a year. The Company has fixed the close of business on December 28th of each year as a consolidation date ("Compolidation Date"). After the Consolidation Date, the Company will proceed with necessary filing and registration for capital increase in order to issue new Shares in exchange for the Entitlement Certificates issued and outstanding on or before such Consolidation Date (including those for which Entitlement Certificates have not yet been issued, but have been registered in the shareholders' register of the Company, as

Boudholders should consult with their local agent regarding the opening of securities trading account and New Tawan dollar account for the settlement of securities transactions. Bondholders should also consult the terms and conditions regarding conversion contained in the Prospectus and Trust Deed should they wish to effect conversions.

The Financial Times plans to publish a Survey on

Hong Kong & China

on Monday, June 16

The handover of Hong Kong to China will be one of the most closely watched world events of 1997. This survey will examine how Hong Kong will embark upon its new future, how China will handle the challenge of taking responsibility for 6 million capitalist citizens, and how it marks the end of an empire for Britain.

For further information, please contact;

Jenny Middleton or Haj Haffejee on Tel: +44 171 873 3794/4784 Fax: +44 171 873 3204 Brigitte McAlinden or Liz Vaughan on Tel: 852 2905 5554/5555 Fax: +852 2537 1211

or your usual Financial Times representative

Russia-Belarus summit

Boris Yeltsin, the Russian president, welcomes his counterpart from Belarus, Alexander Lukashenko, at the Kremlin. The leaders will discuss closer integration of the neighbouring states. However, Mr Yeltsin fears the cost and Mr Lukashenko is unenthusiastic about abdicating his presidency. The summit takes place against a backdrop of pro-democracy protests in Minsk. Mr Lukashenko, whose tilt towards authoritarianism has been vociferously condemned by Washington, last week arrested political opponents and expelled a US diplomant. More surprisingly, Moscow also criticised Mr Lukashenko for cracking down on Russian journalists.

King Hussein visits Clinton

Jordan's King Hussein meets US President Bill Clinton in Washington to discuss the Middle East peace process. The king's visit follows a mission to the region by Dennis Ross, the US Middle East peace envoy, who last week met Israeli and Palestmian leaders in an attempt to jumpstart the peace talks, which have stalled since Israel began to build the Har Homa settlement in east Jerusalem.

Turkey opens gas bids

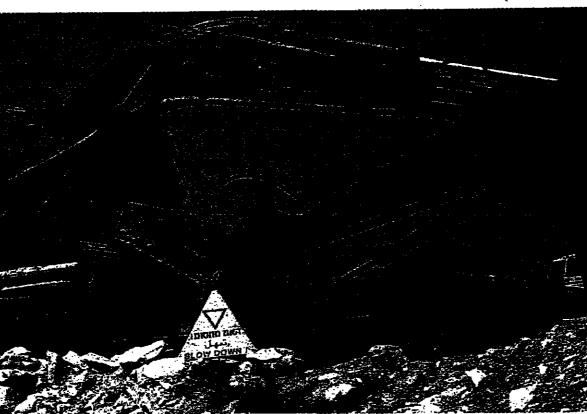

Bids for the construction of part of a gas opeline link with Iran are to be opened by Turkey. Last year, Ťurkey's **Talamist-led** government

signed a \$23bn (£14.4bn) natural gas import deal with Iran, in spite of US opposition. Turkey, which relies heavily on gas imports from Russia, will begin receiving 2bn cubic metres from late 1998. However, the two countries must first build a pipeline linking Tabriz in Iran with Erzerum and Ankara in Turkey.

India to free imports

A further liberalisation of India's import regime is to come into force. This will free the import of hundreds of consumer goods from a "negative list" of 3,000 items in the country's annual export-import policy review. The move follows strong pressure from trade partners at the World Trade Organisation for India to remove quantitative barriers to consumer goods imports. India has been resisting this on the grounds that it could expose it to a significant balance of

Japan's consumption tax, applied to everything from instant noodles to new houses, increases from 3 per cent to 5 per cent. Consumers appear to have been bringing forward their purchases of big items, such as cars, to beat the

A buildozer ready to demolish the home of a Palestinian suicide bomber after riots against a new Israeli settlement in east Jerusalem

tax increase. Economists will, therefore, be watching closely to see how damaging is the effect on consumer spending at a time of economic uncertainty. Meanwhile, Japanese pockets may gradually empty of flimsy aluminium Y1 coins, minted in huge quantities to cope with the awkward prices caused by the 3 per

WEDNESDAY

UK election manifestos

The UK general election campaign sees publication of the parties' manifestos, detailing their legislative plans in the event of victory on May 1. The Conservatives set the ball rolling, focusing on privatisation of pensions – as part of a radical social security review - and further education reforms while sounding tough on European monetary union. The Labour party follows on Thursday. Among its pledges are lower rates of income tax - for the first time - and a cut in health service waiting lists as well as moves to reduce youth and long-term unemployment by taxing profits of privatised utility companies. The Liberal Democrats launch their proposals on Friday.

Scots push independence The Scottish National party launches

its manifesto, too. The party says

Scotland would be better off as an independent country in the European Union. It would have 90 per cent of the UK's revenues from North Sea oil and be able to afford creating nearly 110,000 jobs over the first four years of independence. The SNP has to win 37 of the 72 Scottish seats to gain a mandate to negotiate independence. In 1992, it won three and gamed a fourth in the 1995 Perth and Kinross

Judges view Slovakia dam

Judges from the International Court of Justice at The Hague are expected to arrive in Hungary to view the effects of Slovakia's Gabcikovo dam on the Hungarian side of the River Danube. Hungary objects to Slovakia's diversion of water from the Danube to power a hydroelectric plant. Hungary and the former Czechoslovakia originally agreed to dam the Danube to make it more navigable, prevent flooding and generate electricity. However, Hungary eventually pulled out, and Slovakia unilaterally diverted the river postream from Hungary after the dam was completed. It will be the first time judges have left The Hague in the court's 50-year-history.

Chirac in Prague

ECONOMIC DIARY

Jacques Chirac, the French president, begins a two-day visit to the Czech Republic. He is to support Prague's efforts to join Nato and the EU. Although the two countries are not close - Paris pays more attention to Hungary and Romania ~ trade links are growing. Their business relationship has been awkward. An investment in Czech Airlines by Air France ended in controversy in 1994, while a proposed investment in a Czech | Chavalit Yongchaiyudh, the prime

oil refining venture by the oil company Total never got off the ground.

Japan ruling on shrine

The Japanese supreme court is to rule on whether public money contributed to the Yasukuni Shrine is unconstitutional. The Yasukuni

Shrine, a Shinto shrine in Tokyo that honours soldiers who died in battle, has long been a source of controversy between Japan and its former adversaries. Class A war criminals are among the war dead enshrined there. Recently, increasing numbers of politicians, including Ryutaro Hashimoto, the prime minister, have been making highly publicised and unapologetic visits there.

Tankan survey results

The Bank of Japan releases the main results of the Tankan, the quarterly survey of business confidence. Full details will be published on Thursday. The survey was due to be released in late February. The bank said the delay was part of an overall plan to improve the Tankan's efficiency and accuracy. Neverthless, the move aroused concern that the bank expected the survey to be so gloomy that it did not want to release it before the end of the financial year (Mar 31) for fear of depressing the stock market.

Thai PM visits China

Yongchaiyudh will be looking for increased co-operation in the agricultural and maritime sectors. He

is also expected to sign an agreement about Thailand's consular representation in Hong Kong after the British colony's return to China in July. Thailand is believed to be preparing to grant visa-free access to holders of Hong Kong passports.

FRIDAY

Apec meets in Cebu

Finance ministers from the 18 members of the Asia Pacific Economic Co-operation forum gather in the southern Philippine city of Cebu to discuss moves to improve privatesector participation in infrastructure projects and the development of financial and capital markets in the region (to Apr 6). The meeting follows the Apec summit in Manila last November, where a lack of concrete commitments to liberalising markets and opening up trade was evident. Finance ministers are expected to initial voluntary principles and initiatives, including the need to maintain a "sound macro-economic environment".

SUNDAY

Serbs vote on Croatia

The Serb regions of Eastern Slavonia, Baranja and West Srem vote in a referendum on whether they support their regions remaining as a whole territory after their reintegration into Croatia. The Serb-held enclave, under United Nations administration, votes in elections for municipal councils in Crostia and for its upper house of parliament on April 18.

Frei's party divided

In Chile, a divided Christian Democrat party elects a new president and three other members of the seven-strong executive. The vote is expected to be close. If the dissident wing of the party wins, it could mean trouble for the government of President Eduardo Frei. The president's brother, Francisco Frei. is a candidate on the official list. headed by Gutenberg Martinez. The dissidents, headed by former interior minister Enrique Krauss, say they want more democracy at the grassroots of the party. The outgoing party president, Alejandro Foxley, is a former finance minister with national presidential ambitions.

Other economic news

Tuesday: The key German data this week are manufacturing orders and industrial production for February, which should give an indication of the recovery. Manufacturing orders could be un by more than 7 per cent year on year after a rise of 4.6 per cent in January. Industrial production could be up between 6 and 7 per cent after 2 per cent previously. The February report of US

leading indicators could give further evidence of fast growth. The LEI index is expected to be around 2 per cent higher year on year after 2.5 per cent in January. Wednesday: A large gain by

non-durable goods should boost US factory orders for February by around 8 per cent year on year after 5.2 per cent in January Thursday: The March distributive trades survey by Britain's CBI is expected to

show rising retail sales volumes after a slowdown early in the year. Friday: The US employment report will be closely watched. The consensus forecast is for a jobless rate of 5.3 per cent, the same as
